Subject: Support for higher reduction targets from land use sector  
Comment:

Business-as-usual from the land-use sector is just not an acceptable path. All sectors of our economy need to make changes to reduce greenhouse gas emissions and secure a better tomorrow for our children.

Development that is friendly to walking, biking, and transit is better for the environment, and makes California a better place to live and work.

CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT.

As always, the rest of the country is watching, and it is our responsibility to lead by enacting common-sense policies that will make a difference.

Subject: AB 32 Scoping Plan  
Comment:

To whom it may concern:

In order for California to address the climate crisis it will require our local governments to change they way they build their communities. SB375 is only the first step and ARB must require local government to take additional steps including the following:

- \* Global warming is the challenge of our generation. Meeting this challenge requires fundamental changes in the way we grow our communities.

- \* CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of C02 equivalent (MMT) to 11-14 MMT.

- \* As shown by the analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson, the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering.

- \* Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming. Conversely, a low target will send the signal that business-as-usual development should continue, and that land use reform is a low priority for California.

- \* A higher target must becoupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Jonathan Evans  
Berkeley, California

Comment:

Please raise the land use sector well above the 5 million metric tons of CO2 equivalent. It should be raised to at least double and ideally triple the MMT you now are considering. You need to build in support for local jurisdictions-- otherwise developers will continue to rule my non-attainment area of Riverside Co.

Subject: AB 32 Scoping Plan and land use

Comment:

As a Planning Commissioner, I know all too well how entrenched traditional land use patterns are in our communities. Changing that will be difficult, but change it we must. Now is our opportunity to aim large, while the economy is keeping development in abeyance. Local governments need very strong leadership, and assistance, from CARB to help us steer in a more sustainable direction. As one example, the goal of 5 MMT is too low for a land use target. We simply cannot keep doing business as usual anymore, and that means pushing all of us outside our comfort zones. The development interests have to adapt to the reality of climate change, and local governments need help bringing about that change.

Comment:

The 5 million metric ton CO2 goal is inadequate and will not result in the significant levels of change that must be achieved.

10 to 11 MMT is appropriate.

It is essential that we set our goals as high as possible. In order to have any real effect on the crisis of Global Warming, we must begin building our communities in very different ways -- deemphasizing the dependence on the car and emphasizing local pedestrian access to daily needs, along with good and frequent locally serving public transit.

Setting such significant goals will likely result in a new wave of investment energy - especially if provision for "housing cars" is significantly reduced.

## **Form Letter 12 for Comment 320 for AB 32 Scoping Plan (scopingpln08) - 45 Day.**

First Name: Dale  
Last Name: Smith  
Email Address: drdalesmith@aoaconsult.net  
Affiliation: Alfa Omega Associates Consulting

Subject: Please don't GUT AB 32

Comment:

Alfa Omega Associates is a land-use, environmental protection and historic preservation consulting firm based in Auburn, California with clients in several counties in Northern California with hundreds of constituents. For 15 years AOA has served community groups from as far north as Eureka and as far south at Marina Del Rey. On the behalf of clients in El Dorado, Placer, Colusa and Yuba Counties we have filed comments like this on AB 32.

Global Warming-Consistency with Assembly Bill 32 "Global Warming Solutions Act of 2006"; reducing the emissions of GHGs (Green House Gases), counteract the effects of global warming and protect residents from the adverse effects of global warming. The issue of human-caused, or anthropogenic, climate change (global warming) is becoming a central focus of the Green movement. Around the world, there is an increasing awareness of the importance of climate change as a factor in a range of issues. Many environmental, economic and social issues find common ground in the form of climate change. Individual and political action on climate change can take many forms, all of which have the ultimate goal of limiting and/or reducing the concentration of greenhouse gases in the atmosphere.

Alfa Omega and its clients believe that CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT.

As shown by the analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson, the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering.

We ask you CARB board members, when you vote on the Scoping Plan later this week, please continue to strengthen California's commitment to fight global warming by curtailing sprawl. It would be tragic to give into development political pressure. Don't gut AB 32 -- is our plea.

Subject: Keep the Bar High

Comment:

As an organization dedicated to the protection of forests, and all the benefits forests provide, including carbon sequestration, we strongly urge the CA Air Resources Board to maintain high land use targets in the AB 32 Scoping Plan - to at least double the MMT by 5 million metric tons to 10 MMT, preferably higher.

The 5 MMT target is inadequate - it is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering.

