Reduction Targets SB 375 (2010sb375) - Non-Reg.**

First Name: Mark

Last Name: Santarelli

Email Address: mark.santarelli@sbcglobal.net

Affiliation: 3233779072

Subject: GHG emission reduction targets of SB 375

Comment:

I thank you at CARB for taking the lead in the implementation of SB 375.

I ask you at CARB to consider voting to adopt greenhouse gas (GHG) emission reduction targets as part of SB 375.

I also encourage you at CARB to take the most aggressive yet achievable GHG emission reduction targets.
Affordable housing, close schools and work, plus reliable and safe alternative transportation choices are the best way to have clean air for ourselves and our children.
Sincerely,

Mark Santarelli

Comment:

Dear Air Resources Board Members,

I am a long-term resident of California and have always known that this state could do better for its residents in the areas of planning and transportation. I believe that this is a critical time for setting strong and achievable green house gas targets that will make this lovely state a healthier place to live.

Please vote for the strongest achievable targets and the best community planning aids possible at your September meeting.

Thank you,

Marilyn van Oppen

Subject: Please set high GHG reduction targets

Comment:

Dear Chairwoman Nichols and CARB members:

I encourage you to adopt the strongest possible greenhouse gas (ghg) emission reduction targets under SB 375. GHG targets that fail to achieve the emission reduction targets under Executive Order S-3-05 or do not substantially reduce overall ghg emissions will do a disservice to Californians.

Please adopt ambitious ghg reduction targets to help California lead the nation in sustainable development, not sprawl.

Sincerely,
Jonathan Evans
Oakland, CA

Form Letter 7 for Comment 38 for Regional Greenhouse Gas Emission Reduction Targets SB 375 (2010sb375) - Non-Reg.

First Name: Kenneth
Last Name: Manning
Email Address: ken@radiantinc.com
Affiliation: concerned citizen, cyclist

Subject: Please adopt greenhouse gas (GHG) emission reduction targets
Comment:

I'm writing to strongly urge you to vote on September 23rd to adopt greenhouse gas (GHG) emission reduction targets. SB 375 was passed in 2008 with the goal of reducing GHG emission from vehicles and light trucks, and we need to continue to act toward these goals. California needs to lead the way in this fight, since it is clear the Fed isn't going to act in any meaningful manner.

Also, I want to stress that we need affordable housing close to work, schools and other community amenities and real alternative transportation choices to support and augment these targets.

Thanks,
Ken Manning

Comment:

I support the proposed reduction targets (Adoption of Proposed Regional Greenhouse Gas Emission Reduction Targets for Automobiles and Light Trucks Pursuant to Senate Bill 375). California has led the nation in reducing greenhouse gases, but we are far behind where we should be, thanks to years of politicians who told us there was no hurry, that we would never have to make sacrifices. It's time to get serious about cleaning up the pollution that we have created.

Thank you.

Comment:

Dear Chair Nichols and Air Resource Board Members,

I urge you to adopt GHG emission reduction targets that are ambitious and achievable. As a car driver and public transportation user, I am hopeful that my community will benefit from planning with the environment in mind. I would prefer to use my car less, with more emphasis on safe biking and walking options.

Likewise, public transportation could be a more viable solution with the right incentives for Californians.

Thank you for prioritizing this important environmental issue.

Regards,

Michele Walsh

Subject: The need for change - adopt strong standards

Comment:

I strongly urge you to vote for ambitious green house gas reduction targets. We need to accelerate the change process - not be afraid of it. We need to build a sustainable transportation system, and more walkable and bike-able mass transit communities. These are challenging changes, but ones that we can achieve - California is the most creative economy on the planet - and we can do well by making these changes and revitalizing our economy through doing so.

Once again, I strongly urge you to be robust in your enforcement of SB375 - let's take a big step forward in reducing green house gases. We need to do this, we can do this, if you are willing to lead.

Subject: SB 375 GHG emission targets
Comment:

Thank you for all of your hard work on the implimentation of SB 375. With enforcement, we could see a reduction in Green House gases as well as more sustainable communities and transportation choices.

I urge you do adopt only GHG emissson targets that are ambitious but achievable, so that we may see more compact community planning and cleaner air for those who follow us. We owe it to them to leave a planet that is better than when we found it; a society better and more communal and more intelligent. To do so we need more affordable public transportation closer to our schools and work. In short, planning from the ground up.

It starts with achievable GHG emission standards and sustainable community standards.

Thank you again for all of your hard work.

