Email Address: mreid@vipn.com  
Affiliation:

Subject: Clean up diesel pollution  
Comment:

I fully support the proposed regulation for in-use off-road diesel vehicles. My wife has asthma and diesel pollution is particularly aggravating to her. Thousands of children are diagnosed with asthma each year, and the problem is acute in areas with high diesel emissions. The human and economic costs of this disease are far greater than any impact this rule would have.

I support strong air standards for construction equipment in California.

Thank you.

Matthew Reid

Comment:

To Whom It May Concern,

I am writing in support of stricter standards for construction equipment in California. It is time we take action on many fronts in relation to our air quality, and construction equipment is a major source of deisel polution in California. It is not only our health that depends on curbing polution, but our very existence. We must take steps to curb CO2 emissions. Regulating construction equipment is a step in the right direction. Thank you.

Re: May 24 ARB vote to reduce air pollution from California's construction equipment

Among other things, this ruling would:

Help bring the most polluted areas of the state, the Los Angeles/Long Beach air basin and the San Joaquin Valley, into attainment with federal air quality standards; and

By 2020, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air.

Subject: Cut emissions from Of-Road Diesel Vehicles

Comment:

Dear ARB,

Congratulations on your mandate to help California cut carbon emissions. I am delighted that you will be setting policy standards not only for our fine state, but setting an example to the rest of the U.S.

I am writing today to ask you to please consider the adoption of proposed regulation for in-use off-road diesel vehicles, such as construction equipment. These vehicles need to be regulated more strictly as they are the second largest source of diesel pollution in the state - and contributing a large amount of NOx and particulate matter. These are the elements of smog, which contributes to high asthma rates and severe strain on our health care system.

The proposed regulation will help to cut back on smog in California and to prevent the 4000 premature deaths associated with this pollution. Please support this regulation and help make California an environmental leader.

Thank you for your consideration of my comment.

Comment:

I support the strongest possible air quality standards. I hope and expect that you do too.

By supporting rules to clean up our air, we'll be saving lives, preventing diseases and suffering, beautifying our society, acting as a role model for the rest of the country and beyond, and we'll all live happier and healthier lives.

Exposure to smog and other pollutants is dangerous. We can fairly easily clean up a lot of pollutants by preventing them, especially in the construction industry, a major source of California pollution.

Let's make a cleaner, healthier, happier, and more beautiful California happen by voting for the new rule to regulate the construction industry.

Thank you for supporting the people's interests.

Comment:

I was at a meeting the other evening sponsored by the League of Women VOters and I was appalled to hear that the Valley here in Ca has a very high air pollution rate due to diesel fuel emmissions from trucks etc. We need regulation morea nd more to improve the air quality of our valley. We have not only high diesel pollution but also the big Ag industry with their ongoing use of uncontrolled pesticide use has greatly made our valley one of the worst areas to live in for air quality. We need legislation to regulate all of the above to improve air quality in this state.

Comment:

Thank you for considering cutting emission from the construction industry - and therefore leading the way for reducing all diesel pollution.

We hope this also paves the way for less global warming, which will help all life flourish in this state and nationally and internationally. Air pollution in particular can travel long distances and reach beyond its local source.

Thanks for leading the way!

Subject: I strongly support stronger air standards

Comment:

I strongly support stronger air standards for California's construction equipment. We can't blindly choose "progress" over health. Construction equipment is the second largest source of diesel pollution in the state, accounting for 20% of particulate matter

(soot) and 16% of smog-forming Nitrogen Oxides (NOx). These pollutants are two of the biggest pollution hazards for public health in California and throughout the country. We are smarter than this. Pollution is just a design problem and this is a solvable one without undue economic harm. Please vote for stringent pollution controls.

Sincerely,

Joe Mozdzen

Laguna Beach, CA

Subject: Clean Air in California and in the world

Comment:

"Air" is something we can't see on a clear day, but clear days are rare, especially in certain areas where human activities spew great quantities of matter, usually from energy sources related to machines of building, industry. All industrial activities all around the world contribute to the whole of the pollution we all breathe and often enough die from. Even certain industries prohibited in the US by "Clean Air" laws, such as the manufacture of polyurethane in emerging countries of Asia and Eastern Europe contribute to air pollution all over the world. Knowing that the large machines used in areas of California for construction, and for farming are belching forth noxious pollution that is sickening to people, animals, our water, and plants, it is incumbent on all to do everything possible to bring clean air legislation to life.

California has lead the nation in response to both global warming and preservation of air quality.  
We need to continue to stand up to forces that want to preserve the statua quo for their own agrandisement. There is no particular real reason to hesitate to do what it takes to improve our quality of life which is after all one of the central values of California living.  
We currently lead the nation also in poor air quality and a good deal of this is created by the lack of controls on heavy equipment and diesel fume generation. I have long felt that these tools should be run on natural gas or other non-polluting energy as are city buses and trash trucks.  
It only makes good sense.  
Thank you.

It is time that we as Californians take our place with the rest of the responsible and intelligent beings regarding our enviroment as well as showing the integrity to lead, as we have always done in the past. Prior to becoming weak kneed and gutless commencing in 80's. Its time for real patriotism and stop the dinosaour mentality. VOTE TO STRENGTHEN OUR AIR STANDARDS THIS MONTH, and create some landmarks in this all important issue, for the rest of the nation

-- Prevent 4,000 premature deaths;

-- Result in health benefits and reduced health care and hospital visits of \$18 to \$26 billion;

-- Help bring the most polluted areas of the state, the Los Angeles/Long Beach air basin and the San Joaquin Valley, into attainment with federal air quality standards; and

-- By 2020, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air.

Subject: Upcoming Vote By CA Air Resources Board  
Comment:

To Whom it may concern,

As the CA Air Quality Resources Board, you are scheduled to vote later this month on a ruling to strengthen our state's air standards - with a particular emphasis on control of air pollution from construction equipment. California has become the leader, as a state, in the battle to win back the quality of our air, our water, and our oceans. You have a unique opportunity to further that cause by enforcing/endorsing stricter controls over construction equipment exhaust. As I am sure you are aware, construction equipment is the second largest source of diesel exhaust pollution in the state. It contributes 20% of the particulate matter and 16% of the NOx (nitrogen oxides) - the two biggest pollution hazards to public health in the state.

This kind of pollution can contribute to and indeed cause a myriad of health problems including asthma, lung infections, bronchitis and even heart attacks. Each of these in turn contributes to thousands of cumulative days missed from school and work due to illness. This type of exhaust is bad for health and bad for our economy. It must be controlled and regulated more strictly.

