Re: Reduce VOCs on September 24th

Dear Chairman Nichols:

I applaud the California Air Resources Board's (CARB) efforts to reduce the emissions of volatile organic compounds (VOCs) from consumer products.

I strongly encourage you to lead the way in reducing harmful toxics found in consumer and industrial products, specifically multipurpose solvents and paint thinners. By regulating and limiting these chemicals from our products, the state of California would again set a precedent in protecting our environment and the health of families and workers.

VOCs endanger the health of those who come in contact with them. We are all vulnerable to the harmful effects of these chemicals, which are often emitted by products used where we live and work, as well as where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by consumer and industrial products, only increase the chances of more frequent attacks or develop asthma in the future. Workers, and others on the front lines of exposure, may experience an increased risk of cancer or liver and kidney damage from daily use of these toxic substances.

As a consumer and concerned citizen, I urge CARB to adopt tough regulations on consumer and industrial multipurpose solvents and paint thinners.

Please take this opportunity to protect the health of our families by significantly reducing these air pollutants that emanate from multipurpose solvents and paint thinners.

I strongly encourage you to lead the way in reducing harmful toxics found in consumer and industrial products, specifically multipurpose solvents and paint thinners. By regulating and limiting these chemicals from our products, the state of California would again set a precedent in protecting our environment and the health of families and workers.

VOCs endanger the health of those who come in contact with them. We are all vulnerable to the harmful effects of these chemicals, which are often emitted by products used where we live and work, as well as where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by consumer and industrial products, only increase the chances of more frequent attacks or develop asthma in the future. Workers, and others on the front lines of exposure, may experience an increased risk of cancer or liver and kidney damage from daily use of these toxic substances.

As a consumer and concerned citizen, I urge CARB to adopt tough regulations on consumer and industrial multipurpose solvents and paint thinners.

Please take this opportunity to protect the health of our families by significantly reducing these air pollutants that emanate from multipurpose solvents and paint thinners.

Re: Reduce VOCs on September 24th

Dear Chairman Nichols:

I applaud the California Air Resources Board's (CARB) efforts to reduce the emissions of volatile organic compounds (VOCs) from consumer products.

I strongly encourage you to lead the way in reducing harmful toxics found in consumer and industrial products, specifically multipurpose solvents and paint thinners. By regulating and limiting these chemicals from our products, the state of California would again set a precedent in protecting our environment and the health of families and workers.

VOCs endanger the health of those who come in contact with them. We are all vulnerable to the harmful effects of these chemicals, which are often emitted by products used where we live and work, as well as where our children study and play.

Subject: Reduce Toxic Emissions from Paint Thinners and Multipurpose Solvents on September 24

Comment:

To: Chairman Mary Nichols
California Air Resources Board
1001 "I" Street
P.O. Box 2815
Sacramento, CA 95812

Re: Reduce VOCs on September 24th

Dear Chairman Nichols:

I applaud the California Air Resources Board's (CARB) efforts to reduce the emissions of volatile organic compounds (VOCs) from consumer products.

I strongly encourage you to lead the way in reducing harmful toxics found in consumer and industrial products, specifically multipurpose solvents and paint thinners. By regulating and limiting these chemicals from our products, the state of California would again set a precedent in protecting our environment and the health of families and workers.

VOCs endanger the health of those who come in contact with them. We are all vulnerable to the harmful effects of these chemicals, which are often emitted by products used where we live and work, as well as where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by consumer and industrial products, only increase the chances of more frequent attacks or develop asthma in the future. Workers, and others on the front lines of exposure, may experience an increased risk of cancer or liver and kidney damage from daily use of these toxic substances.

As a consumer and concerned citizen, I urge CARB to adopt tough regulations on consumer and industrial multipurpose solvents and paint thinners.

Please take this opportunity to protect the health of our families by significantly reducing these air pollutants that emanate from multipurpose solvents and paint thinners.

