Subject: Please strengthen and improve the Draft Scoping Plan Update
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Subject: Please strengthen and improve the Draft Scoping Plan Update
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Line: Please strengthen and improve the Draft Scoping Plan Update
Sample Public Comment:
I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.
Natural Gas is responsible for more Green House Gases than CO2 and it is creates more warming than CO2. Using it for any kind of a solution, is not a solution. Regenerative agriculture, composting and preservation of our intact forests can do amuch better job of sequestering Green House Gases.
Thank you for taking these comments seriously and amending your scoping plan.
Deirdre Fennessy

color: #1495d0; font-size: 11pt;"><em style="box-sizing:
border-box;">I am writing to urge you to strengthen and improve the
Draft 2022 Scoping Plan Update. Scientists have increasingly raised
the alarm that this decade is our last chance to make significant
and meaningful changes in our transportation, energy, building, and
other major infrastructure to prevent an irreversible climate
catastrophe, which is why I am disappointed that the Draft Scoping
Plan fails to accelerate the targets to reduce greenhouse gas
emissions to 40% below 1990 levels by 2030 or to achieve carbon
neutrality no earlier than 2045. It is simply not good enough to
meet the urgency of the climate crisis and the desperate need for
bold actions. CARB must achieve a more ambitious Scoping Plan that
leads to an accelerated pathway to carbon neutrality so that the
state&rsquo;s 40 million residents and future generations of
Californians can live in and thrive in a cleaner and healthier
environment.</em></span></p>
<p style="box-sizing: border-box; margin: 0px 0px 1em; color:

background-color: #fafbff;"><span style="box-sizing: border-box;
color: #1495d0; font-size: 11pt;"><em style="box-sizing:
border-box;">I strongly urge the California Air Resources Board to
adopt a more ambitious plan on how our state will combat the most
catastrophic impacts of climate change in the crucial years ahead.
To accomplish this, CARB must improve the Draft Scoping Plan by
accelerating a phase-out of oil and gas extraction and oil
refining; not making any more investment in fossil fuel
infrastructure; eliminating or significantly reducing our reliance
on unproven and costly technologies to prolong polluting fuel
sources; pursuing more robust transportation sector targets; and
decarbonizing buildings. The escalating climate crisis demands that
CARB adopts a more ambitious Scoping Plan, one with the vision and
conviction to provide the solutions that are needed to overcome the
crisis that we face. Thank you for your
consideration.</em></span></p>

Are you kidding me? Whose side are you on?!?! This draft is woefully inadequate!!! It will never meet our goals in time!!! We will be dead and burned up by then. Scientists say that by 2027, the CA Central valley will be a dust bowl. We need to STOP ALL oil and gas drilling NOW, not by 2045. Do your job!!!

Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Subject: Strengthening and modifying the Scoping Plan
Comment:

```
<p>It is significant that CA has outlined a serious plan to reach
carbon neutrality by 2045. However, it could be more efficient and
faster to be more optimistic about the prospects for renewable
electricity generation and storage (so, phasing out oil and natural
gas faster, and investing that money in renewable technology. It
would also be advantageous to be less optimistic about carbon
capture technologies, and modifying the carbon drawdown plans to
rely more on better-proven methods like soil regeneration and
cultivating carbon-intensive plant life. <br /><br /></p>
<p>The reason for this selective optimism and pessimism is less
about the probability of success (though this alternative
investment strategy is certainly realistic) and more about
mitigating the effects if a certain technology or social change
doesn't pan out. If the current plan fails, say if carbon capture
never effectively works, we have nothing to show for it. While if
solar energy storage fails us, we will simply need to adopt less
energy-intensive lifestyles. <br /><br /></p>
<p>Thank you for your consideration. </p>
<p>Clayton Strawn </p>

Subject: Please Strengthen the 2022 Climate Change Scoping Plan
Comment:

```
<p>The 2022 Scoping Plan for Climate Change needs to go father and
do more to protect California's future.</p>
<p>The state needs to <strong>invest more in renewables and
storage</strong>. We shouldn't be expanding fossil fuels like
natural gas, and spending millions on unproven technology like
carbon capture. <strong>Reforestation, composting and soil
regeneration</strong> are proven to reduce greenhouse gas
emissions. Let's fund them instead. We must focus more on<strong>
further reducing carbon emissions in transportation and housing.
</strong></p>
<p>California needs real change to meet the challenge of climate
change. The steps to make these changes might seen scary, but they
aren't as frighting as climate disaster.</p>
```

Subject: 2022 Scoping plan has some wrong ideas
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
Two parts in particular lead in the wrong direction of expanding use of fossil fuels. 1) Expanding LNG will lead to more CO2 by combustion, and more methane will be inevitably released. To say that LNG will fill the near-time energy gap, also carries with that these facilities will become stranded assets. 2) To plan that Direct Carbon Capture technology will be able to remove 110 MMT of CO2 by 2045 is wishful thinking with no present evidence to support it.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. Subject: Please strengthen and improve the Draft Scoping Plan Update
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030, and doesn't plan to reach carbon neutrality earlier than 2045. It is insufficient to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must create a more ambitious Scoping Plan that accelerates the pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. Our climate crisis is intensifying rapidly, and demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration and for your service to the public.

Subject: On The Strengthening of the CARB standard
Comment:

```
<p style="margin: 1em 0px; color: #505050; font-family: Arial;
font-size: 14px; background-color: #ffffff;">As a concerned citizen
of these United States, I have my following concerns about the
proposed CARB Draft Scoping plan. The chief of them are below:</p>
<p style="margin: 1em 0px; color: #505050; font-family: Arial;
font-size: 14px; background-color: #ffffff;"> </p>
<p style="margin: 1em 0px; color: #505050; font-family: Arial;
font-size: 14px; background-color: #ffffff;">1.  
  <strong>The draft plan does not demonstrate that
California is on track to even meet the legally mandated goal of at
least a 40% reduction in greenhouse gases by 2030.<a style="color:
#222222;"><strong>[2]</strong></a></strong> Short-lived
climate pollutants are particularly unlikely to achieve a 40%
reduction.</p>
<p style="margin: 1em 0px; color: #505050; font-family: Arial;
font-size: 14px; background-color: #ffffff;">2.  
  <strong>The draft plan does not follow AB 32&rsquo;s
requirement that California achieve &ldquo;the maximum
technologically feasible&rdquo; emission reductions, using the most
cost-effective methods.<strong><a style="color:
#222222;">[3]</a> </strong></strong>&ldquo;Air board officials
said they will propose the option that has the least impact on the
economy rather than accelerating the pace of achieving carbon
neutrality.&rdquo;<a style="color: #222222;">[1]</a></p>
<div style="color: #505050; font-family: Arial; font-size: 14px;
background-color: #ffffff;"> </div>
<h5 style="color: #404040; font-family: Arial; background-color:
#ffffff;">Scientific Issues</h5>
<p style="margin: 1em 0px; color: #505050; font-family: Arial;
font-size: 14px; background-color: #ffffff;">1.  
  <strong>The draft plan will not keep global
temperatures close to what scientists say will avoid
catastrophe.</strong> The world has only ten years to cut
greenhouse gas emissions by 50% if we are to attain the goal.
President Biden has committed the United States to a 50% reduction
by 2030. Yet the draft plan may not achieve even 40% by 2030.</p>
<p style="margin: 1em 0px; color: #505050; font-family: Arial;
font-size: 14px; background-color: #ffffff;"><strong>2.  
  </strong><strong>The science of climate change requires
front-loading our response.</strong> &ldquo;If mitigation
pathways are not rapidly activated, much more expensive and complex
adaptation measures will have to be taken to avoid the impacts of
higher levels of global warming on the Earth system.&rdquo;<a
style="color: #222222;">[4]</a></p>
<p style="margin: 1em 0px; color: #505050; font-family: Arial;
```

font-size: 14px; background-color: #ffffff;">3.
  California’s goal should be at least an 80% reduction in emissions by 2030. A former coordinating author of the Intergovernmental Panel on Climate Change and Professor of Sustainability at UC Berkeley, Daniel Kammen, Ph.D., set out a scientifically backed and feasible program for California in 2021. It calls for an 80% reduction in emissions by 2030.[5]
4.
  The draft plan only aims for an 80% reduction emissions by 2045. The draft plan’s reliance on carbon capture and sequestration (CCS) or direct carbon capture (DAC) to balance 20% of our emissions is more than New York (15%) and far more than the State of Washington (5%).[6]
5.
  Neither CCS nor DAC should be counted on as scalable. The March 28,2022 IPCC report on the capacity of different actions to reduce greenhouse gases puts CCS as the least effective and most expensive of the 43 climate actions the IPCC evaluated for deployment prior to 2030.[7]
<h5 style="color: #404040; font-family: Arial; background-color: #ffffff;">Environmental Justice Problems</h5>
1.
  The draft plan drags out elimination of pollution that disproportionately affects poor people and people of color. But rapid elimination of GHG pollution costs less than the health costs of continuing pollution.^{^[8]}
2.
  The Environmental Justice Advisory Council (EJAC), which advises the CARB Board, has demanded faster and more comprehensive measures than in the draft plan so as to protect disadvantaged communities, particularly those suffering from air pollution.[9]
<h5 style="color: #404040; font-family: Arial; background-color: #ffffff;">Short-lived Climate Pollutants (SLCPs)</h5>
1.
  The draft scoping plan recognizes the importance of SLCP abatement but not the importance of moving very quickly.[10]
2.
  Reduction of emissions from HFC refrigerants having thousands of times more warming effect than carbon dioxide must be greatly accelerated.[11]
3.
  The draft plan expects to reduce fugitive emissions of methane by 50%, but it needs to be higher in California to keep global warming to no more than 1.5°C.[12]
<h5 style="color: #404040; font-family: Arial; background-color: #ffffff;">Cap and Trade</h5>

1.   Highly reputable critics of the Cap and Trade program, a market-based carbon pricing method used in California, believe the program may not be able to achieve even its limited emission reduction goal by 2030.[13]
2.   As a market-based mechanism, the Cap and Trade program does not reduce major sources of pollution fast enough. CARB should consider replacing parts of it by direct regulation.[14]

The people of California and the world are watching what choice you make. Make sure it's the truly right one.

CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment

I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets, and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Subject: Strengthen and improve the Draft 2022 Scoping Plan Update
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.

Subject: You Need to Strengthen and Improve the Draft Scoping Plan Update.
Comment:

I'm sure it's useless to ask, but nonetheless I urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our very last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, and that is why I am disgusted to see that the Draft Scoping Plan refuses to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It simply is not good enough to meet the urgency of the climate crisis and the desperate need for bold action. CARB must, but I'm sure will refuse to, achieve a more ambitious Scoping Plan that could lead to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians could have lived and thriven in a cleaner and healthier environment.
I strongly, though futilely, urge the California Air Resources Board to adopt a more ambitious plan for how our state will combat the most catastrophic impacts of global warming ("climate change") in the crucial years ahead. To accomplish this, CARB must (but won't!) improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining, not making any further investment in fossil fuel infrastructure, eliminating our reliance on unproven and costly technologies to prolong polluting fuel sources, pursuing more robust transportation sector targets, and decarbonizing buildings. The rapidly escalating climate crisis demands that CARB adopt a truly ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis we face.
<span

```
style="line-height: 21px; font-size: 14px;"><em>I would t hank you
for your consideration if I honestly believed that you would
consider this plea.</em></span></span></p>

Subject: Please strengthen and improve the Draft Scoping Plan Update
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; decarbonizing buildings; strictly regulating the animal agriculture industry to reduce its carbon, methane, and nitrous oxide production; subsidizing the production of fruits and vegetables to make environmental eating more affordable; and encouraging Californians to massively reduce their meat. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. As a physician who practiced for 36 yrs in San Francisco, I am alarmed at the health hazards that have resulted from climate change. As the IPCC stated we are now in a "Code Red for Humanity." Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.