Setting a higher target for the land use sector will help establish new land use patterns that make fighting against global warming a high priority.

A higher target must be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Please raise the the land use target in the AB 32 Scoping Plan from 5 million metric tons of C02 equivalent (MMT) to 11-14 MMT.

The 5 MMT target is based upon outdated transportation models that are widely acknowledged to underestimate the benefits of dense, mixed-use development.

Development without any sort of environmental goal is the reason that California's communities are so auto-dependent. This will not change without a powerful target.

Comment:

It is perhaps our greatest present responsibility to address with all the force we can muster the global warming crisis that we have created and that jeopardizes the health and well-being of everyone on the planet now and for generations to come.

California must take the lead in changing our land use and development patterns, ensuring that we implement strong measures to restrict sprawl and to highly promote and reward dense, compact, mixed-use, transit-effective, resource-efficient, walkable, healthy development.

CARB must raise the land use target in the AB32 scoping plan from the current paltry 5 MMT of CO2 equivalent to at least 14 MMT.

Business as usual got us into our current disastrous mode; business as usual will not get us out, and we have no time to lose in changing our ways.

California must commit the financial and technical resources and the political will and example to help regions, local governments, and transportation agencies to reach the 14 MMT target. The expense and effort required to achieve this goal will be minimal compared to the expense and effort entailed by the consequences of not meeting it.

We are counting on you to do what must be done now. The world is watching us. It's time to change.

Thank you.

Subject: AB 32 Scoping Plan/land use reform  
Comment:

Dear Members of the Air Resources Board,

It is imperative that the land use target in the AB 32 Scoping Plan for greenhouse gas reduction be raised from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT. The benefits of dense, mixed-used development are not only substantial, but achievable with policies that are already under consideration. A low target will send the wrong signal, namely that business-as-usual development should continue, that land use reform is not a high priority, and that continued urban sprawl is an acceptable form of urbanization. It is not! We need a higher target, a commitment to provide financial resources, technical assistance, and other needed support to help regions, local governments and transportation agencies achieve the target.

Global warming is no joke! It is real, threatening to the well-being of all life on the planet, and the time for REAL action is now! Thanks you for consideration of these comments. Please vote for the future of life in our state and on earth.

Subject: Scoping Plan must include hard goals for reducing VMTs  
Comment:

Chairwoman Nichols and CARB Board Members:

We strongly urge the board to clearly address land use planning and zoning issues as part of your final adopted scoping plan. Southern California regional transportation planning agencies and local jurisdictions have traditionally ignored air quality and greenhouse emission issues as part of their development planning processes. We would like to see the following issues addressed in your final scoping plan:

Global warming is the challenge of our generation. Meeting this challenge requires fundamental changes in the way we plan and develop, and redevelop our communities.

CARB should raise the land use planning GHG reduction target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT. As shown by the analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson, the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering. In addition to GHG reduction goals, we believe that CARB should include mandates that local planning efforts result in substantial reductions in overall Vehicle Mile Trips (VMTs) in each region affected by the CARB's final plan.

Setting a higher target for the land use planning sector will signal to the world that refining traditional land use planning and development patterns is a high priority in the fight against global warming. Conversely, a low target will send the signal that business-as-usual sprawl development should continue, and that land use planning reform is a low priority for California.

A higher target must be coupled with a commitment to provide federal and state financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Thank you for considering these comments.

Comment:

Stopping global warming is extremelu important.

CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT. The analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson shows that the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering. Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming.

A higher target must be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

DEar CARB,

As a resident of CA for for 47 years, I have seen the destructive results of "business as usual". I have been a member of Sacramento Audubon since 1967, and served from 1993 to 2006 as Conservation Chair. The depredations on habitat are plain to see. We must have a high land-use target with full support for the new use goals.

Respectfully,

Mary Bisharat

Subject: increasing land use target for reducing CO2 emissions  
Comment:

As a Professor of Environmental Studies, at the University of California, Santa Cruz, I know what a monumental threat global warming is to humans and the ecosystems on which we depend. California has taken a leadership role in addressing this threat by passing AB32, but we need to aim for more aggressive reductions in CO2 emissions in order to really make a difference in slowing the pace of global warming.

One feasible way to do this is to make changes to how communities grow. I am writing to urge CARB to raise the land use target for AB 32 from 5 million metrics tons of CO2 to 11-14 (MMT). Analysis have showed that this is feasible by using dense, mixed-used development.