Re: Reduce VOCs on September 24th

Dear Chairman Nichols:

I applaud the California Air Resources Board's (CARB) efforts to reduce the emissions of volatile organic compounds (VOCs) from consumer products.

I strongly encourage you to lead the way in reducing harmful toxics found in consumer and industrial products, specifically multipurpose solvents and paint thinners. By regulating and limiting these chemicals from our products, the state of California would again set a precedent in protecting our environment and the health of families and workers.

VOCs endanger the health of those who come in contact with them. We are all vulnerable to the harmful effects of these chemicals, which are often emitted by products used where we live and work, as well as where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by consumer and industrial products, only increase the chances of more frequent attacks or develop asthma in the future. Workers, and others on the front lines of exposure, may experience an increased risk of cancer or liver and kidney damage from daily use of these toxic substances.

As a consumer and concerned citizen, I urge CARB to adopt tough regulations on consumer and industrial multipurpose solvents and paint thinners.

Please take this opportunity to protect the health of our families by significantly reducing these air pollutants that emanate from multipurpose solvents and paint thinners.

Many children in our communities suffer from asthma, and the chemicals emitted by consumer and industrial products, only increase the chances of more frequent attacks or develop asthma in the future. Workers, and others on the front lines of exposure, may experience an increased risk of cancer or liver and kidney damage from daily use of these toxic substances.

As a consumer and concerned citizen, I urge CARB to adopt tough regulations on consumer and industrial multipurpose solvents and paint thinners.

Please take this opportunity to protect the health of our families by significantly reducing these air pollutants that emanate from multipurpose solvents and paint thinners.

Subject: Reduce Toxic Emissions from Paint Thinners and Multipurpose Solvents on September 24

Comment:

To: Chairman Mary Nichols
California Air Resources Board
1001 "I" Street
P.O. Box 2815
Sacramento, CA 95812

Re: Reduce VOCs on September 24th

Dear Chairman Nichols:

I applaud the California Air Resources Board's (CARB) efforts to reduce the emissions of volatile organic compounds (VOCs) from consumer products.

I strongly encourage you to lead the way in reducing harmful toxics found in consumer and industrial products, specifically multipurpose solvents and paint thinners. By regulating and limiting these chemicals from our products, the state of California would again set a precedent in protecting our environment and the health of families and workers.

VOCs endanger the health of those who come in contact with them. We are all vulnerable to the harmful effects of these chemicals, which are often emitted by products used where we live and work, as well as where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by consumer and industrial products, only increase the chances of more frequent attacks or develop asthma in the future. Workers, and others on the front lines of exposure, may experience an increased risk of cancer or liver and kidney damage from daily use of these toxic substances.

Dear Chairman Nichols:

I applaud the California Air Resources Board's (CARB) efforts to reduce the emissions of volatile organic compounds (VOCs) from consumer products.

I strongly encourage you to lead the way in reducing harmful toxics found in consumer and industrial products, specifically multipurpose solvents and paint thinners. By regulating and limiting these chemicals from our products, the state of California would again set a precedent in protecting our environment and the health of families and workers.

VOCs endanger the health of those who come in contact with them. We are all vulnerable to the harmful effects of these chemicals, which are often emitted by products used where we live and work, as well as where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by consumer and industrial products, only increase the chances of more frequent attacks or develop asthma in the future. Workers, and others on the front lines of exposure, may experience an increased risk of cancer or liver and kidney damage from daily use of these toxic substances.

As a consumer and concerned citizen, I urge CARB to adopt tough regulations on consumer and industrial multipurpose solvents and paint thinners.

Please take this opportunity to protect the health of our families by significantly reducing these air pollutants that emanate from multipurpose solvents and paint thinners.

Volatile organic compounds (VOCs) harm our families' health and contaminate our air. Everyone is vulnerable to the harmful effects of these chemicals, which are emitted by products often used where we work and live and where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by multi-purpose solvents and paint thinners only increase the chances that they endure more frequent attacks or develop asthma in the future. Furthermore, workers may experience an increased risk of liver and kidney damage and cancer from the daily use of these products.

