

# California Air Resources Board Quarterly Auction 3, May 2013

## Summary Results Report

### June 5, 2013 Update

#### Background

The Air Resources Board (ARB) held its third auction of greenhouse gas allowances (GHG) on May 16, 2013. The auction included a Current Auction of 2013 vintage allowances and an Advance Auction of 2016 vintage allowances. The information provided in this report is a balance between the need for program transparency and protection of individual auction participant's market positions.

Prior to the certification of the auction, ARB staff and the Market Monitor carefully evaluated the bids, and determined that the auction process and procedures complied with the requirements of the Cap-and-Trade Regulation. As provided below, the Market Monitor made the following determination:

"The Market Monitor found that the auction was cleared consistent with the auction clearing rules in the regulation and appropriate economic logic. The Market Monitor confirmed the auction results, based on the data available. The Market Monitor confirmed the clearing price and clearing quantities by participant for the auction for 2013 and for the auction for 2016 vintage allowances. The Auction Administrator reported that the 2013 auction clearing price is \$14.00 per allowance, with 14,522,048 total 2013 allowances sold. The Auction Administrator reported that the 2016 auction clearing price is \$10.71 per allowance with 7,515,000 total 2016 allowances sold. The Market Monitor confirmed that the 2013 auction clearing price is \$14.00 per allowance and that the 2016 auction clearing price is \$10.71 per allowance. The Market Monitor confirmed the cleared quantities assigned to individual participants by the Auction Administrator were consistent with the regulation logic involving tie breakers and the random allocation of residual allowances in both auctions and therefore that the total volumes cleared are correct. The auction algorithm correctly applied the regulation requirements covering the bid guarantee and the tie breaker constraints. The Market Monitor did not observe any breaches of security or communication protocols. The Market Monitor recommends that ARB approve the May Auction results"

In the Current Auction of 2013 allowances, there were no violations of the holding limits, purchase limits, or bid guarantee for any Submitted Bids at or above the settlement price. For bids below the settlement price, bids for 12 lots (12,000 allowances) would have been rejected for exceeding the bid guarantee if the auction had settled at the Auction Reserve Price. The bids rejected for violating the bid guarantee were not included in the calculation of the statistics reported for "Qualified Bids." All of the rejected bids were below the settlement price, and consequently had no impact on the determination of the settlement price. No bids were rejected in the Advance Auction of 2016 vintage allowances.

## California Air Resources Board Quarterly Auction 3, May 2013

The Air Resources Board (ARB) held its third auction of greenhouse gas allowances (GHG) on May 16, 2013. The auction included a Current Auction of 2013 vintage allowances and an Advance Auction of 2016 vintage allowances. Below are key data and information on the results of the auction. Please see Explanatory Notes after the list of Qualified Bidders for descriptions of all summary information.

### Qualified Bid Summary Statistics

#### Current Auction of 2013 Vintage Allowances

Total 2013 Allowances Available for Sale:	14,522,048
Total IOU Consigned 2013 Allowances:	10,839,537 (\$151,753,518)
Total POU Consigned 2013 Allowances:	1,032,880 (\$14,460,320)
Total State-Owned 2013 Allowances:	2,649,631 (\$37,094,834)
Total 2013 Allowances Sold at Auction:	14,522,048 (\$203,308,672)

## Explanatory Notes: Qualified Bid Summary Statistics Current Auction of 2013 Vintage Allowances

Total 2013 Allowances Available for Sale:	Total 2013 vintage allowances available for purchase in the auction in metric tons, including allowances consigned by Electric Distribution Utilities and allowances sold by the State of California.
Total IOU 2013 Consigned Allowances:	The 2013 vintage allowances available for purchase in the auction in metric tons that were consigned by investor owned utilities.
Total POU 2013 Consigned Allowances:	The 2013 vintage allowances available for purchase in the auction in metric tons that were consigned by publicly owned utilities.
Total 2013 Allowances Sold at Auction:	Total 2013 vintage allowances purchased in the auction in metric tons.
Total Qualified Bids Divided by Total 2013 Allowances Available for Sale:	Total number of allowances included in all the qualified bids for the current vintage (regardless of bid price) divided by the total number of current vintage allowances available in the auction.
Auction Reserve Price:	The minimum acceptable auction bid price for current vintage allowances in dollars per metric ton.
Settlement Price Per Allowance:	The current vintage allowance price that resulted from the auction, in dollars per metric ton.
Allowances Won by Compliance Entities:	The total number of current vintage allowances purchased in the auction by compliance entities divided by the total number of current vintage allowances sold in the auction. A Compliance Entity is a Covered Entity or Opt-in Covered Entity as defined in the Cap-and-Trade Regulation.
Bid Price Summary Statistics	Statistics are calculated from all the qualified bids for the current vintage (regardless of bid price).
Maximum Price:	Highest qualified bid
Minimum Price:	Lowest qualified bid
Mean Price:	Average qualified bid calculated as the sum of the bid price times the bid quantity of each qualified bid divided

Median Bid Price:

by the sum of the bid quantities  
across all qualified bids.

The price per metric ton calculated so that  
50% of the qualified bids fall above and  
below the median bid price.

Median Allowance Price:

The price per metric ton calculated so that  
50% of the quantity of allowances in the  
qualified bids fall above and below that  
price median value.

## Herfindahl-Hirschman index (HHI):

The HHI is a measure of the concentration  
of allowances purchased by winning  
bidders relative to the total sale of current  
vintage allowances in the auction. The  
percentage of allowances purchased by  
each winning bidder is squared and then  
summed across all winning bidders. The  
HHI can range up to 10,000, representing  
100% of the current vintage allowances  
purchased by a single bidder (i.e.,  
 $100 \times 100 = 10,000$ ).

**Advance Auction of 2016 Vintage Allowances**

The data for the future vintage allowance auction are computed in the same manner as computed for the current vintage allowance auction. No allowances are consigned to the future vintage auction.