Please therefore do all in your power to impose stricter regulations on California's construction equipment exhausts. I am wholeheartedly in support of stronger air standards for California's construction equipment.

Sincerely, Thomas Dadant, Santa Cruz, CA

Please vote in favor of the new bill to regulate "In-Use Off-Road Diesel Vehicles. Many scientific studies have proven that particles from diesel engines are very toxic to the respiratory systems in people, particularly young children and senior citizens. There is a very high cost to a sickened and weakened public that should be fully considered when making this important decision, the " Result in health benefits and reduced health care and hospital visits is \$18 to 26 billion dollars", to the tax payers. The cost for allowing filthy, old technology, diesel vehicles to operate is much to high. It is time to step foreward and insist on a cleaner and healthier future for California citizens.

Please vote in favor of the new bill to regulate "In-Use Off-Road Diesel Vehicles.

I am writing in support of a vote to reduce air pollution from California's construction diesel equipment!

It should not have taken us this long to do something about such an unhealthy source of air pollution. Breathing diesel soot is poisonous.

I cannot even drive into the San Joaquin Valley without feeling like I'm partially suffocating. The air quality there is disgusting.

A vote for reducing diesel pollution from construction equipment will have myriad health benefits.

Please vote Yes to adopt and enforce whatever laws will help to reduce diesel pollution!

Thank you.

Subject: May 24 regulation of construction equipment

Comment:

California should have the first rule in the nation to curtail the significant diesel particulate matter and other pollutants from construction equipment.

This is the second largest source of diesel pollution in the state. Particulate matter (soot) and smog-forming Nitrogen Oxides (NOx) are two of the biggest pollution hazards for public health in California and throughout the country.

There are many studies documenting the numerous non-cancer negative health effects of these pollutants. These health impacts result in tens of thousands of premature deaths in the U.S., as well

as hospital admissions, emergency room visits, absences from school or work, and restricted activities related to asthma attacks.

It is particularly important to the children and elderly in California that strong measures are taken to reduce significantly these pollutants.

Subject: Strengthen Air Standards for Off Road Vehicles

Comment:

Simply put , I cannot believe that we haven't moved on stricter air standards for all vehicles that emit excessive carbon. We have the technology. Please get us further to clean air and better health for all by strengthening air pollution laws, in particular for construction equipment and vehicles.

Comment:

To the Members of ARB:

I believe that California needs to cut this major source of dangerous air pollution, which is affecting all of us on a daily basis. Construction equipment is the second largest source of diesel pollution in the state, accounting for 20% of particulate matter(soot) and 16% of smog-forming Nitrogen Oxides (NOx). These pollutants are two of the biggest pollution hazards for public health in California and throughout the country.

I personally have had a difficult time dealing with these pollutants even in our own small neighborhood, as there has been so much construction going on in the last few years. It is hard to believe that we live only three blocks from the ocean. Almost every day we are subjected to the awful smell of diesel and gas pollution. We rarely get the chance to smell any clean ocean air.

These pollutants impact health, resulting in tens of thousands of premature deaths in the U.S. from heart and lung disease annually, as well as hospital admissions, emergency room visits, absences from school or work, and restricted activities related to asthma attacks. Children are especially vulnerable because their lungs are still developing.

Please pass the new rule which supports stronger air standards for California's construction equipment.

Sincerely,  
Charle Hazlehurst

With the great advances in design of diesel powerplants (at least in Europe), there is no longer justification overlook the emissions of off-road equipment.

I would especially urge you to advocate the revocation of legislation that inhibits or prohibits the mass marketing of vegetable-based diesel fuel ("biodiesel"), as this is both a renewable source, and a known effective means of reducing particulates and CO2 emissions.

Dear Honorable members of the Air Resources Board,

I strongly urge you to go through with the proposed regulation and cut pollution from in-use off-road diesel vehicles. I remember Los Angeles tried to pass a restriction on diesel vehicles a year or two back that was struck down in Washington. They don't have to live here and breathe the polluted air and I don't think the federal government has a right to tell us we have to allow diesel pollutants just because their lobby has deep pockets. Please pass this proposal for our State, our citizens, our children, and our future.

T. Monroe

Comment:

I would encourage you to reduce air pollution from construction equipment that uses diesel. It seems there should be a ban on these machines, as they are the second largest polluter in California.

Diesel is the worst when it comes to particulate pollution, and particulate pollution is the most damaging to the lungs, especially to the lungs of children.

I encourage you to do what I'm sure you know in your heart is the right thing to do.

Subject: Please help reduce construction vehicle pollution  
Comment:

Our air quality in So Cal is better than it used to be. But we could do a lot more to improve it.

I believe that trucks and construction equipment are large contributors to air pollution, and they should be held to much tougher standards. We're demanding that cars are more efficient, and there should be no exception for larger vehicles. If there are cleaner buses on the streets, then why not trucks, too? Improving their efficiency would solve problems too many to list. But one of them is cleaner air - which you at the Air Resources Board are concerned with.

Please do all you can to make our world better and cleaner!  
Thank you.

Comment:

As a resident of the Greater Los Angeles area, a real estate practitioner, and as the aunt of two small children with asthma, I am writing to urge you to PLEASE adopt the proposed regulation of In-Use Off-Road Diesel Vehicles, such as those used in construction.

Witnessing the health problems and ongoing treatment of my nephews with asthma fills me with dismay and alarm. Having researched on my own the possible causes of their suffering, I have found that Southern California has among the worst air quality IN THE NATION!

This regulation would go a long way toward reducing particulate pollution along with our infamous smog, and would - in addition - lead the way for the nation, as California so often does. This regulation matters - immensely - to the people of California and to the nation. For our health, the health of our children, and our environment, I urge you to PLEASE... PLEASE... PLEASE adopt this regulation, and adopt it NOW!

Thank you for your attention.

Hello,

I am writing to encourage you to strengthen the State air started to reduce air pollution from construction equipment.

As you know, Construction equipment is the second largest source of diesel pollution in the state. Exposure to the smog emitted by this equipment can have serious health effects. The particulate air pollution is especially dangerous. This pollution results in many premature deaths and illnesses.

The new rule you are considering will prevent premature deaths, result in decreased healthcare costs and hospital visits, reduce pollution in some of the most polluted areas in the state and prevent tons of NOx and particulates from entering the atmosphere.

Thank you.

In past years, I have operated such vehicles and worked in the construction industry, so I know the field. With an MBA in Finance, I am also familiar with the economic impacts of government regulation.

The benefits of reducing pollution from such equipment are not only huge but also permanent, both in reduced health costs and in human suffering terms.