Reduction of greenhouse gases can only be done incrementally Here is an opportunity to take significant steps, starting with these emission reduction targets for cars and light trucks. These vehicles total in the many millions in this country, therefore the benefit would be substantial. In light of the overwhelming evidence for serious climate change, and the discreditation of the well funded opposition to the evidence, it is time to implement these targets.

The strictest limits must be set for all vehicles on green house gas emissions. We all have the option 90% of the time to use public transit. Eliminating free parking by landlords, merchants, schools, and employers will do much to discourage driving. If one chooses to drive they cannot be allowed to damage the atmosphere.

I would urge you to consider a range of greenhouse gas emission reduction targets for cars and light trucks. I was born in Los Angeles and have lived here my entire life. When I was a child I remember how clear the air was and how much better the quality of life was before there were so many freeways, cars, trucks, and smog.

Years ago, I remember days when the smog was so thick it was difficult to play sports outside, and I couldn't see mountains that were 100 miles away.

Now that I'm in my sixties, I believe we have an opportunity to be a leader in adopting new technologies that will once again make Los Angeles one of the most desirable cities in the world for my son and his children.

Subject: Senate Bill 375

Comment:

We are fighting hard to elect a mayor with strong green values in November- reducing toxic emissions from the Port of Oakland that cause asthma in the children of West Oakland, among other endeavors. Please help us by retaining ambitious but necessary gas emission targets for autos and light trucks.

Thank you

Comment:

Encouraging people to take public transportation (building LIGHT RAIL), bicycle and walk will not only improve the environment. the air we breathe and reduce traffic congestion. It will make a huge improvement in people's health (they are exercising) and reduce obesity. This translates into huge savings in health care as well.

It just makes sense. Please adopt the Regional Greenhouse Gas Emission Targets! Thank you for your consideration.

Comment:

Dear Chair Nichols and Air Resource Board,

I believe that it is necessary to keep working to reduce GHG Emissions despite current economic conditions. I believe it is a despicable fraud perpetrated by narrow corporate energy interests to suggest that achievable reductions in GHG Emissions somehow correlate with a reduction in prosperity. It is, of course, just the opposite, and in this spirit I wish to thank you for the work you have already done in advancing the aims of sustainability (yes, life here should be sustainable), and I hope that you will adopt ambitious and achievable goals for the future. Thank you very much!

Comment:

As a physicist, I have followed the discussions about GHG and their effects on the environment well before the subject was discussed commonly. I have been frightened by the real risks that man-induced degradation of the environment will substantially reduce the lifestyles of the next generation. Major storms, floods, rising sea levels, droughts, etc. will impact the global capacity to produce food and provide for stable living environments.

Please adopt the most aggressive measures to reduce GHG emissions that can be achieved.

Thank you for your work in implementing SB 375. I hope you will vote for strong greenhouse gas emissions targets, and continue to support sustainable transportation and community planning.

The health benefits from cleaner air and increased opportunities to walk and bike are obvious. The quality of life improvement from reducing time spent in traffic - and the consequent stress - would be immeasurable. Most important of all, we will have reduced greenhouse gas emissions in order to protect ourselves from the ravages of climate change.

Thank you for securing these benefits for us.

Subject: Reduction of Greenhouse Gases

Comment:

Dear Chair Nichols and Air Resource Board Members,
Thank you for working towards a more sustainable future. I am undecided whether the activities of people are enough to enormously change the climate, but I am convinced that human-generated greenhouse gas (GHG) emissions do produce local hot spots and high pollution levels increase health problems for humans and the natural environment. I think that we will continue to see increasing levels of emphysema and exercise-induced asthma unless we can curb all GHG and particulate emissions.
I urge you to implement SB375 with confidence, knowing that you are making the world a better place. We need, here in California, the kind of urban planning common in Europe where public transportation is widely used. Having recently several weeks in Basel, Switzerland where there is not only excellent public transportation, bike paths and a major river (the Rhein) clean enough to swim in, I am convinced that when it comes to creating a clean, functional environment, "Where there's a will, there's a way".
Please have the will! (Present and future generations will be grateful.)
Best,
Mona Younes

I have been intentionally living Vehicle-free in Los Angeles for over a year now. I felt genuinely guilty contributing the the mess that is our air quality in this city, and welcomed the chance to experience more of the city through the use of public transportation and by doing it the old fashioned way... WALKING! I fully support any move to enforce the strictest standards for Greenhouse Gas Emission Reduction Targets! As well as increasing accessible alternative transportation methods. Neither Mankind's health and welfare, or those of our planet should ever have taken a back seat to progress. Those were the mistakes of our Grandparents. Those mistakes need to be recognized and mended, it is what is rationally and logically demanded of us in what has been and what is becoming our modern society. That's true forward progress.