It is important that California demonstrate that such standards are feasible, as many states and country are looking to California as a role model for global warming legislation. We have to be working on all fronts to slow CO2 emissions and one of the important pathways to do this is through development patterns. Thank you for raising the land use target.

Subject: AB32 Scoping-Higher Land Use target  
Comment:

Honorable Chair and Members of the Air Resources Board:

I am writing in strong support of CARB raising the land use target in the AB 32 Scoping Plan beyond 5MMT. A more forward-thinking and assertive target of 11-14 MMT is achievable; especially when combined with a commitment to provide financial resources, technical assistance and other support to help regions, local governments and transportation agencies achieve the target.

Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming. Conversely, a low target will send the signal that business-as-usual development should continue and that land use reform is a low priority for California.

Global warming is the challenge of our generation. Meeting this challenge requires fundamental changes in the way we grow our communities. I sincerely hope that CARB will press for the best that we can do in California at this critical juncture in considering land use and its role in global warming.

Thank you for this opportunity to comment on this vitally important matter.

Sincerely,  
Lynne Harkins

Subject: CARB AB 32 Scoping Plan  
Comment:

Reducing the carbon emissions that contribute to global warming is one of the critical challenges of our time. California must learn to live sustainably, and not continue to capitalize the resources needed for future generations, particularly its land resources. Since 1990, more than 500,000 acres of land has been urbanized in California (Edward Thompson Jr., 2007), and the rate of development has increased exponentially. This is a trend that simply cannot continue. Farmland not only provides food and serves as habitat for wintering waterfowl and other wildlife species, it acts as a carbon sink to offset the emissions generated with other land uses (Sloan et al, 2005).

CARB has an important opportunity to recognize the devastating effects of past land use practices in California that have resulted in sprawl - low density, auto dependent communities located far away from job centers that have increased our dependency on automobiles, increased the cost to taxpayers of maintaining road and service infrastructure, negatively impacted family and community life with long commutes, eliminated wildlife habitat, permanently reduced our available supply of food production resources, and increased the amount of carbon emissions released into our shared atmosphere from vehicle miles traveled. A shift in the way we plan and build communities in California needs to happen. This shift can be accomplished in ways that create economic opportunity, but it won't come about with out clear direction from the State that current land use and development practices need to change.

Increasing the target emission reduction for land uses from a paltry 5 MMT to at least 11-14 MMT will send a strong signal to local communities to make the important shift to a more condensed land use model that makes better use of infill opportunities, public transportation alternatives to private automobile use, reduces infrastructure costs, and ultimately achieves a better quality of life for all Californians while substantially reducing the carbon emissions that are contributing to the climate change problem. Please increase the emission reduction requirements in the land use sector of the AB 32 Scoping Plan to 11-14 MMT to send the signal that our shared environment depends on making significant changes in the way we design and develop communities.

Subject: Land Use in the Scoping Plan  
Comment:

There is no time to lose, and no measure to weaken, if we are to meet the challenge of climate change. The changes that will be wrought by nature, if we settle for inaction or half measures, will be far more severe than any far-reaching measures we take now. CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT. This higher target is achievable with policies California is already considering. Setting a low target will allow business-as-usual development to continue, and there is no realm in which business-as-usual will suffice to modify or reverse the impacts of climate change. The higher requirements may be expensive, but as Al Gore has said, if we think mitigated climate change is expensive, try unmitigated climate change. This is the moment to act boldly.

Subject: Emission reduction target for the Land Use sector  
Comment:

Dear Sir or Madam,

Thank you for providing this opportunity to comment on the AB 32 Scoping Plan. Global warming is the challenge of our generation. Meeting this challenge requires fundamental changes in the way we grow our communities.

As an urban planner and concerned citizen, I feel it is very important that the CARB Board act aggressively to cut CO2 emissions by setting appropriate emissions targets for the land use sector.

Significant emissions reductions can result from regulating the current suburban sprawl land use pattern that is predominant in the state through a high emissions reduction target for the land use sector. CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT.

A higher target means that growth will be directed in ways that cut greenhouse gas emissions by lowering vehicle miles traveled, increasing opportunities for walking and biking, and making transit accessible for more people. As shown by the analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson, the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering.

Setting a higher target for the land use sector will also signal to the world that new land use patterns are a high priority in the fight against global warming. Conversely, a low target will send the signal that business-as-usual development should continue, and that land use reform is a low priority for California.

A higher target must be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

I very strongly encourage you to set a high target for the land use sector in the AB 32 Scoping Plan. Thank you very much for your time and consideration.