While there are costs to cleaning up these sources, they are much lower than they could be, due to the existing recent body of research in reducing pollution from highway vehicles and stationary sources. Additionally, by allowing a timed phase-in with regular rebuild and replacement schedules, the expense will be not only minimal but also spread out.

Thank you for considering my comments. Please keep me informed of your actions on this topic.

Subject: Reduce Deisel Pollution

Comment:

I believe California should lead the way in reducing the particulate and soot pollution from all sources, particularly from construction diesel powered machines. They are the second largest source of this type of pollution. The cleaner diesel fuel used in Europe may be a relatively simple way to reduce their negative impact.

Thanks

K Lusebrink

Subject: In-Use Off-Road Diesel Vehicles rule very important

Comment:

In-Use Off-Road Diesel Vehicles rule is very important. We need to reduce air pollution as much as possible for two reasons: health and global warming mitigation. This ruling is long overdue. Particulates increase the incidence of asthma. I had asthma for many years and know first hand the agony you feel when you have trouble breathing. I wouldn't wish that upon anyone. All that can be done to prevent asthma should be done. The nitrous oxide is a greenhouse gas that should not be entering the atmosphere. Global warming is our most serious problem. We need to take drastic measures in order to mitigate the effects of global warming. This ruling is one step that has to be taken.

Sincerely,

Wren Osborn

Subject: In-Use Off-Road Diesel Vehicles."

Comment:

As an asthmatic I have a strong feeling about cleaner air. I understand that construction vehicles are putting excessive particulates into the air that are putting not only my health at jeopardy but many children who need to grow into health individuals. Asthma is on the increase in California and the area from Sacramento to Bakersfield is one of the most hazzardous.

I realize that putting more restrictions on money making corporations is a hard decision, however, thinking that it might save one life, much less the estimated 4000 premature deaths, eliminate the \$18 million PLUS in doctor/hospital costs to families and by 2020 prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air, I think the decision should get easier.

Please consider that the health, safety and welfare of California citizens should be everyone's priority.  
Thank you for consideration in reading this,  
Sara E. Parrish

California Air Resources Board,

California needs cleaner air. I am writing this comment to urge you to enact more stringent requirements for In-Use Off-Road Diesel Vehicles. They're major contributors to both particulate matter and smog-forming pollution in the state, and throughout the country. The new rule that you are considering would prevent premature deaths, reduce health care costs, help our most polluted areas of the state meet federal air quality standards, and prevent tons of air borne pollution from entering the atmosphere.

Thank you, in advance, for taking action on this vital issue.

Sincerely,

Elizabeth Holmes

Healdsburg, California

Subject: Please vote to improve air quality

Comment:

I am a concerned citizen about California air quality and quality of life. Our state is a leader in production and agricultural sectors, so it is also the case that we produce much of the air pollution that negatively affects the quality of air we breathe and thusly the quality of our lives as Californians. As an individual, I know there are a few powerful tools we have to effect improved air quality, such as driving our cars less among making other 'smart' consumer choices. I know it is also my responsibility as an educated (socially and politically conscious) individual to hold accountable the individuals and bodies that legislate the laws that also govern our society, our every day lives, extending to the very issue of our air quality.

If I even just consider our major sea ports and recognize the air pollution that is produced there, I can only imagine how large a role things like vehicles and trucks play in also adding to polluting our air quality. California needs cleaner air. Please consider voting to strengthen the air standards and reduce air pollution from in-use off-road diesel vehicles.

Subject: In-Use Off-Road Diesel Vehicles: We need to strengthen state air standards  
Comment:

We need to do this in order to:

- Prevent 4,000 premature deaths;
- Result in health benefits and reduced health care and hospital visits of \$18 to \$26 billion;
- Help bring the most polluted areas of the state, the Los Angeles/Long Beach air basin and the San Joaquin Valley, into attainment with federal air quality standards; and
- By 2020, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air.

Put a dent into Global warming.

Saludos,

Miguel D. Godinez

Subject: Air quality standards for CA construction equipment

Comment:

On May 24, the ARB is scheduled to vote on a new rule to reduce air pollution from California's construction equipment. This is the first rule of its kind in the nation, and it could not come at a better time.

Among other things, e.g. smog exposure, particulate air pollution is a serious problem, especially in Contra Costa County, where I live. Particulates -or soot- can be inhaled and reach deep into the lungs. These tiny particulates can enter the circulatory system and damage blood vessels. Particulate pollution is associated with heart attacks, irregular heartbeat, asthma attacks, reduced lung function and bronchitis. In fact, a lifelong friend (since kindergarten) of mine, a husband and father -Michael Wooldridge- was diagnosed with stage 3A non-small cell lung cancer in 2003. He never once smoked in his life. He was on the swim team, a cross country runner, soccer player and runner...basically, the last person one would expect to develop lung cancer. However, one thing he did do all his life was live in the shadows of Contra Costa County's refineries and industries that have belched particulate pollution for more than 40 years.

My friend isn't the only victim of this environmental hazard; my family and I and everybody we know are potentially at risk. ANYTHING that can be done to reduce overall pollution is positive, and will have significant positive impact in areas like the San Joaquin Valley and Los Angeles/Long Beach air basin.

I support stronger air standards for California's construction equipment, and so do millions of others. Please help make California greener and cleaner, for all of us.

Sincerely,

Gregory Maier

Construction vehicles emit a significant portion of CA's particulate pollution and the technology exists to reduce these emissions dramatically. We should do it. Public health benefits alone will make the legislation pay for itself many times over. CA needs cleaner air, and the challenge is only getting bigger as more people move into the state and more pollution flows into our air from China. This would be a timely and meaningful victory in the battle for cleaner air, and better health in CA.

Comment:

Ladies and Gentlemen,

I am in favor of the new rule for emissions from In-Use Off-Road Diesel Vehicles that is intended to reduce air pollution from California's construction equipment. I have asthma, and I am very sensitive to diesel engine exhaust. So, I would definitely like to see diesel engine emissions more closely controlled by the Air Resources Board.

I understand that scientists project that the new rule will save thousands of lives annually, reduce public and private expenditures for health care, help bring the Los Angeles/Long Beach air basin and the San Joaquin Valley air basin closer to compliance with federal air quality standards; and, when fully implemented, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution by about 2020.

Thank you for this opportunity to comment

Subject: In-Use Off-Road Diesel Vehicle Rules  
Comment:

Ladies and Gentlemen:

As a vote on the abovementioned matter is scheduled for later this month, please allow me to urge you to consider imposing stricter, rather than looser, regulations on ALL diesel vehicles, not just those used in the construction industry. This type of engine spews a disproportionate amount of particulate matter into our air, matter that when breathed does significant harm to the lungs of the citizenry.