Subject: As aggressive as possible

Comment:

First, thank you for your work on SB375. I am pleased to see an aggressive approach to eliminate/minimize greenhouse gas emissions.

I would like to see an even more aggressive stance if possible, more emphasis on public transportation and better city planning are factors that could improve the number of vehicles on the US road system. I would also like to see the highest standards in the world provided by the US in regards to light vehicles' emissions, more than average by a company, but that all of our cars and light trucks have the highest possible efficiency.

Thank you for your time and considerations,

Marc J. Kral

Subject: Please Act with vision on the greatest reduction of EHG Emissions for California!
Comment:

Dear Chairman Nichols and the Honorable Air Resources Management Board,

I strongly urge you to adopt only GHG emission reduction targets that are the most ambitious for California! It is essential for us to look at the long-term health of California -- and all of our families -- our parents, grandparents and children. My children, who are just starting out on their careers in California, will forever be thankful to each of you, when they look back at what you personally did for them and their families now -- all of us -- now and in the future for all of us native Californians!

Thank your again for acting with vision and sense, for all of us.

Best Regards,

James Mulholland

Comment:

Dear board members

For some time now several mails coming to reach me since am outside california and the US shows that the emission of carbon in the region is too much,the people need clean environment and they want the emission of carbon in california to be reduced,as far as i am concern i know california has experience disaster sincer 2006 bush burning.

With my full awareness about this problem i join the number of californians to sign the petition that this office must act to reduction of green house emssion in the state.

Thanks

Subject: SUPPORT Proposed greenhouse gas emission reduction targets (09/22/10 mtg)

Comment:

I received an email from "Doug Soubers", (who could only have gotten name & email from DGS' online contractors list, which I object to but can't block). Mr. Soubers sent me an urgent email with the topic, New regulatory program could raise gas over \$9 per gallon- CONTACT CARB TODAY!

I am doing so because in fact, I AM VERY SUPPORTIVE of AB 32 and SB 375, and your proposed reduction targets for auto and light trucks rules! As I stated in my response to Mr. Soubers, there are many businesses, labor and community interests in strong agreement with this policy -- and individuals like myself who want to breath cleaner air.

Thanks to the ARB and other forces in California, we finally achieved success in enacting higher CAFE standards for new vehicles to be sold in our state. Now it is time to secure similar standards on the vehicles already on our roads and highways.

Why in the world would business interests serve as the basis for deferring or terminating these critically needed pollution reduction standards? It's time everyone do their part in reducing air pollution.

The fact that we are recovering from a serious recession is no basis for turning back this and other related efforts to reduce pollution, or to reduce our dependence on Middle East oil. In fact, these new standards create the opportunity for the new green economy.

I am greatly concerned by the CA BIA, its members, and like-minded businesses are so strongly opposed to these proposed pollution reduction standards. Yet I don't believe these attitudes and actions take place in a vacuum. While in part politically motivated in an increasingly partisan environment, I believe these interest groups' concerns may not be receiving adequate discussion, or that it is not taking place through a meaningful process.

While resolution of everyone's interests is impossible, it is basic human nature to want to be heard, to want one's idea to be given due consideration. It is when treated respectfully, and given the opportunity for genuine open-minded exchange of ideas through a meaningful venue that we demonstrate we are truly a civil society. The alternative is the growing inappropriate political personalization of public policy differences that we see occurring with increasing regularity, including the use of strong-arming and

the subverting of the rule-making process -- by which there are truly no winners, least of all for the ARB and the public's health.

Rather, engaging stakeholders who have any role to play in the issue is the essential first step to ensuring all interests are considered so as to determine the most effective point(s) of intervention. This is why I view the work of the ARB in such high regard. The one area I have not heard attended to by the ARB is the CalPERS, as, given how much sway CalPERS has with the companies it has invested in, they could also be a critical stakeholder in state environmental policy. (Then again, possibly you are including them in your process but not making these efforts public -- which I would hope would be done so the public could understand the connection between investment policies and environmental outcomes.)

Investment policies can play a pivotal role in shaping business practices -- including such matters as developing and using alternative fuels, and keeping jobs in the state (instead of moving them overseas). Changing the overall culture of business to shift attention from the immediate bottom line profits, to one that adopts civic-minded practices that supports policies that enable business to stay financially viable.