Sincerely,  
Sailaja Kurella

## **Form Letter 45 for Comment 320 for AB 32 Scoping Plan (scopingpln08) - 45 Day.**

First Name: Patricia  
Last Name: Hickson  
Email Address: patricia@sierranevadaalliance.org  
Affiliation: Sierra Nevada Alliance

Subject: Land Use Emission Reduction Target  
Comment:

Dear Members of the Board,

We are the Sierra Nevada Alliance an organization that unites hundreds of individuals and conservation groups throughout the Sierra Nevada. We've been working to protect and restore the natural environment of the Sierra Nevada for future generations while promoting healthy and sustainable communities since 1993.

The Alliance remains interested and invested in the land use target for carbon emission reductions, even though this legislation remains largely inapplicable to rural regions, including most of the Sierra. Despite this exclusion we know the emission reduction target set for the State by CARB is likely to have trickle down effects to rural areas. Depending on future decisions tied to carbon sequestration valuation, and future follow-up legislation to SB 375, this target could have especially significant repercussions to the preservation of timberlands, hardwood forests and working landscapes.

Like many individuals, organizations and agencies throughout the State we support the redoubling of this target from 5 MMT to 11 to 14 MMT. We know 11 to 14 MMT is a realistically high target based on the analysis of Dr. Reid Ewing and Dr. Arthur Nelson. Setting a higher target for the land use sector will signal that land use sector is a top priority and that regions should aim high and take decisive action to reduce greenhouse gas emissions from new development.

A higher target must be coupled with a commitment to providing financial resources, technical assistance and other support to help regions, local governments, and transportation agencies achieve the target. A higher target will also signal to the state of California that land use should be a high priority for financial and technical assistance to meet the goals of AB 32. Conversely, a low target will send the signal that business-as-usual development should continue, and that land use is not a high priority for resources and support.

The Sierra Nevada, like most parts of the State of California, continues to suffer environmental damage and diminished quality of life related to poor planning decisions. For example, per capita vehicle miles traveled in the Sierra region are some of the highest in the state due to sprawling development patterns. More than 75% of oak woodland habitat in the Sierra is privately owned, and much of that is at risk for development. A higher emission reduction

target means a better chance for the Sierra to preserve its open space and working landscapes, and to encourage planning patterns that are consistent with the rural quality of life that makes the Sierra such a desirable place to live and visit.

Sincerely,  
Patricia Hickson, Sierra Nevada Alliance, Program Associate

Subject: VOTE NO on new emission burdens for housing  
Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, I understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. I not only question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, but I also know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Governor Schwarzenegger recently signed Senate Bill 375, which sets out the process to determine the actual Regional Transportation-Related GHG Targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board!

As someone who lives in California and is concerned about GHG emissions, I have a vested interest in the success of SB 375 and AB 32. I also have a vested interest in helping the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on new housing will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

TAKE ACTION

Subject: Comments on Climate Change Proposed Scoping Plan

Comment:

I am in full support of the plan's greater emphasis on the role of land use and local government efforts in meeting the greenhouse gas reduction goals. As a public health professional, I would like to see a more formal role for public health in the implementation of AB 32. I would also like to see protections in place for low-income communities to reduce disparities in health burdens. Finally, I would like to see an even higher target for greenhouse gas reductions from the land use sector. The current target of 5 MMT does not keep California on track for achieving our 2050 greenhouse gas reduction goals. CARB should increase the goal for emissions reductions to 11-14 MMT. This would send an important signal to create communities that enable people to get out of their cars and walk, bike, or take public transportation. This would improve their own health while improving the health of the planet.

Subject: AB 32 - The Global Warming Solutions Act  
Comment:

Dear CARB,

Global warming is the key challenge of our time. Meeting this challenge requires fundamental changes in the way we grow our communities. In the AB 32 Scoping Plan, we would like to see CARB increase the land use target from 5 million metric tons (MMT) of CO2 equivalent to 11-14 MMT.

The higher target and the benefits of dense, mixed-use development are achievable with policies California is already considering. Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming. A higher target should be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Thanks for your time and consideration.

Sincerely,

Deanna Knickerbocker

Comment:

Dear CARB,

I am writing to request that, in the AB 32 Scoping Plan, the CARB increase the land use target from 5 million metric tons (MMT) of CO2 equivalent to at least 10 MMT.

I think the higher target and the benefits of dense, mixed-use development are achievable with policies California is already considering and setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming.