The engineers at the German car maker Audi have developed technology that permits diesel engines to run virtually pollution-free, and I urge you to investigate such technology as a way to protect the populace from the menace presented by diesel engine particulates. Please make the restrictions tighter to help save lives. Thank you for your time and consideration.

Subject: In-Use Off-Road Diesel Vehicles  
Comment:

Please vote in favor of strengthening state air standards and reducing air pollution from construction equipment. On May 24th you will vote on a new rule to reduce air pollution from California's construction equipment. Too many kids have asthma. California needs cleaner air.

This new rule will:

- Prevent 4,000 premature deaths;
- Result in health benefits and reduced health care and hospital visits of \$18 to \$26 billion;
- Help bring the most polluted areas of the state, the Los Angeles/Long Beach air basin and the San Joaquin Valley, into attainment with federal air quality standards; and
- By 2020, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air.

Do the right thing!

Thanks.

Comment:

Since construction equipment is the 2nd largest source of diesel pollution in the state, I am urging you to strengthen the State's air standards.

With the pollution of these vehicles causing premature deaths and respiratory ailment in children and people with weakened immune systems, it is well past the time that stricter standards should have been adopted.

We need to be better stewards of this land and the environment for ourselves and future generations.

Thank you for helping.

Sincerely,

Lisa & Joel Sanguinetti

Comment:

Californians everywhere are concerned about air pollution (one look at all the Priuses on the 405 should prove the point). Other industries, such as footwear and apparel, are taking steps to reduce the amount of pollution they generate. Construction is hugely damaging to the environment, yet has shown little interest in self regulating. This must change, and it must change now. Our lives depend on it. Thank you.

Comment:

It is essential to public health that the emmissions of ALL diesel powered vehicles be regulated. In-Use Off-Road Vehicles should be no exception; in fact these vehicles should be given more scrutiny than others since the are typically essentially point sources, and are less efficient than on-road diesel trucks.

Comment:

Dear CARB,

It's THIS simple, actually. Unless we start to truly protect our planet's natural habitats, embrace sustainable living and renewable energies worldwide we threaten our very own survival!! A U.N. study done by 1,300 leading scientists found that "Planet Earth is on the cusp of disaster". The scientists concluded that people should no longer take it for granted that their children and grandchildren will survive in the environmentally degraded world of the 21st Century! Shouldn't we try our utmost to prevent this from happening?!

The solutions are all out there - we only need to apply them! And that takes EVERYBODY, individual citizens, politicians, countries as well as corporations.

Sincerely,

John Hope

Subject: Adopt Regulations For In-Use Off-Road Vehicles!

Comment:

It is imperative, in this era of accelerated global warming to curb the pollution caused by construction equipment. It would be wonderful if this legislation were nationwide in scope but, for now, adopting the proposed bill to regulate in-use off-road diesel vehicles in California will go a long way toward curbing those behaviors that contribute to global warming. In a state with the greatest population in the nation and with all of the continuous construction that goes on in a state with such population, there has to be a legislated safeguard towards stemming the tide of global warming put out by Americans, specifically manufacturing and construction projects.

I urge you to adopt the proposed regulation without delay!

Cordially,

Tom Sanchez

Subject: Stronger standards for Construction Equipment

Comment:

Don't wait until it is too late -- and make no mistake, Mother Earth's "biological clock" is ticking. Not in anticipation of Life, but of Death ... unless something is done, and SOON.

I strongly encourage you to vote to strengthen state air standards and reduce air pollution from construction equipment, which is the second largest source of diesel pollution in the state. Diesel pollution accounts for 20% of particulate matter (soot) and 16% of smog-forming Nitrogen Oxides (NOx). These pollutants are two of the biggest pollution hazards for public health in California and throughout the country.

Whenever they are asked to behave like responsible corporate citizens, Big Business insists that such measures will add "prohibitive costs" to their profit margin. Surely the question is how the State can recoup OUR costs: the quality of air, of life, the increased demands for health care services, the lost work hours due to employee sickness and their time spent in caring for their children who are poisoned by the contaminants in the air.

Subject: Air Standards

Comment:

Exposure to smog can have serious effects on respiratory health. Inflammation and irritation of the respiratory tract can cause shortness of breath, throat irritation, chest pains and coughing, and lead to asthma attacks, hospital admissions and emergency room visits.

Particulate air pollution or soot can be inhaled and reach deep into the lungs. These tiny particulates can enter the circulatory system and damage blood vessels. Particulate pollution is associated with heart attacks, irregular heartbeat, asthma attacks, reduced lung function and bronchitis.

I don't need to tell you guys all this. You already have doctors and professionals that have done so for years and years. However, in honor of Mother's Day this weekend, I am writing on behalf of all my fellow mothers with children with Asthma and request that you do everything necessary to place stronger air standards for California's construction equipment.

If you do, you will be responsible for....

-- Preventing 4,000 premature deaths

-- Reducing health care and hospital visits of \$18 to \$26 billion

-- Helping to bring the most polluted areas of the state, the Los Angeles/Long Beach air basin and the San Joaquin Valley, into attainment with federal air quality standards

-- By 2020, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air.

So I suppose even the lobbying of the manufacturers of the equipment or the businesses that own or have to buy the equipment can't compare to those cost benefits.

But even without the money issues, which are also in OUR favor, it is about what is best for our kids. Because they are the loves of our lives. Literally.

Thank you and Happy Mother's Day!

Julie du Bois

Comment:

It is apparent that there is a crisis in our country because millions of people are suffering from asthma and related illnesses caused by air pollution. In the Central Valley of California, a very high percentage of the young are suffering from asthma. This proposed law can prevent 4,000 premature deaths each year. This proposed legislation if enacted could save the state of California and its people billions of health costs. It's time to attack the problem of construction related pollution and this is a good time to start. If we continue to allow the construction industry to do business as usual, millions of people will continue to become ill and suffer serious health problems. This is a chance for our government to do the right thing and protect the people from air pollution.

Comment:

We need to reduce the amount of pollutants released into the atmosphere in California. A major source of air pollution in this state is coming from diesel operated construction equipment. Poor air quality causes and contributes to serious health problems. I feel that the passage of the proposed regulations would in time significantly reduce air pollutants and create a healthier environment for all Californians.

Subject: Higher air quality

Comment:

Poor air quality has such a negative impact on our lives; thousands of premature deaths from heart and lung disease, asthma (especially in children with developing lungs), bronchitis and heart attacks just to name a few. Construction equipment is the second largest source of diesel pollution in the state of california. Please help limit the toxins released by use of diesel by setting higher air standards. We can only benefit from such a resolution. But if we fail to reduce the toxins in the environment, we stand to loose a lot.

