

Appendix B Existing and Planned PM_{2.5} Monitoring Network in California

FRM: Federal Reference Method (FRM) PM_{2.5} sequential or single-channel mass sampler.
 CMM: PM_{2.5} continuous mass monitor. Most, if not all, of these are beta-attenuation monitors (BAMs).
 Speciation: 24-hour (filter-based) and 1-Hour (continuous) speciation monitors. All 1-hour speciation monitors are planned. Most of the 24-hour speciation monitors are Spiral Aerosol Speciation Samplers (SASS).
Bold Monitor is designated a National Air Monitoring Station (NAMS) monitor.

¹ The Bay area AQMD has relocated the San Jose-4th Street site to a new site named San Jose-Jackson Street.

² Mammoth Lakes, Quincy, and Portola are all potentially smoke-impacted and we have proposed that one should be designated as a NAMS. Before a decision can be made, the involved agencies will need to coordinate on this, and more data will be needed from the recently opened Mammoth Lakes site

⁵ The South Coast AQMD has relocated the Anaheim-Harbor Blvd site to a new site in the Anaheim area.

⁶ The speciation network in the South Coast AQMD will include two types of filter-based speciation samplers, TEP samplers and SASS samplers. Two sites, Los Angeles-North Main Street and Riverside-Rubidoux, will operate TEP and SASS samplers in parallel. These two sites also have collocated SASS samplers. The Anaheim and Fontana-Arrow Highway sites have TEP samplers only.

⁷ The South Coast AQMD plans to move the PM_{2.5} FRM sampler from the North Long Beach site to a new site in the South Long Beach area, because special particulate studies conducted recently indicate that area better represents the expected maximum concentrations experienced in the greater Long Beach area.