As you undoubtedly know, a great example of environmental reform and alternative fuel investment is Holland as a result of the the '70s oil embargo, when Jimmy Carter was President. The overall culture of Holland's society, and therefore, business, is more communitarian than in the U.S., enactment of sweeping environmental policies we could only hope for. Thus, our strategy is to promote and reward such behaviors on a smaller, more focused scale.

Thank you for the opportunity to comment on the proposed rules that I am very much in support of.

I moved to Roseville 5 years ago, at age 55, never having suffered from any allergy in my life. That changed immediately. I have suffered sinus infections constantly and am on medication for allergies. Why? Because I did not know that I was moving to the dirtiest air around central/northern California.

When I drive down I5 to visit my children in Monterey, the sky is ALWAYS brown the whole way. Of course, when i come home via 101 to 680, the sky is silver and/or Brown the entire trip.

What a SHAME to live in the most beautiful area in the USA and live like this!!! Yes, California needs to be in the forefront of the battle because we had so much to lose, and we have lost so much already.

NEXT: Diesel must be targeted and solved asap: Trucks and Trains are vital, and Construction brings jobs, but there has to be a better way.

Think of the children, nevermind us old people!!!

Subject: Clean air, bikeable communities, SB 375

Comment:

Dear Chair Nichols and Air Resource Board Members,

Clean Air is vitally important to our health, and I believe that by the appropriate enforcement of SB 375, we will see a reduction in greenhouse gas (GHG) emission and more sustainable communities and transportation choices.

As a person who values walkable and bikeable communities, accessible alternative transportation, and clean air, I urge you to adopt only GHG emission reduction targets that are ambitious and achievable. It would be a joy for me if I can spend less time on the freeways, save money on gas, and have more time with my children. These things can easily be achieved through compact community planning and affordable housing close to work, school, and community centers. BUT THIS DOES NOT MEAN JUST BUILDING MORE DENSE HOUSING, BUT REALLY ADDRESSING SUSTAINABILITY BY HAVING GREEN PARKS, AND BIKE PATHS, ETC. TO MITIGATE AS NECESSARY, ALONG WITH BETTER STORMDRAIN AND WATER CONSERVATION MANAGEMENT, ETC.

In your upcoming meeting, please vote for ambitious GHG emission reduction targets, and achievable sustainable community plans. Thank you for all your hard work and for the opportunity

Is it the difficulty in securing rail routes at affordable costs that makes us look at super fast trains? It seems this would create connection difficulties at both ends. Why not concentrate on effecient, electric, inter/intra city light rail, busses and the like. So there are contact cables in the over head...install them now, place them better later.

Dear Chair Nichols and Air Resource Board Members,

Thank you for all your hard work in the implementation of SB 375. I believe that by the appropriate enforcement of this law, we will see a reduction in greenhouse gas (GHG) emission and more sustainable communities and transportation choices.

As a person who values walkable and bikeable communities, accessible alternative transportation, and clean air, I urge you to adopt only GHG emission reduction targets that are ambitious and achievable. It would be a joy for me if I can spend less time on the freeways, save money on gas, and have more time with my children. These things can easily be achieved through compact community planning and affordable housing close to work, school, and community centers.

I recently moved away from the Bay Area because of all the traffic and dirty air. It's not even the worst air quality in California, yet no one can take a walk in their neighborhoods without sucking in exhaust with every breath. The air is dirty and left thick layers of dust on my furniture daily. I love to walk, and I'm sure my lungs have suffered for living in that area for 7 years. I moved to the coast for better air quality. The sun is brighter here and there's less dust, and I want it to stay that way.

In your upcoming meeting, please vote for ambitious GHG emission reduction targets, and achievable sustainable community plans. Thank you for all your hard work and for the opportunity to submit my comments.

Sincerely,
Kathy Hawkins

Subject: SB 375 Proposed Targets for Santa Barbara?
Comment:

Dear Chair Nichols and Air Resource Board Members,

Thank you for all your hard work in the implementation of SB 375.

As a person who values walkable and bikeable communities, accessible alternative transportation, and clean air, I cannot believe that my home County of Santa Barbara is proposing to INCREASE GHG emissions while our neighboring counties and all other counties are admirably proposing to decrease GHG emissions. I understand that SBCAG staff made this recommendation but I am surprised that ARB staff did not correct the basis of their calculations. Climate change, as we all know, is a critical global challenge and as a 34-year resident of Santa Barbara I am certain we are NOT doing ALL we can do reduce GHG emissions.

In your upcoming meeting, please rectify this situation and vote for ambitious GHG emission reduction targets, and achievable sustainable community plans for ALL California counties. Thank you for all your hard work and for the opportunity to submit my comments.

