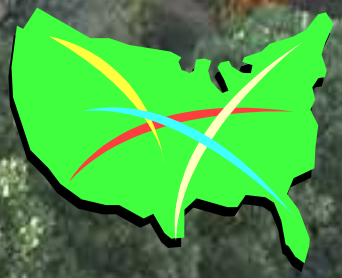
IASC Meeting 1/22-1/23/03 @ Rancho Cordova, CA

Big Picture of fuels management

Or at least a National Picture of Fuels, Taken primarily from DOI Direction, but National Fuels Conference in Denver 11/02 confirmed all land management agencies are being given the same general direction.



- Focus on WUI with 60% of Fuels $ FY03+
- FY03 target of 50% of WUI $ via Contract (FY04 50% of all Fuels $) with preference over doing work with contractors vs. the federal workforce.
- WUI projects should target the communities at greatest risk from wildland fire were the communities are actively involved ($), working with state & local partners.
- Non WUI treatments should focus on CC 2 & 3 in Fire Regimes I, II or III with highest risk reduction potential.