Subject: Air pollution and construction equipment  
Comment:

Dear Members of the California Air Resources Board:

On May 24, 2007 I urge you to vote FOR the proposed new rule to reduce air pollution from construction equipment. As you already know, this equipment is the second largest source of diesel pollution in California. Two of the biggest pollution hazards for public health in California are soot and nitrogen oxides, big components in diesel exhaust.

In the newspapers this week Los Angeles had the dubious honor of being the most polluted city in our entire nation. We need to bring our State's polluted areas into compliance with federal air quality standards and Californians deserve better air for their health.

Please support stronger air standards for California's construction equipment and thereby help clean up our air.

Respectfully submitted,

Freda Hofland  
Los Altos Hills, CA

Subject: controlling diesel emission

Comment:

We strongly support the formation of requirements that all diesel emissions in CA be reduced and regulated. We know the harm these chemicals and particulates cause to humans. You have a real opportunity, now, to regulate construction equipment. Please lead the nation, once again in protecting our air and our health. After market devices are available, but are not being utilized to assuage this problem. Cleaner vehicles could be built, but you can bet they won't be - if you don't enact tough standards. Standards are only as good as they are enforced, so let's also make sure there is considerable thought put into implementing and enforcing these new regulations. San Diego County, where I live continues to struggle with particulates and has remained in a state of non-attainment for far too long. These new regulations would help to remedy that situation. Go after trucks too, with the new ones coming over from Mexico, they will enter our country with gas that is not reformulated, as it is CA for cleaner air, this too will burden our county, and add to the particulate load, making attainment even harder.

Subject: Clean Air

Comment:

The California Air Resources Board (ARB) is scheduled to vote on a landmark rule to strengthen state air standards and reduce air pollution from construction equipment, known technically as "In-Use Off-Road Diesel Vehicles."

California needs cleaner air. I support this proposed rule because it will:

-- Prevent 4,000 premature deaths;

-- Result in health benefits and reduced health care and hospital visits of \$18 to \$26 billion;

-- Help bring the most polluted areas of the state, the Los Angeles/Long Beach air basin and the San Joaquin Valley, into attainment with federal air quality standards; and

-- By 2020, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air.

Seems like an obvious minimal choice, doesn't it.

Subject: I Support the Proposed Regulation for In-Use Off-Road Diesel Vehicles

Comment:

I support stronger emissions control standards for California's construction equipment, and I support the proposed regulation that mandates less pollution for In-Use Off-Road Diesel Vehicles. Please approve this rule and help bring the most polluted areas of the state, the Los Angeles basin and the San Joaquin Valley, into attainment with federal air quality standards.

Thank you,  
Justin Dunscombe

Comment:

Please do something meaningful about particulate air pollution from diesel engines. It is time that industry using diesel engines came into line with the rest of us on particulates. My son has pre-asthma and anything you can do that would help keep his condition from escalating into full blown asthma would be significant. It is a shame what we are doing to our children in the name of progress. I guess its a matter of whose pocket book it is. Well, mine also votes.

Subject: diesel pollution and air quality issues

Comment:

As a person with asthma -- only gained in the last seven years when I moved to California! -- I am horrified at the air quality I find in this beautiful state. There are days when it's not safe for me to be outside breathing the vehicular pollution, smog and other causes of bad air. And the amazing thing is, I live in rural Nevada County, where we have no major polluting industries, just small populations and lots of forest! ALL of our air pollution comes from Sacramento and the Bay Area communities, and hits us right in the eyes -- and lungs!

It is imperative for the health and ecological balance of this great state and its people that vehicular emissions be severely restricted; otherwise, our children, elders and those like me with respiratory problems are doomed to a life of inadequate oxygen intake.

I KNOW it is possible to minimize the damage these polluting vehicles do to the air; PLEASE do all you can to make this state's air safe for us to breathe.

Thank you for your sincere consideration for the health of California's citizens.

Subject: May 24th vote  
Comment:

On May 24, please take action to help clean up our air by voting to adopt a new rule to reduce air pollution from California's construction equipment.

This is especially important to me as I live in the Long Beach basin where our air is NOT up to federal standards and adoption of this rule will help bring the quality of our air up to the standards set by the federal government but not yet met by your board.

If adopted, you will have prevented 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air by the year 2020. In addition you will help prevent 4,000 premature deaths due to air pollution and reduce the cost of treating these conditons by about 8 billion dollars.

Subject: Strengthen restrictions on "In-Use Off-Road Diesel Vehicles"

Comment:

As the grandson of an Epidemiologist and activist who fought for Clean Air standards, I urge you to strengthen the restrictions on emissions from In-Use Off-Road Diesel Vehicles. These emissions, which I understand can account for up to 20% of the soot we breathe here in CA, and 16% smog (NOx), both of which have been proven to contribute to health problems and cost us dearly in the form of premature deaths, long term health problems, and increased costs to health care and insurance.

As I understand it this new rule will: prevent 4000 premature deaths, result in reduced health care bills and hospital visits to the tune of \$18-26 BILLION dollars, and, by 2020, prevent 48 tons per DAY of NOx and 5 tons per day of particulate matter from entering our air.

Please please please strengthen the standards on pollution restrictions of In-Use Off-Road Vehicles (aka construction equipment).

Thank you.

I live in California. I came to this State in 1978, with clean and perfect lungs. Now I suffer from allergies and bordeline asthma, wich increases when smog is present. I can hardly go out when the Santa Ana blows. The doctor says it is due to environmental causes. I believe it is due to the unbelievable pollution we live in due to many causes, one of them -and not the lesser- is these Diesel vehicles, which comprise 20% of what causes this pollution.

It is in your hands now to listen to people like me and others who have the best interest of our State and everyone's health in our hearts and take action to correct this unbalance.

Thank you for listening.

Subject: Diesel Emissions need to be reduced

Comment:

The diesel air pollutin from in-use off-road vehicles (such as road construction vehicles) causes thousands of premature deaths and is a major contributor to smog. As a PhD student at Stanford University studying air pollution, I know how bad diesel emissions can be when they are not regulated properly. Not only are particulates extremely bad for human health (espeically for workers who are around the emissions all day), they are often soot - which is a direct contributor to global warming and studies show that it may be second in importance after CO2 in terms of its impact on global warming.

Please strengthen the emissions standards and reduce the amount of air pollution in some of the most polluted areas in our state.

Thank you for considering my comments.