Time is of the essence, Diana. We are in the final few years that remain to tackle the climate crisis and create a more just and vibrant future for California.
Because it’s a wide-ranging, multi-agency effort that touches all sectors of the state’s economy and that agencies and legislators alike follow, the Scoping Plan is a critical document for California to make significant and meaningful changes in order to combat the climate crisis.

Subject: Please strengthen and improve the Draft Scoping Plan Update
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.

I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Subject: Please strengthen the Draft Scoping Plan Update
Comment:

I'm a retired mom and future grandparent writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have repeatedly told us that this decade is our last chance to make significant and meaningful changes in our infrastructure, including transportation, energy, building, and other components to prevent an irreversible climate catastrophe. I'm disappointed that the Draft Scoping Plan does not include accelerated targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. CARB must step up and meet the urgency of the climate crisis and our desperate need for bold actions. CARB must develop a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
The California Air Resources Board must adopt a more ambitious plan on how we will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. The resdients of our state and future generations are depending on your bold, thoughtful action! Thank you for your consideration.

Subject: “Please strengthen and improve the Draft Scoping Plan Update
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Typewriter; font-size: medium;">My family and I strongly urge the
California Air Resources Board to adopt a more ambitious plan on
how our state will combat the most catastrophic impacts of climate
change in the crucial years ahead. To accomplish this, CARB must
improve the Draft Scoping Plan by accelerating a phase-out of oil
and gas extraction and oil refining; not making any more investment
in fossil fuel infrastructure; eliminating or significantly
reducing our reliance on unproven and costly technologies to
```

prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face.

Please realize you are deciding the future and amount of healthy living or suffering it will entail for tens of thousands of our younger generations that will not have any opportunity to correct or reverse any limited climate action decisions made today. Your visionary, big picture thinking CARB decisions will decide the future for all our families, yours and mine, long after we will be gone and no longer here to protect them or see them thrive or suffer. Such a huge responsibility falls to you and it cannot be easy. If we cannot do what is necessary to change the direction of future worsening climate catastrophes in California, my family and I see little future hope, even if American democracy does survive its current peril. Please, my family and I ask you with urgent sincerity, to take bolder actions and accelerate the targets to reduce greenhouse gas emissions and achieve carbon neutrality sooner as is needed and implored for by all legitimate scientists worldwide.

My family and I write this to you in earnest, recognizing that your position of power and responsibility at this time is not easy but critical and we sincerely thank you for your consideration.

JK & Family,
Anaheim, CA

Subject: It is existentially critical to strengthen and improve the Draft Scoping Plan Update
Comment:

Even though I've only got time to submit a pre-written message about this (below), I cannot stress how deeply I care about this and about taking every single opportunity we have to act in BIG, BOLD, and IMMEDIATE ways for our survival.
I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. 0.25); clear: both; margin: 0px 0px 12px; line-height: 24px; border-color: #222222; color: #222222;">I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.</p>

Comment:

```
<p style="line-height: 22.0pt; mso-line-height-rule: exactly;
background: white; margin: 0in 0in 9.0pt 0in;"><em><span
style="font-size: 16.0pt; font-family: 'Footlight MT
Light','serif'; mso-bidi-font-family: Arial; font-style: normal;
mso-bidi-font-style: italic;">I urge you to adopt a more ambitious
Draft 2022 Scoping Plan Update for our state to combat the most
catastrophic impacts of climate change in the crucial years ahead.
The Scoping Plan must accelerate a phase-out of oil and gas
extraction and oil refining; stop fossil fuel infrastructure
investment; eliminate or significantly reduce our reliance on
unproven and costly technologies to prolong polluting fuel sources;
pursue more robust transportation sector targets; and de-carbonize
buildings. The escalating climate crisis demands a more ambitious
Scoping Plan, one with the vision and conviction to provide the
solutions needed to overcome the crisis that we face.

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.

I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Subject: Kindly consider improving and strengthening the current Scoping Plan Update Draft
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update.

Since scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, that alone is a major reason why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. What the Draft proposes is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious and effective Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.