Thanks for your time and consideration.

Sincerely,

Samson Tu

Subject: RAISE THE LAND USE TARGET!

Comment:

Global warming is the challenge of our generation. Meeting this challenge requires fundamental changes in the way we grow our communities.

CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT. As shown by the analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson, the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering.

Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming. Conversely, a low target will send the signal that business-as-usual development should continue, and that land use reform is a low priority for California.

A higher target must be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Subject: Please, a higher target for the land use sector  
Comment:

Dear CARB,

We need bold and fundamental changes in land use to meet the urgent challenges of Global Climate Change. I urge CARB to set a substantially higher land use target--14 MMT CO2 equivalent, rather than 5 metric tons (MMT).

Policies that California is already considering would make the higher target achievable. Setting a bolder, more aggressive target would demonstrate to the world that new land use policies are critical in reducing greenhouse gas emissions.

A higher target should be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Thanks for your time and consideration.

Sincerely,

Barbara Fukumoto

Subject: Smart land-use planning  
Comment:

Dear CARB,

Global warming is the key challenge of our time. Meeting this challenge requires fundamental changes in the way we grow our communities. In the AB 32 Scoping Plan, we would like to see CARB increase the land use target from 5 million metric tons (MMT) of CO2 equivalent to 11-14 MMT.

\* The higher target and the benefits of dense, mixed-use development are achievable with policies California is already considering.

\* Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming.

\* A higher target should be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Thanks for your time and consideration.

Sincerely,

Lloyd Eater

Subject: State's climate action plan/ ambitious GHG emission reduction targets for land use

Comment:

In the AB 32 Scoping Plan, we would like to see CARB increase the land use target from 5 million metric tons (MMT) of CO2 equivalent to 11-14 MMT. The higher target the better--the US and all of us on the planet are actually increasing GHG emissions in the last several years, so please act urgently!

If we don't have ambitious goal and a "new green deal" we really have no chance of surviving on this planet. Please don't take this matter lightly, or try to use financial justification for lower targets. In "Green Collar Economy" Van Jones explains so eloquently that these are false dilemmas--green economy (which will only help achieve higher standards) is the only part of the economy that has a chance to grow and create the financial base to support all of our environmentally responsible actions.

Subject: Greenhouse Gas Emission Reduction - Need for aggressive action  
Comment:

I urge the Air Resources Board to approve a strong and forward-looking land use policy that effectively addresses greenhouse gas emissions reduction in order to protect our environment, but to do so with the understanding that the degradation of our environment will ultimately, and in the not too distant future, be extremely detrimental to our overall economy, business capabilities, health and numerous valuable resources.

Land use policy is inextricably tied to greenhouse emissions and smart land use policies will have a significant impact in reducing greenhouse gases and contribute greatly to the environmental impact of greenhouse gas emissions.

It will be important to increase the land use target from 5 million metric tons (MMT) of CO2 equivalent to 11-14 MMT.

Smart planning and leadership is required at this time. Short-sighted planning with limited vision will be bad for the environment, the future of our population, and will quickly be shown to be bad for the economy and business. We need aggressive and significant land use policies to demonstrate that we will reduce emissions, impact the action and thinking in this area, and lead the way nationally.

Sincerely,

Marshall Dinowitz

Comment:

Dear CARB,

Global warming is a key challenge of our time. Meeting this challenge requires fundamental changes in the way our communities are allowed to grow. In the AB 32 Scoping Plan, I would like to see CARB increase the land use emission reduction target from 5 million metric tons (MMT) of CO2 equivalent to 11 MMT or more.

The higher target and the benefits of appropriately dense, mixed-use development are achievable with policies California is already considering. Setting a higher emission reduction target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming. A higher target should be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Thank you for consideration.

Sincerely,

Douglas Daetz  
Sunnyvale, CA 94087

Subject: Increase land use sector target  
Comment:

We cannot continue business as usual in the land use world and address the challenges of global warming in California. A shift to compact development patterns can dramatically reduced vehicle miles traveled and associated GHG emissions.

Please set a higher target for the land use sector, raising the current target to 11-14 MMT of CO2 equivalent.

Small counties will not be able to change their land use habits without assistance from the state. I urge you to include a commitment to technical assistance, funding, and other support to help local governments comply with the new goals.