Sincerely,  
Diana Ginnebaugh

Subject: Promote clean diesel in California

Comment:

Diesel engines are inherently more efficient and although high sulfur diesel fuel prohibited clean technologies that has changed as refineries are now providing a cleaner fuel that opens up the way for clean diesel engines.

Mercedes, Volkswagen and other manufacturers are now marketing clean diesel engines. It is time to stop prohibiting diesel engines from being marketed in California.

Diesel engines are well adapted to using biodiesel and vegetable oil and as such are in the best position to help advance the best biofuels. Biofuels can be created using algae grown from sewage. A company in New Zealand is already producing bio fuels using this technology. A study conducted at the University of New Hampshire a couple of years ago concluded that algae based bio fuels could fuel the entire US transportation industry.

I drive a VW Jetta TDI and use 100% biodiesel made from recycled vegetable oils that have previously been used in restaurants or other food factories. It required no modification to the engine and burns much cleaner than petro diesel. It can be mixed in any ratio with petro diesel so it is easy to handle road trips where I may not be able to find biodiesel.

Subject: I support regulating construction-vehicle emissions  
Comment:

As someone who works in the design and construction industry, I am writing in support of stronger regulations on emissions from construction equipment. I recently read that you will vote on this issue on May 24.

The soot and smog-forming nitrogen oxides from these vehicles add substantially to our state's air pollution, and thereby endanger the health of Californians. Keeping adults and children safe from respiratory problems should be a top concern for the ARB.

Construction should not have to involve pollution-spewing equipment. For example, I work in a landscape architecture firm, where I design parks and gardens. I believe that this work is generally good for society, but I know that today's methods of construction cause harm to a job site before my project can improve it. Some people will argue that tighter standards on emissions will raise the cost of construction and cost jobs, but they will be looking at only part of the picture. The savings in health-care (around \$20 billion, in an estimate I read), fewer illnesses, fewer missed workdays, fewer premature deaths, and other ecological benefits will be worth more.

California is known for leading the nation in protecting our citizens' health and environment -- a track record to be proud of. Please continue our state's leadership on worthy causes like this one.

Thank you for allowing me to comment.

Comment:

California should have some of the best air quality in the US not the worst.

Pollution takes a toll on the economy by virtue of the costs which are accrued in dealing with the effects bad air has on health, agriculture, tourism and wildlife.

Off-road diesel is now a major source of the worse kinds of air pollution.

It is high time that all pollution sources be controlled for the common good.

I strongly urge the ARB to please regulate these off-road diesel vehicles' emissions.

Thank you.

Subject: support stronger air standards for construction equipment

Comment:

Please limit particulate pollution from construction equipment. Particulate air pollution or soot can be inhaled and reach deep into the lungs. These tiny particulates can enter the circulatory system and damage blood vessels. Particulate pollution is associated with heart attacks, irregular heartbeat, asthma attacks, reduced lung function and bronchitis.

These health impacts result in tens of thousands of premature deaths in the U.S. from heart and lung disease annually, as well as hospital admissions, emergency room visits, absences from school or work, and restricted activities related to asthma attacks.

Bold action today as prevent 4,000 premature deaths. There is no penalty for poisoning our air and water. However we have no choice about breathing a different air. Thank you for considering these restrictions. The health and welfare directives of the constitution has only been taken seriously in Californian.

Subject: Proposed Regulation for In Use Off Road Diesel Vehicles

Comment:

Please adopt this proposed regulation.

Construction pollution is a large source of diesel pollution in the state. We know that smog has effects on respiratory health.

This rule will help prevent premature deaths, result in health benefits and significantly reduced health care and hospital visits;

help bring the most polluted areas of the state, the Los Angeles/Long Beach air basin and the San Joaquin Valley, into attainment with federal air quality standards; and, over time, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air.

Your action in this important area would be very much appreciated.

Comment:

California desperately needs to do everything it can to reduce pollution, and I urge you to take action now when it's possible and we have the opportunity to start improving things. We should not put the environment and public health on the back burner when we are one of the most wealthy states in one of the most wealthy countries in the world. Any action taken to reduce pollution will be a step in the right direction.

Subject: Favor proposed off-road diesel vehicle regulations

Comment:

Because construction equipment is the second largest source of diesel pollution in the state, accounting for 20% of particulate matter (soot) and 16% of smog-forming Nitrogen Oxides (NOx), I hereby recommend adoption of proposed regulations on emissions from such vehicles.

Exposure to smog can have serious effects on respiratory health. The reduction of pollution will have an enormous positive effect on the health of California's citizens.

Subject: In-Use Off-Road Diesel Vehicles smog regulation.

Comment:

Please bring "In-Use Off-Road Diesel Vehicles" into smog regulation.

If a vehicle is operated, the owner is responsible for the total "cost" of operation. Automobiles pay the price by keeping there cars smogged and maintained. "In-Use Off-Road Diesel Vehicles" should pay the full cost of operation and not pass the cost on to others in the form of smog.

Please bring these vehicles into compliance.

Subject: Proposed Regulation for In-Use Off-Road Diesel Vehicles

Comment:

I lost a brother to lung disease so I am particularly interested in this pending regulation.

Construction equipment is the second largest source of diesel pollution in the state. Diesel pollution has a real impact on public health in California and throughout the country.

I know from personal experience with my brother how exposure to smog can have serious effects on respiratory health. Particulate air pollution or soot can be inhaled and reach deep into the lungs. These tiny particulates can enter the circulatory system and damage blood vessels. Particulate pollution is associated with heart attacks, irregular heartbeat, asthma attacks, reduced lung function and bronchitis.

I urge you to adopt this proposed regulation in the interest of public health and better air quality overall. Thank you.

Subject: Please vote to reduce pollution from construction equipment

Comment:

California can once again be a leader for other states in reducing diesel pollution. Construction equipment is the second largest source of diesel pollution in the state of California. Exposure to smog and soot from diesel fuel can have serious effect on respiratory health. These health impacts result in tens of thousands of premature deaths in the U.S from heart and lung disease annually, and place an unnecessary strain on our medical services. Children are especially vulnerable because their lungs are still developing.

Here at Lake Tahoe where I live we passed a ban on two stroke engine water crafts on the lake. Many protest the change initially, but after the law was passed, everyone adjusted. Businesses that rent water crafts purchased new jet skies or boats and now the lake is cleaner and everyone has adjusted. The same will be true when you try to pass this reduction of construction equipment pollution. You will hear arguments that it is too restrictive or requires change too fast. But, in the end, everyone will adjust when you pass your changes. And California will have cleaner air. And we can continue to lead the way in helping to fight global warming.