Sincerely,
Vijaya Jammalamadaka

It would be a joy for me if I can spend less time on the freeways, save money on gas, and have more time with my children. These things can easily be achieved through compact community planning and affordable housing close to work, school, and community centers.

In your upcoming meeting, please vote for ambitious GHG emission reduction targets, and achievable sustainable community plans.

Thank you for all your hard work and for the opportunity to submit my comments.

Sincerely,

Kenneth Korten

Subject: less vehicles, more clean air!!!!

Comment:

We need to create more communities based on no vehicles with
motors!!!!!! We DO need to do as much as we can to better our air
quality. I lived against the hiwy 101 freeway for over 21 years.
I now have a fatal lung disease from the years of pollution I was
subjected to!!!!!!!!!! We have to do something to help clean the
air up for future generations, as it is too late for me. I cannot
join a community like that, because I cannot walk or bicycle at all
as I used to, but I really need to encourage others to do so!!!!!!
If you can possibly do so, walk or bike to work, the store, to
church - - - - - just do it!!!!!!!!!!!!!!

Subject: Kern County - Isabella Reservoir commuter bike lane

Comment:

We have a wonderful community in the Kern River Valley with one huge flaw. This is the most unbikable community I have ever lived. Many people would commute from community to community if there were a bike lane away from cars that went around the reservoir and bike lanes within the communities. Hikers could use the bike trail and a horse trail adjacent to the bike lane would also be a huge improvement. This would not only be a boon to the environment but tourists upon which the Lake Isabella area relies would be drawn to this area by the mere fact of a bike path around Isabella Reservoir.

Please consider helping improve access to alternative transportation in our community. The land is already federally owned so rights of way should not be an issue.

Thank you.

Comment:

First off, thank you for working hard on SB 375. Please continue to work for strong green house gas limitations. One way to do this is to implement smart plans for urban growth. Specifically this means housing and shopping near transportation arteries. This makes public transportation easier, and will reduce GHG as we can get out and walk around our communities. Thank you.

Subject: Please Support Healthy Communities

Comment:

Dear Chairman Nichols,

I am writing to express my strong support for smart growth and for the proposed ambitious and achievable SB 375 regional targets that will help spur local action to achieve healthier, more sustainable communities across the state.

The proposed targets, especially for the largest regions in the state, move California forward to a more sustainable future and reflect what can be achieved if land use and transportation planning are better integrated and matched with compact community design. Californians can spend less time in traffic and more time with their families if local governments move toward more compact, mixed use communities with more transportation choices.

By pursuing smart growth community planning, Californians can expect significant clean air and public health benefits. For example, the American Lung Association in California recently reported that smarter growth throughout California can help us avoid 140 deaths annually and over \$1.6 billion in health costs from air pollution-related illnesses in 2035, the year the final targets will be achieved.

Along with cutting harmful traffic emissions, reducing our dependency on driving offers a wide range of public health improvements. Building neighborhoods that support opportunities for daily physical activity like walking and biking will help reduce chronic illnesses like asthma, heart disease, obesity, diabetes and depression.

Please continue your leadership and act to adopt the most ambitious targets possible for each region.

For example, the American Lung Association in California recently reported that smarter growth throughout California can help us avoid 140 deaths annually and over \$1.6 billion in health costs from air pollution-related illnesses in 2035, the year the final targets will be achieved.

Along with cutting harmful traffic emissions, reducing our dependency on driving offers a wide range of public health improvements. Building neighborhoods that support opportunities for daily physical activity like walking and biking will help reduce chronic illnesses like asthma, heart disease, obesity, diabetes and depression.

Please continue your leadership and act to adopt the most ambitious targets possible for each region.

Sincerely yours

Thomas Moulding M.D.

Comment:

Dear Chairman Nichols,

I am writing to express my strong support for smart growth and for the proposed ambitious and achievable SB 375 regional targets that will help spur local action to achieve healthier, more sustainable communities across the state.

The proposed targets, especially for the largest regions in the state, move California forward to a more sustainable future and reflect what can be achieved if land use and transportation planning are better integrated and matched with compact community design. Californians can spend less time in traffic and more time with their families if local governments move toward more compact, mixed use communities with more transportation choices.

By pursuing smart growth community planning, Californians can expect significant clean air and public health benefits. For example, the American Lung Association in California recently reported that smarter growth throughout California can help us avoid 140 deaths annually and over \$1.6 billion in health costs from air pollution-related illnesses in 2035, the year the final targets will be achieved.