Subject: Increase the land use target of CO2 to 11-14 MMT  
Comment:

Dear CARB,

The key challenge of our time is Global warming. Meeting this challenge requires fundamental changes in the way we grow our communities. In the AB 32 Scoping Plan, I would like to see CARB increase the land use target to 11-14 metric tons (MMT) of CO2 equivalent from 5 million MMT.

The higher target and the benefits of dense, mixed-use development are achievable with policies California is already considering.

Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming.

A higher target should be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target. Together, we can do it!

Thank you for your time and consideration,  
Lisane Drouin

Comment:

Dear CARB,

As you undoubtedly recognize, global warming is the key challenge of our time. Meeting this challenge requires fundamental changes in the way we grow our communities which determines how we live and our future carbon footprint.

In the AB 32 Scoping Plan, we would like to see CARB increase the land use target from 5 million metric tons (MMT) of CO2 equivalent to 11-14 MMT.

- The higher target and the benefits of dense, mixed-use development are achievable with policies California is already considering.
- Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming.
- A higher target should be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Thanks for your time and consideration.

Sincerely,

Marc Ostrowsli

December 10, 2008

Mary Nichols  
Chair, California Air Resources Board  
Sacramento, CA 95814

RE: AB 32 Scoping Plan

Dear Chairman Nichols:

I appreciate the opportunity to comment on the California Air Resources Board's Proposed Scoping Plan for AB 32 and would urge the Board to substantially increase the the land use and transportation targets to 11-14 MMT. As one who spent most of the last five years as a municipal planner in one of the fastest growing part of the state, the eastern Coachella Valley, I can assure you that failing to increase these targets would send the wrong message to the development community that has preferred to develop walled and/or gated communities.

Thank you both for your long and sustained efforts on this extremely important document.

Sincerely,

David James Petritz

Subject: Strengthen AB32 Scoping Plan  
Comment:

I agree with the recommendations below for the AB32 Scoping Plan and also -strongly- urge you to adopt plans which encourage massive scale permaculture agricultural practices and natural forest watershed restoration, which will store far higher levels of carbon in both secure thick topsoil, and successional forest ecosystems. Such natural carbon recovery is vital to bringing CO2 levels to a safe 300-350ppm level on the planet.

\* Global warming is the challenge of our generation. Meeting this challenge requires fundamental changes in the way we grow our communities

\* CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT.

\* As shown by the analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson, the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering.

\* Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming. Conversely, a low target will send the signal that business-as-usual development should continue, and that land use reform is a low priority for California.

\* A higher target must be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Subject: AB32 Scoping Plan - Land Use  
Comment:

Dear Board Members:

Global warming is the challenge of our generation. Meeting this challenge requires fundamental changes in the way we grow our communities.

CARB should raise the land use target in the AB 32 Scoping Plan from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT.

As shown by the analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson, the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California already is considering.

Setting a higher target for the land use sector will signal to the world that new land use patterns are a high priority in the fight against global warming. Conversely, a low target will send the signal that business-as-usual development should continue, and that land use reform is a low priority for California.

A higher target must be coupled with a commitment to provide financial resources, technical assistance, and other support to help regions, local governments, and transportation agencies achieve the target.

Thank you for consideration of my comments to strengthen CARB's commitment to land use reform, as part of the Scoping Plan for AB 32.

Jeffrey Gilman  
Lafayette, CA

Subject: Land Use Target  
Comment:

As a former land use attorney and current environmental law scholar who studies local governments' role in reducing greenhouse gases, I support redoubling the land use target from 5 MMT to 11-14 MMT. I have been the critical role that local transportation planning can play in addressing climate change as an environmental law fellow at UCLA School of Law; however, I write in my capacity as an individual rather than as a representative of the University or the Law School.

This higher target is critical to signal that this is a top priority. We cannot meet our needed transportation reduction without reducing VMT. California has the opportunity to create a model for the rest of the nation in this area. These emissions reductions will create significant co-benefits for each region by also reducing criteria pollutant emissions, saving money, making budgets more resilient to increased fuel prices, among other things. Recent scientific estimates show that targets must be even lower than initially proposed to avoid catastrophic climate change and significant changes must be made within the next decade. This achievable higher target is essential.

A higher target must be coupled with a commitment to providing financial resources, technical assistance and other support to help regions, local governments, and transportation agencies achieve the target. A higher target will also signal to the state of California that land use should be a high priority for financial and technical assistance to meet the goals of AB 32. Conversely, a low target will send the signal that business-as-usual development should continue, and that land use is not a high priority for resources and support.

Katherine A Trisolini