Thank you for hearing my opinion.

-Lewis Kawecki

Subject: Air standards for In-Use Off-Road Diesel Vehicles

Comment:

You have the opportunity to reduce the damage done, especially to children in low income neighborhoods close to industrial areas. Respiratory diseases may begin early in life and may manifest themselves immediately or later, progressively over many years. These debilitating diseases have far reaching effects on the victims, their families, our health system, our labor productivity - you name it. It particularly impacts those with the least resources to manage those difficulties.

The Air Resources Board needs to regulate those who would put corporate profits over the rights of people to a healthy environment. Reducing the air pollution from construction equipment is well within our technological capabilities. Greed and immorality prevent those responsible from voluntarily cleaning up their acts. Strengthening the laws that will protect the health of Californians is simply the right thing to do.

Comment:

California is a wonderful place, but air pollution is tainting our Golden State. Stricter air pollution standards on construction equipment would save lives and save money and our beautiful landscape. Estimates put the money saved from reduced health care costs associated with stronger air pollution standard for construction equipment at over \$10 billion!

16% of Nitrogen Oxides and 20% of particulate matter are the result of these dirty construction machines. Something needs to be done!

Stricter standards must be implemented for construction machinery and it needs to be done now!

I understand that you will soon be voting on new regulation of In-Use Off-Road Diesel Vehicles. I support strengthened state air standards and reduced air pollution from construction equipment.

As a Californian, and someone who lives just off the 210 at the intersection of the Angeles Crest Highway on-and-offramp, I heartily support passage of this rule.

My brother drives a backhoe for Penhall. He'll benefit, too, from breathing in less toxic fumes as he works.

Californians will again lead the way for the nation as we reduce particulate matter and nitrogen oxides. The resulting reduction in health care costs alone will change California's quality of life for the better.

Thank you for supporting stronger air standards.

Comment:

Do what it takes to help clean up the air in California. The pollution from construction equipment is one of the worst. The popularity of our state continues to require the use of this equipment, so, unless measures are taken, air quality will only worsen. Let's save lives and make decisions that will improve Californians' health.

Comment:

To Whom It May Concern:

I have just been made aware that the California Air Resources Board (ARB) is scheduled to vote later this month on a rule to strengthen state air standards and reduce air pollution from construction equipment, known technically as "In-Use Off-Road Diesel Vehicles."

I am sending this e-mail to request that you do vote to strengthen these standards. California needs cleaner air and this must be accomplished at all costs, not only for today, but also for future generations. Please - the health of our population and environment are in your hands.

Thank you for your assistance in this matter,

Julie Nevins-Gabrion

Subject: Support Proposed Tegulation for In-Use Off-Road Diesel Vehicles

Comment:

As Bay Area air pollution particularly affects Livermore & Pleasanton, the cities where I live & work respectively, I am strongly in support of making regulation for off-road diesel vehicles stronger to control our air pollution problem, My family members and patients have lung disease which is badly affected by air pollution. In my work as a Registered Dietitian, I encourage people to get outside and participate in physical activity to improve their health. Many people are unable to be active outside due to poor air quality many days of the year. We need stronger regulation of off-road in-use vehicles to decrease the air pollution in California.

Comment:

We don't need adequate air pollution regulations. We need very stringent rules so that we can stay healthy and alive on this planet.

Eliminate pollution wherever you can, and in this case, with construction equipment, there is a tremendous need to do so. I am in construction myself, yet I am not willing to put up with this lack of political will that allows diesel fuel to fill the air. There is no economic excuse to allow this poison into our lungs.

Thanks,  
Mark Tokarczyk

Subject: Off road diesel regulation

Comment:

Off road Diesel Vehicles are the second biggest polluters. It is past time for these vehicles to be regulated. The Los Angeles/ Long Beach area ranked as the worst city in the country for air pollution. This is a health issue for the people of this state. It not only effects our people locally but is also a global issue. California should take the lead in this and become a model for other states. Isn't it about time the people of this state expect the government that represents us to help protect their health?

Comment:

Your board should consider all sources of air pollution, when you impose regulations. That means not only gasoline-burning road vehicles, but diesel-burning road vehicles, and diesel-burnnig off road vehicles. Construction machines should not get a free pass to pollute the air. Nor should diesel-burning agricultural pumps and other similar equipment.

Every polluting source should be regulated without favortism, or grandfather clauses.

Subject: Protect the Air for Californians - Reduce Pollution from In-Use Off-Road Diesel Vehicles

Comment:

I have asthma and allergies. As such, air quality is not a theoretical concern for me. It is a real concern affecting my daily health, well-being, and productivity.

As such, I am writing to you to ask you to please adopt the most prudent and health conserving regulations for in-use off-road diesel vehicles in California. This will help me and others maintain our personal health - but also that of the environment more generally.

And please make sure that whatever regulations you put in place that they are well supported enough to be enforced regularly and with confidence.

Again, to protect the general health of our state, it is imperative that the state strengthen state air standards and reduce air pollution from construction equipment or what you all call "In-Use Off-Road Diesel Vehicles."

Doing so will continue California's role as a leader on environmental issues. It will also help, hopefully, to turn around and reduce what is the second largest source of diesel pollution in the state - and what may be a crucial puzzle piece to in escalating problems related to asthma attacks, reduced lung function, bronchitis, and a host of other respiratory and cardiovascular problems.

What is the benefit - decreased health care costs, increased worker productivity (breathing helps!), improved quality of life, and all the related economic benefits that go along with these things for the California economy.

Again, please do what you can on this matter. I follow air pollution legislation with interest and look forward to seeing how this is handled.

Thank you for your consideration of my request for you to reduce pollution from in-use off-road diesel vehicles through adoption of proposed regulation of these vehicles.

Subject: An opinion on "In-Use Off-Road Diesel Vehicles"  
Comment:

Dear Boardmembers,

You have before you an opportunity to do good for millions of people.

As you may know, exposure to smog can have serious effects on respiratory health, and lead to hospital admissions and emergency room visits. Particulate pollution is associated with heart attacks, irregular heartbeat, asthma attacks, reduced lung function and bronchitis.

These health impacts result in tens of thousands of premature deaths in the U.S. from heart and lung disease annually, as well as hospital admissions, emergency room visits, absences from school or work.

This new rule will result in reduced health care and hospital visits currently costing society \$18 to \$26 billion.

On May 24, please vote to reduce air pollution.

Thank you.