Along with cutting harmful traffic emissions, reducing our dependency on driving offers a wide range of public health improvements. Building neighborhoods that support opportunities for daily physical activity like walking and biking will help reduce chronic illnesses like asthma, heart disease, obesity, diabetes and depression.

Please continue your leadership and act to adopt the most ambitious targets possible for each region.

Respectfully,
James Maxwell

Comment:

Dear Chairman Nichols,

I am writing to express my strong support for smart growth and for the proposed ambitious and achievable SB 375 regional targets that will help spur local action to achieve healthier, more sustainable communities across the state.

The proposed targets, especially for the largest regions in the state, move California forward to a more sustainable future and reflect what can be achieved if land use and transportation planning are better integrated and matched with compact community design. Californians can spend less time in traffic and more time with their families if local governments move toward more compact, mixed use communities with more transportation choices.

By pursuing smart growth community planning, Californians can expect significant clean air and public health benefits. For example, the American Lung Association in California recently reported that smarter growth throughout California can help us avoid 140 deaths annually and over \$1.6 billion in health costs from air pollution-related illnesses in 2035, the year the final targets will be achieved.

Along with cutting harmful traffic emissions, reducing our dependency on driving offers a wide range of public health improvements. Building neighborhoods that support opportunities for daily physical activity like walking and biking will help reduce chronic illnesses like asthma, heart disease, obesity, diabetes and depression.

Please continue your leadership and act to adopt the most ambitious targets possible for each region.

Comment:

Dear Chair Nichols and Air Resource Board Members,

I gratefully applaud your hard work in the implementation of SB 375. I believe this law and appropriate enforcement, will send us forward in achieving the reductions in greenhouse gas (GHG) emission that we all desire. At the same time, encouraging our better choices for sustainable communities and transportation will enhance our environment and community health in numerous other important ways.

I urge you to adopt the most aggressive yet achievable GHG emission reduction targets. I urge you to influence community development to support connectivity among students, families, and seniors.

As a parent of a 16-year old I have seen vividly, for the last 10 years, how school and after-school activity driving is exacerbated by poor planning and lack of safe bike routes and viable busing schedules. Busing and biking build independence in kids. Time after time, school after school, activity after activity, we would lack the safe bike routes and bus schedules to get to and from our neighborhood. This meant a trip home from work to pick up my son, a trip to his activity, a trip back to work, all just for the ride getting there. This was for repeated trips to sports fields, community center and other class venues, movie theaters, food hang-outs, etc. Along with reduced chances to grow in responsibility, the dependence on my car meant my son spent less time outdoors and more time isolated in computer games.

What I observed was very common among families in my neighborhood. Each neighborhood has stories to tell - their specific wishes and challenges. You need web sites that can take input on suggested bike and bus routes for each neighborhood.

In your upcoming meeting, please vote for ambitious GHG emission reduction targets, and achievable sustainable community plans. Thank you for all your hard work and for the opportunity to submit my comments.

Sincerely,
Kristin Cothorn

Dear Chair Nichols and Air Resource Board Members,

Thank you all for your hard work in the implementation of SB 375. I believe that by the appropriate enforcement of this law, we will see a reduction in greenhouse gas (GHG) emission and more sustainable communities and transportation choices.

As a person who values clean air, accessible alternative transportation, and walkable and bikeable communities, I urge you to adopt only GHG emission reduction targets that are ambitious and achievable. As a citizen who values a clean and healthy environment, I revere and trust the California Air Resources Board to commit, lead, and fulfill these positive changes to ensure a sustainable future for our state. It is of great importance to me that I can spend less time on the freeways, save money on gas, and have more time for myself and my family. These things can easily be achieved through compact community planning and affordable housing close to work, school, and community centers.

In your upcoming meeting, PLEASE vote for ambitious GHG emission reduction targets, and achievable sustainable community plans.

Thank you for all your hard work and for the opportunity to submit my comments.

Sincerely,
Melissa Nieto

Please set high goals for reducing emissions from vehicle travel. However, they need to be done in such a way that it is clear that individual cities and counties must be expected to implement them - not just the MPO.

I would like to see major changes in land use including reducing parking requirements, charging for on-street parking, and increasing residential density.

Dear chair and Resource board members,
I believe that the appropriate enforcement of this law will greatly
reduce greenhouse gas emission.
Also by implementing more bicycle roads and alternative
transportation we will be on the right road.
We can construct miles and miles of proper bike paths throughout a
metropolitan area connecting all the major points of the area for a
fraction of the cost of a regular road with a minimal amount of
miles.
Thank you very much for your attention in this matter.
Sincerely,
David Birnberg

To all members of the Board:

Please pass SB 375. I realize that these are difficult economic times. I am currently unemployed, but I feel strongly that we are running out of time to reduce our green house gas emissions. Mother Earth does not care about our human concept of economics. We must change our human behaviors that are affecting our global climate. We may have no economy to worry about if we don't act now to reduce our green house gas emissions.