I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating and focusing on the following: a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Subject: Please strengthen the Draft 2022 Climate Change Scoping Plan
Comment:

```
<blockquote>
<p style="clear: both; margin: 0 0 12px 0; line-height: 150%;">We
are running out of time on climate change. Our climate change plan
therefore needs to be much stronger if we are to afford a decent
future for our grandchildren.  I urge you to strengthen and
improve the Draft 2022 Scoping Plan update. This decade represents
our last chance to make meaningful changes in transportation,
energy, building, and other major infrastructure. The current Draft
Scoping Plan compromises these changes to the level where
California will not do enough to prevent an irreversible climate
catastrophe. As a grandmother, I strongly urge you to do more. We
NEED to achieve carbon neutrality by 2030.</p>
<p style="clear: both; margin: 0 0 12px 0; line-height:
150%;">Please, for the sake of our children and grandchildren,
accelerate the phase-out of oil and gas extraction and oil
refining. Put an end to any additional investment in fossil fuel
infrastructure, redirect money that is targeted at prolonging
current fossile fuel sources into improvements in transportation
and building infrastructure that reduce, or better still, eliminate
the need for such fuels. We need a stronger, more ambitious scoping
plan if we are to ensure any kind of reasonable future for the next
generations. Thank you for your consideration.</p>
</blockquote>

Subject: Please strengthen and improve the Draft 2022 Scoping Plan Update
Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update, which is way too weak as currently written. Drastic action, not timid steps, is needed. In fact, this draft is so timid, it doesn't even SOUND like it was written by Californians. California is in most ways on the leading edge of addressing transportation, energy, building and other major infrastructure changes to prevent irreversible climate catastrophe, which is one reason why this 2022 Draft Scoping Plan Update reads as though it has been hijacked by Big Business. I am really disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 and fails to achieve carbon neutrality before 2045. It is simply not good enough as currently written to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment, not to mention stop having to live in fear of year-round wildfires, that we now know are an indirect result of the climate crisis.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how California will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure (and that includes stopping the construction of NEW gas stations); eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands

that CARB adopt a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.</p>

Subject: Please strengthen and improve the Draft Scoping Plan Update
Comment:

I urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. That is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.

I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Subject: The Draft 2022 Climate Change Scoping Plan
Comment:

Dear Board Members:
I strongly urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Thousands of climate cientists have increasingly and loudly raised the alarm that only a few years remain for us to make significant and meaningful changes in our society, including transportation, energy, agriculture, building, and other major areas of industry and infrastructure to prevent an irreversible climate catastrophe. That is right - an irreversible climate catastrophe! With the stakes this high, I am very disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 (or earlier) or to achieve carbon neutrality no earlier than 2045. These targets are simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must put forward and achieve a more ambitious Scoping Plan that accelerates the pathway to carbon neutrality! This is required if we want the state’s 40 million residents and future generations of Californians to live in and thrive in a cleaner and healthier environment. The window of opportunity is quickly closing!
I strongly urge the California Air Resources Board to adopt a more ambitious plan for how our state will combat the most catastrophic impacts of climate change in the crucial few years ahead. To accomplish this, CARB must greatly improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; by not making any more investment in fossil fuel infrastructure; by eliminating or significantly reducing our reliance on unproven and costly technologies such as carbon capture to prolong polluting fuel sources; by pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that

CARB adopts a Scoping Plan in line with the urgency of our climate situation, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face within the next decade. Thank you for your consideration.
Most sincerely,
Ward Hinds MD, MPH

Comment:

I am writing to urge you to strengthen the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our major infrastructure to prevent an irreversible climate catastrophe. I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the accelerating climate crisis. One need only monitor the current world-wide climante changes taking place today to realize the urgency. Previous timeline forecasts have all proven to be too optimistic.
I urge CARB to adopt a more ambitious plan by accelerating a phase-out of oil and gas extraction and oil refining; reducing or eliminating additional investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

baseline; color: inherit;"><em>I am writing to urge you to
strengthen and improve the Draft 2022 Scoping Plan Update.
Scientists have increasingly raised the alarm that this decade is
our last chance to make significant and meaningful changes in our
transportation, energy, building, and other major infrastructure to
prevent an irreversible climate catastrophe, which is why I am
disappointed that the Draft Scoping Plan fails to accelerate the
targets to reduce greenhouse gas emissions to 40% below 1990 levels
by 2030 or to achieve carbon neutrality no earlier than 2045. It is
simply not good enough to meet the urgency of the climate crisis
and the desperate need for bold actions. CARB must achieve a more
ambitious Scoping Plan that leads to an accelerated pathway to
carbon neutrality so that the state&rsquo;s 40 million residents
and future generations of Californians can live in and thrive in a
cleaner and healthier environment.</em></span></span></p>

Subject: Draft Scopping Plan
Comment:

I am a person with asthma acquired from living in Los Angeles in the 50's and 60's before the EPA, when the sun rose like a red rubber ball through the pollution, and when they were using rocket fuel for testing Atlas rockets so close, my whole house shook. I would ride on my girlfriend's horse to Aliso Canyon and back before the 118 freeway was built. Now I am just getting over pneumonia, so I urge you to strengthen and improve the Draft 2022 Scoping Plan Update to improve air quality. In addition, Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment. Scientists also indicate if we don't lower Greenhouse Gas emissions enough we could be facing up to a 50% extinction of all the species on earth from global warming. This is a horrifying thought and we could be among that 50%.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

Comment:

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality by 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.

I urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; ceasing all investment in fossil fuel infrastructure; eliminating our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings.
The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

100%; line-height: 150%;">Our politicians and, actually, a large percentage of Americans, couldn't wrap their minds around the reality of a rapidly changing climate in the 1980s, when it became abundantly clear that we were heading into a truly existential climate crisis. We have no choice other than to act RIGHT NOW if we are going to avoid the worst of possibilities.
I have lived in California since 1946. (My father was mustered out of the U.S. Army in Stockton, CA in 1945.) As a result, California, for all intents and purposes, I have lived the majority of my life in California and experienced the best of California as a child.
I want a safe and productive life for my grandsons and for all other children who will be faced with the increasing challenges as climate change continues. I am hopeful that we can achieve the necessary goals to keep from losing humans, mammals, aquatic animals and birds to an unliveable planet!
Thank you for your consideration.

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update.
The window to prevent the worst impacts of the climate crisis is closing fast. The climate crisis is severe but it is not hopeless. Every bit of action counts. Please, please do whatever you can.
CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face.
Thank you for your work. It is so important that we work together to help our climate.

<p style="clear: both; margin: 0px 0px 12px; line-height:
24px;">Time is of the essence, c. We are in the final few years
that remain to tackle the climate crisis and create a more just and
vibrant future for California.
<p style="clear: both; margin: 0px 0px 12px; line-height:
24px;">Because it’s a wide-ranging, multi-agency effort that
touches all sectors of the state’s economy and that agencies
and legislators alike follow, the Scoping Plan is a
critical document for California to make significant and meaningful
changes in order to combat the climate crisis.
<p style="clear: both; margin: 0px 0px 12px; line-height:
24px;">Right now, there are only a few hundred public comments
up on <a style="color: #0874c8; overflow-wrap: break-word;"
href="https://default.salsalabs.org/Td9b309d0-483d-4938-af5a-

Form Letter 239 for Comment 274 for 2022 Climate Change Scoping Plan (scopingplan2022) - Non-Reg.

First Name: Narayan
Last Name: Gopinathan
Email Address: narayansgopi@gmail.com
Affiliation: UCLA

Subject: Strengthen Scoping Plan by accelerating ICE phaseout
Comment:

```
<p>Dear CARB,</p>
<p>As a young Californian, who studies climate change policies and
solutions, I would strongly encourage you to accelerate the
phaseout of combustion vehicle sales. We cannot afford to allow
continued sales of gas cars through 2035. Every gas car sold will
lock in dependency on fossil fuels, and create emissions for years
if not decades after the sale. Any car sold in 2035 could be on the
road for more than a decade, and so allowing sale of gas cars in
2035 will make it near impossible to meet our deadline of carbon
neutrality by 2045.</p>
<p>Furthermore, allowing sale of gas cars will strengthen dictators
like Putin and MBS, who thrive off of oil revenues. Every gas car
sold harms our national security, by enabling dictators to profit
from oil sales. </p>
<p>For that reason, we must move up our phaseout date to 2030, if
not earlier. The state of Washington is phasing out sales of gas
cars by 2030. We can do that too. We must pair a phaseout of gas
cars with increased investment in EV charging infrastructure and
public transportation, including regional rail and bus services,
and expansion of light rail and metro services within our
cities. </p>
<p>Best regards,</p>
<p>Narayan Gopinathan</p>
```

Subject: Please strengthen and improve the Draft Scoping Plan Update
Comment:

<blockquote>
I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.

I am writing to urge you to strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that this decade is our last chance to make significant and meaningful changes in our transportation, energy, building, and other major infrastructure to prevent an irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030 or to achieve carbon neutrality no earlier than 2045. It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.
I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration

Subject: The 'Draft Scoping Plan Update' MUST Be Stronger!
Comment:

Hello, I am writing today to urge you to vastly strengthen and improve the Draft 2022 Scoping Plan Update. Scientists have increasingly raised the alarm that RIGHT NOW is our last chance to make significant and meaningful changes in transportation, energy, building, and other major infrastructure to prevent irreversible climate catastrophe, which is why I am disappointed that the Draft Scoping Plan utterly fails to accelerate the targets to reduce greenhouse gas emissions to 40% below 1990 levels by 2030, or to achieve carbon neutrality no earlier than 2045. It is very simply not good enough to meet the urgency of the climate crisis and the undeniable need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutraulity so that California’s 40 million residents and future generations of Californians can live in, and thrive in, a cleaner and healthier environment.
PLEASE, I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a complete phase-out of oil and gas extraction and oil refining; NOT making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings now. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face.

Thank you for your time, work, and consideration. Please do not fail us now.

It is simply not good enough to meet the urgency of the climate crisis and the desperate need for bold actions. CARB must achieve a more ambitious Scoping Plan that leads to an accelerated pathway to carbon neutrality so that the state’s 40 million residents and future generations of Californians can live in and thrive in a cleaner and healthier environment.</p>
<p style="box-sizing: content-box; margin: 0px 0px 12px; line-height: 19.5px; font-family: OpenSans, 'Helvetica Neue', Helvetica, Arial, sans-serif; font-size: 13px; color: #555555; background-color: #ffffff; clear: both;">I strongly urge the California Air Resources Board to adopt a more ambitious plan on how our state will combat the most catastrophic impacts of climate change in the crucial years ahead. To accomplish this, CARB must improve the Draft Scoping Plan by accelerating a phase-out of oil and gas extraction and oil refining; not making any more investment in fossil fuel infrastructure; eliminating or significantly reducing our reliance on unproven and costly technologies to prolong polluting fuel sources; pursuing more robust transportation sector targets; and decarbonizing buildings. The escalating climate crisis demands that CARB adopts a more ambitious Scoping Plan, one with the vision and conviction to provide the solutions that are needed to overcome the crisis that we face. Thank you for your consideration.</p>

style="line-height: 150%; font-size: 14px;"><em>I am writing to
urge you to strengthen and improve the Draft 2022 Scoping Plan
Update. Scientists have increasingly raised the alarm that this
decade is our last chance to make significant and meaningful
changes in our transportation, energy, building, and other major
infrastructure to prevent an irreversible climate catastrophe,
which is why I am disappointed that the Draft Scoping Plan fails to
accelerate the targets to reduce greenhouse gas emissions to 40%
below 1990 levels by 2030 or to achieve carbon neutrality no
earlier than 2045. It is simply not good enough to meet the urgency
of the climate crisis and the desperate need for bold actions. CARB
must achieve a more ambitious Scoping Plan that leads to an
accelerated pathway to carbon neutrality so that the state&rsquo;s
40 million residents and future generations of Californians can
live in and thrive in a cleaner and healthier
environment.</em></span></span></p>