Sincerely,  
Ken Faber

Subject: Stronger Rules to Reduce Air Pollution from Construction Equipment  
Comment:

Please support and adopt stronger regulation to reduce air pollution from construction equipment in California. At present construction equipment is the second largest source of diesel pollution in the state, producing 20% of particulate matter and 16% of smog-forming Nitrogen Oxides (NOx). This pollution is a serious hazard to public health. It is our understanding that the proposed new regulation would by 2020 prevent 48 tons per day NOx and 5 tons per day particulates from entering the air we all breathe.

Thank you for your inclusion of this comment in your deliberations.

Sincerely,  
Lis and David Fleming  
Davis, CA

Subject: Adopt the regulation

Comment:

As a native Californian who now suffers from adult-onset asthma and other progressively worsening respiratory problems, I have a personal interest in stronger standards for California's construction equipment, which accounts for 20% of particulate matter (soot) and 16% of smog-forming Nitrogen Oxides (NOx), two of the biggest pollution hazards for public health in California and throughout the country.

Exposure to smog can have serious effects on respiratory health (shortness of breath, throat irritation, chest pains and coughing) and lead to asthma attacks, hospital admissions and emergency room visits. Particulate air pollution or soot can be inhaled, reach deep into the lungs, enter the circulatory system and damage blood vessels. Particulate pollution is associated with heart attacks, irregular heartbeat, asthma attacks, reduced lung function and bronchitis.

Please adopt the proposed regulation and help prevent 4,000 premature deaths; reduce health care and hospital visits of \$18 to \$26 billion; help bring the most polluted areas of California (the Los Angeles/Long Beach air basin and the San Joaquin Valley) into attainment with federal air quality standards; and by 2020, prevent 48 tons per day of NOx and 5 tons per day of particulate air pollution from entering our air.

Thank you.

Subject: Diesel Vehicles  
Comment:

When you vote on May 24th, please support stronger actions to  
reduce pollution from ALL diesel engines...

Thank you for your concern in this important matter,

Tom Nulty, Jr.  
Dana Point

Comment:

Please adopt tougher air-quality standards for in-use off-road diesel vehicles. Air pollution is just going to get worse with growing population & global warming. We need to do more starting NOW.

Comment:

We have all benefitted from cheap energy and cheap products at the expense of our health, our environment and our future. The construction industry and other industries which use off road diesel engines need to clean up their act. Although this will cost us all some money, it will be a whole lot cheaper to fix the problem now than it will be to fix it later.

Please support the In-Use Off-Road Diesel Vehicles rule.

Thank you.

Sincerely,

Douglas C. Estes

Comment:

I would like to voice my support for reducing the emmissions caused by "In-Use Off-Road Diesel Vehicles". The health benefits for cutting this diesel pollution will be incredibly beneficial.

Subject: Please Adopt the Proposed Regulation For In-Use Off-Road Diesel Vehicles

Comment:

Since construction equipment is the second largest source of diesel pollution in California and because air pollution has serious health and environmental consequences, I strongly urge you to approve this regulation. It will reduce health impacts from air pollution and, by so doing, it will improve the quality of life for many Californians - especially in some of the most polluted parts of the state, like the Los Angeles/Long Beach air basin and the San Joaquin Valley.

Thank you very much.

Comment:

we need cleaner air. the technology is there for diesel engines.  
tighten the regulations now. any costs businesses will incur is  
going to get passed through in the form of higher prices anyway.  
We get the added cost of higher medical from the dirty air from  
increased asthman, lung disease, etc.

Subject: Regulation of In-Use Off-Road Diesel Vehicles

Comment:

I urge the Board to vote to enact this regulation at the May 25 meeting. It is the fruit of much time and stakeholder input. It is fair to the construction industry and does much to improve the air and quality of life for all Californians - including construction workers who must breathe closest to the source of diesel emissions. Please act Friday so that we can proactively begin the process of avoiding the millions of dollars lost to hospitalizations, sick days, illness and lost activity time for our children. Your work and vote on this issue is crucial!

Comment:

As a mother with a 2 year old who has asthma, I urge you to think of how you're decisions affect children. Until you know what it's like to not sleep well for a week once a month because you have to monitor your child's breathing...maybe then you will understand how important clean air is for all of us.

Subject: Reduction in diesel pollutants by construction equipment

Comment:

Dear Sirs - respiratory diseases are caused by diesel emissions.  
We need to reduce these emissions as much as possible to protect  
our children, families and environment. We definitely need  
stronger standards for construction equipment (and all other  
sources) to emit less pollutants.

Comment:

Dear Board Members:

It is very important that we take all steps necessary to reduce pollutants in the air for the health of all of our citizens as well as the health of the environment in general. This is especially true for the Los Angeles area which currently has some of the worst air quality in the nation.

The Proposed Regulation for In-Use Off-Road Diesel Vehicles should definitely be passed and implemented as soon as possible.

Thank you.

Sincerely,

Marilyn Jones

Subject: Regulations are needed for off road vehicles  
Comment:

Dear CARB,

I am writing to express my strong support of tougher regulations of diesel emissions from off road vehicles. I feel that corporations are not doing their fair share of keeping the air clean here in California. They should not have a free pass to pollute our air. I feel that the current air quality is very very poor. The particulate count is so high I can find a level of soot on my car and in my home after just a few days. To think what those particles are doing to the inside of my body.

I feel that these regulations will help clean up our air and will actually create some jobs and a whole industry to help retrofit and clean up these dirty machines.

I urge you to adopt the strongest regulations possible as soon as possible. If the technology exists or can exist we should implement it. Our health depends on it.

Thank you.  
-Peter Berg

Comment:

To whom it concern,

I support air quality regulation for off road construction equipment. Although I do believe the ARB would better serve our public if it spent its efforts and resources on regulating motorcycles, street trucks, and cars who have their exhaust systems motified. They are dropping their catalitic converters and mufflers. These vehicals are not only today's primary source of noise pollution they are putting toxins directly into the air. Law enforcement says they do not have the personnel to enforce current regulations. Offenders laugh and say it would only be a fix it ticket and the only time you would see a cop looking under a car is when he has dropped a donut (that disrespectful comment is a direct quote]. I would like to see the California Environmental Protection Agency regulate this problem. I believe they could do a better job than law enforcement.

Subject: Construction Rule

Comment:

Dear Chair Nichols and Board,

Construction equipment is a major source of pollution in the San Joaquin Valley and as such, contributes greatly to the public health crisis we are experiencing here.

Please consider such measures that would most effectively and expeditiously lead to emission reductions from this source in order for us to breathe clean air as soon as possible. To that end, I think that annual target reductions for PM pollution are essential to ensure effective benchmarks are met to reach our goals of clean air in the Valley.

Thank you for your consideration.

Mary-Michal Rawling