Please pass SB 375 even though it may not be popular to do so.

Thank you!

As a teacher I passionately hope that you will move California towards the strictest and most progressive schedule to reduce greenhouse gases. We really need to start thinking of the children, the environment, and way of life they will inherit. Science has given us the facts. There is no longer any doubt that we must change our ways if we are to leave the next generation with a world with opportunities and resources remotely comparable with our own. I hope you move forward with courage and are not swayed by those who only think of their own selfish short term goals.

Subject: More Walkable and Bikable Communities

Comment:

I appreciate all of the great conversations and meetings the ARB has facilitated in regards to SB 375. We support high targets and policy and investments that will make our communities more walkable and bikable and provide viable options to driving.

I encourage the ARB to adopt the staff-recommended draft targets, especially in Southern California. Many stakeholders have worked very hard to support high targets, and leadership choices to improve our mobility and accessibility in our communities.

I commend the ARB and the MPOs for their diligence and leadership and recognize that cities need leadership and resources to help them implement SB 375 and maximize the promised benefits: more sustainable economic development, cleaner air and improved public health, and more walkable neighborhoods with more housing and transportation choices for all.

Thank you for your efforts.

Subject: Adopt the Reduction Targets!

Comment:

I urge the Air Resources Board to adopt the staff-recommended draft targets for MTC, SCAG and the other large MPOs. Everyone has worked very hard to develop these targets and we commend the ARB and the MPOs for their diligence and leadership. But cities need more resources to help them implement SB 375 and maximize the promised benefits: more sustainable economic development, cleaner air and improved public health, and more walkable neighborhoods with more housing and transportation choices for all. Local governments are key partners in SB 375 implementation and all face unprecedented financial challenges in the current economic climate. The ARB should work with cities and the MPOs to secure these resources. Thank you for your efforts.

Comment:

As a former SCAG Regional Council Member during the time that I served on the San Bernardino City Council (1998-2006), I was disappointed to learn that the current SCAG Regional Council voted in favor of lowering GHG reduction targets per SB 375.

I fully support the ARB staff-recommended targets. It is unfortunate that regional leaders do not believe the region has the capacity to meet GHG reduction targets or that moving forward to meet them would be economic engine for the region. It sadly reminds me of the intense opposition voiced by many regional leaders during formation of the South Coast Air Quality Management District in the 70's.

Subject: Please Support SB 375

Comment:

Dear Chairman Nichols,

As a resident of Pasadena concerned with air quality in the LA basin, I am writing you today to express my strong support for the proposed SB 375 regional targets that will help spur local action to achieve healthier, more sustainable communities across the state.

The proposed targets, especially for the largest regions in the state, move California forward to a more sustainable future and reflect what can be achieved if land use and transportation planning are better integrated and matched with compact community design. Californians can spend less time in traffic and more time with their families if local governments move toward more compact, mixed use communities with more transportation choices.

By pursuing smart growth community planning, Californians can expect significant clean air and public health benefits. For example, the American Lung Association in California recently reported that smarter growth throughout California can help us avoid 140 deaths annually and over \$1.6 billion in health costs from air pollution-related illnesses in 2035, the year the final targets will be achieved.

Along with cutting harmful traffic emissions, reducing our dependency on driving offers a wide range of public health improvements. Building neighborhoods that support opportunities for daily physical activity like walking and biking will help reduce chronic illnesses like asthma, heart disease, obesity, diabetes and depression.

Please continue your leadership and act to adopt the most ambitious targets possible for each region.

Comment:

The Community Environmental Council has been very engaged in the SB 375 target setting process, particularly in Southern California.

We support staff's recommendations, but reiterate our previous comments that no region should be allowed to increase per capita emissions. Both AMBAG and SBCAG boards have decided to reject ARB staff recommendations allowing them to increase emissions, and have instead voted for 0% and -5% targets. Please uphold these local votes and do not let any region plan for increased per capita GHGs.