As a consumer and concerned citizen, I urge the California Air Resources Board to adopt tough regulations on these products.

Please take this opportunity to protect the health of our families by significantly reducing the harmful toxics and smog-forming emissions that emanate from Multi-purpose Solvents and Paint Thinners.

Thank you.

Comment:

I encourage you to strongly reduce the harmful toxics and smog-forming emissions found in consumer products such as multipurpose solvents and paint thinners. By regulating and reducing these chemicals from consumer products, the State of California will set another precedent in protecting the health of families and workers.

Furthermore, workers may experience an increased risk of liver and kidney damage and cancer from the daily use of these products.

As a consumer and concerned citizen, I urge the California Air Resources Board to adopt tough regulations on these products.

Please take this opportunity to protect the health of our families by significantly reducing the harmful toxics and smog-forming emissions that emanate from Multi-purpose Solvents and Paint Thinners.

Thank you.

Subject: Adopt a Strong Regulation, Reduce VOCs in Consumer Products

Comment:

I encourage you to strongly reduce the harmful toxics and smog-forming emissions found in consumer products such as multipurpose solvents and paint thinners. By regulating and reducing these chemicals from consumer products, the State of California will set another precedent in protecting the health of families and workers.

Volatile organic compounds (VOCs) harm our families' health and contaminate our air. Everyone is vulnerable to the harmful effects of these chemicals, which are emitted by products often used where we work and live and where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by multi-purpose solvents and paint thinners only increase the chances that they endure more frequent attacks or develop asthma in the future. Furthermore, workers may experience an increased risk of liver and kidney damage and cancer from the daily use of these products.

As a consumer and concerned citizen, I urge the California Air Resources Board to adopt tough regulations on these products.

Please take this opportunity to protect the health of our families by significantly reducing the harmful toxics and smog-forming emissions that emanate from Multi-purpose Solvents and Paint Thinners.

Comment:

I encourage you to strongly reduce the harmful toxics and smog-forming emissions found in consumer products such as multipurpose solvents and paint thinners. By regulating and reducing these chemicals from consumer products, the State of California will set another precedent in protecting the health of families and workers.

Volatile organic compounds (VOCs) harm our families' health and contaminate our air. Everyone is vulnerable to the harmful effects of these chemicals, which are emitted by products often used where we work and live and where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by multi-purpose solvents and paint thinners only increase the chances that they endure more frequent attacks or develop asthma in the future. Furthermore, workers may experience an increased risk of liver and kidney damage and cancer from the daily use of these products.

As a consumer and concerned citizen, I urge the California Air Resources Board to adopt tough regulations on these products.

Please take this opportunity to protect the health of our families by significantly reducing the harmful toxics and smog-forming emissions that emanate from Multi-purpose Solvents and Paint Thinners.

Thank you.

Comment:

I encourage you to strongly reduce the harmful toxics and smog-forming emissions found in consumer products such as multipurpose solvents and paint thinners. By regulating and reducing these chemicals from consumer products, the State of California will set another precedent in protecting the health of families and workers.

Volatile organic compounds (VOCs) harm our families' health and contaminate our air. Everyone is vulnerable to the harmful effects of these chemicals, which are emitted by products often used where we work and live and where our children study and play.

Many children in our communities suffer from asthma, and the chemicals emitted by multi-purpose solvents and paint thinners only increase the chances that they endure more frequent attacks or develop asthma in the future. Furthermore, workers may experience an increased risk of liver and kidney damage and cancer from the daily use of these products.

As a consumer and concerned citizen, I urge the California Air Resources Board to adopt tough regulations on these products.

Please take this opportunity to protect the health of our families by significantly reducing the harmful toxics and smog-forming emissions that emanate from Multi-purpose Solvents and Paint Thinners.

Thank you.
