Pacific, MO 63069

#92-29

Dear Mr. Sutcliffe:

Certification of New Process for Husky V Nozzle Bellows Assembly

You requested California Air Resources Board (CARB) certification of a new manufacturing process for the Certified Husky V nozzle bellows and face plate assembly. Husky states that the new bellows and face plate materials remain the same chemical formulation and only the process was changed to increase fill pipe compatibility and durability. Testing was conducted by the California Air Resources Board (CARB) and the test results demonstrated the new process will not adversely affect the performance of the Husky V Phase II vapor recovery nozzles on which the new bellows and face plate assemblies will be installed.

As required by the Air Resources Board certification procedures, you requested the approval of the Division of Occupational Safety and Health, the Office of the State Fire Marshal and the Department of Food and Agriculture, Division of Measurement Standards. The necessary approvals have been obtained from these agencies.

I find that the new process for the Husky V bellows and face plate assembly will not adversely affect vapor recovery systems on which they may be installed. If you have any questions, please call Laura McKinney at (916) 327-1525.

Sincerely,

James J. Morgester, Chief
Compliance Division