Sincerely,

Michael Chiacos
Transportation Specialist
Community Environmental Council, Santa Barbara, CA

I support the highest targets to reduce Green House Gas Emissions. If not now, when?. "Economic" interests are at play when considering lower targets than what science tells us is absolutely necessary to sustain life as we know it. Our "economy" will suffer in a much larger way; beyond comprehension, when we start suffering more drought, floods, wildfires, disease, and food shortages due to climate shifts. Climate Change is THE extreme issue we face and we need extreme measures. Otherwise, it is our children and future generations that will suffer the most. Doing less than what we should and CAN do NOW, is inexcusable.

Subject: Support for Lowering Exhaust in Region

Comment:

I live in the Eagle Rock community of the City of Los Angeles. My daughter has asthma, which we have observed gets worse when she is exposed to car and truck exhaust. I urge the Californi Air Resources Board to adopt the staff-recommended draft targets for SCAG and other large regions.

I feel like there is a lot cities and counties can do to reduce exhaust fumes and create more walkable, livable environments by building more densely and affordably around transit and job centers and providing more public transportation conecting them. While local resources are scarce right now, there seems to be a lot of interest from the federal government in investing in producing such communities, especially in Southern California. If we do not encourage local governments to seek funding to plan and create such environments, we will cheat our region out of that funding.

I hope that ARB will work with local governments to secure funding for effort that's so important for ourselves and our children.

First Name: Elizabeth

Last Name: Jonasson

Email Address: elizabeth@coalitionforcleanair.org

Affiliation: Coalition for Clean Air

Subject: Support for staff recommended targets for the San Joaquin Valley

Comment:

I am writing to support the original recommended placeholder targets of 5% and 10% for the San Joaquin Valley. As you know, the Valley suffers from some of the worst air quality in the nation. Without aggressive and attainable reduction targets, valley residents will continue to breath pollution and get sick.

The concerns of municipal planners are understood, and while realistic targets are needed, the spirit is that these be such that require significant effort as opposed to easy to achieve. Ambitious targets will help spur innovation, protect farmland from urban sprawl, reduce municipal costs associated with growth and help make public transit more profitable. The goal is to change the current situation and not simply maintain the status quo.

It is with the emphasis on change that I urge the board to adopt the staff recommended targets for the San Joaquin Valley.

Sincerely,

Elizabeth Jonasson
Campaign and Outreach Associate

Comment:

I am writing to urge the California Air Resources Board members to support staff's recommendation of statewide greenhouse gas emission reduction targets of 5% for 2020 and 10% for 2035.

The staff recommendation includes reasonable, realistic targets that will be eminently achievable. Those figures represent a reasonable compromise, considering that research shows that even higher targets could be possible (the Blueprint's popular Valleywide Hybrid scenario could achieve 12% reductions; Vision California's scenario could achieve 23%).

Targets like those will have many, many benefits, including:

- Eliminate almost 14,000 tons of air pollution
- Save 600 million gallons of fuel per year
- Save the average household \$3,600 per year in fuel and energy costs
- Protect 375 square miles of farmland from development
- Saves 18,000 gallons of water per year for each new home built

Subject: Greenhouse Gas

Comment:

Dear Chair Nichols and Air Resource Board Members,

Thank you all for your hard work in the implementation of SB 375. I believe that by the appropriate enforcement of this law, we will see a reduction in greenhouse gas (GHG) emission and more sustainable communities and transportation choices.

As a person who values clean air, accessible alternative transportation, and walkable and bikeable communities, I urge you to adopt only GHG emission reduction targets that are ambitious and achievable. As a citizen who values a clean and healthy environment, I revere and trust the California Air Resources Board to commit, lead, and fulfill these positive changes to ensure a sustainable future for our state. It is of great importance to me that I can spend less time on the freeways, save money on gas, and have more time for myself and my family. These things can easily be achieved through compact community planning and affordable housing close to work, school, and community centers.

In your upcoming meeting, PLEASE vote for ambitious GHG emission reduction targets, and achievable sustainable community plans.

Thank you for all your hard work and for the opportunity to submit my comments.

Sincerely,
Michael Peng

Subject: Adopt Strong SB 375 targets

Comment:

I urge the Air Resources Board to adopt the staff-recommended draft targets for SCAG and the other large MPOs. Everyone has worked very hard to develop these targets and we commend the ARB and the MPOs for their diligence and leadership. But cities need more resources to help them implement SB 375 and maximize the promised benefits: more sustainable economic development, cleaner air and improved public health, and more walkable neighborhoods with more housing and transportation choices for all. Local governments are key partners in SB 375 implementation and all face unprecedented financial challenges in the current economic climate. The ARB should work with cities and the MPOs to secure these resources. Thank you for your efforts.

Comment:

The subject practically goes without saying and this legislation is clearly the apropos means at this time. Please count me as a California resident in favor.
