Workshop on Proposed Compliance Offset Protocol for Rice Cultivation Projects and Updates to Existing Protocols

California Air Resources Board

June 20, 2014
Workshop Materials and Comments Submittal

- Presentation and protocol discussion drafts are posted at: http://www.arb.ca.gov/cc/capandtrade/meetings/meetings.htm
- Written comments may be submitted at: http://www.arb.ca.gov/cc/capandtrade/meetings/meetings.htm by midnight, June 30, 2014 (PDT)
- During the workshop, E-mail questions to: auditorium@calepa.ca.gov
Agenda

- Offset Program Status Update
- Verification Training/Accreditation Update
- Proposed Updates to The Existing Protocols—Livestock Projects, Mine Methane Capture Projects, Ozone Depleting Substances (ODS) Destruction Projects and US Forest Projects
- New Proposed Protocol Development—Rice Cultivation Protocol
- Timeline
- CEQA

California Air Resources Board
Staff Proposal for Discussion
Offset Credit Issuance Update

- 4,344,158 ARB offset credits issued to Compliance Offset Projects
- 6,602,801 ARB offset credits issued to Early Action Offset Projects
- Total of 56 Early Action and Compliance Offset Projects credited
Verifier Training Update

- Eight training sessions held since June 2012 with attendance by:
  - 108 verifiers seeking accreditation
  - 31 Offset Project Registry (OPR) staff
  - 8 offset project operators/consultants
- Most recent training held first week of June 2014 included 24 participants in the MMC training
- Future trainings:
  - Possible – December 2014 in Sacramento
  - For more information, see:
    http://www.arb.ca.gov/cc/capandtrade/offsets/verification/verification.htm
Verifier Accreditation Update

- 18 Verification Bodies accredited
- 94 Offset Verifiers accredited
  - 78 Lead verifiers
  - 43 Livestock project specialists
  - 35 US Forest project specialists
  - 34 ODS Destruction project specialists
  - 31 Urban Forest project specialists
- For more information, see:
  http://www.arb.ca.gov/cc/capandtrade/offsets/verification/verification.htm
Questions?
Proposed Updates to the Existing Protocols

- The Livestock, ODS and U.S. Forest protocols are being updated to:
  - Correct errors and typos
  - Reflect the latest data used for quantification
  - Provide clarifications

- Mine Methane Capture protocol
  - Minor clarification on abandoned mine additionality

- Upon the adoption of the proposed updates:
  - Future projects must use the updated protocols.
  - Existing project may use the updated protocols continuing the existing crediting period.
  - Existing projects may continue to use the previous version
Proposed Updates to the ODS Destruction Protocol
Quantitative Corrections and Updates

- Clarify where high boiling residue (HBR), moisture, and ineligible ODS are included and excluded in calculations
- Correct carbon ratios and percent/fraction discrepancy
- Specify the pound/metric ton conversion factor
- Allow for ASTM method (instead of only “Scheutz” method) for analysis of ODS foam blowing agent
- Add a conservative accounting method for ineligible ODS after destruction
Proposed Updates to the ODS Destruction Protocol
Administrative and Regulatory Clarifications

- Convert explanatory text to regulatory format
  - Explanatory text removed
  - Some text shifted between chapters and appendices
- Add/remove some definitions and acronyms
- Clarify eligibility and regulatory compliance requirements
- Clarify descriptions of offset project commencement, reporting period, and crediting period
Questions?
Proposed Updates to the U.S. Forest Protocol

Quantitative Corrections and Updates

- Update conversion factors and clarify formulas and references for greater accuracy and consistency
- Add standing dead tree carbon pool adjustment (Domke et al 2011)
- Update Common Practice (CP) values
- Require summary tables by stratum and percent for each carbon pool (standing live, standing dead, above and below ground) for verification ease
- Consider expanding protocol to Alaska
Proposed Updates to the U.S. Forest Protocol
Administrative and Regulatory Clarifications

- **Section 3.8.1 Sustainable Harvesting:**
  - Clarify that Section 3.8.1 (certification, long term management options 1 & 2) requires the landholder to meet and apply the requirement to all landholdings throughout the US using Options 1, 2, or 3.
  - Clarify that the Uneven-Aged Management (Option 3) requirement applies to the project’s Assessment Area, not to all landholdings, and that the “all landholdings” requirement may be met using Options 1, 2, or 3.

- Clarify steps for harvested wood product (HWP)

- Clarify sequential sampling process
Questions?
Proposed Updates to the Livestock Digester Protocol
Quantitative Corrections and Updates

- Update equations to ensure consistent formatting and fix typos
- Update emission factors and other values
- Update volatile solids (VS) and typical animal mass (TAM) values
- Set maximum value for Van’t Hoff-Arrhenius factor to 0.95
- Clarify baseline data substitution methodology for missing data durations greater than one week
Proposed Updates to the Livestock Digester Protocol
Administrative and Regulatory Clarifications

- Convert explanatory text to regulatory format
  - Explanatory text removed
  - Some text shifted between chapters and appendices
- Clarify project listing date
- Clarify digester-type and cover-type categories
- Update protocol definitions and abbreviations
Proposed Updates to the Livestock Digester Protocol
Implementation Clarifications and Updates

- Modify monitoring requirement for destruction devices
- Update equations to prorate emission reductions for incomplete calendar months
Questions?
New Protocol Development
Rice Cultivation Projects

- Rice cultivation protocol is intended to reduce methane emissions from traditional rice cultivation practices

- Methane (CH$_4$) facts:
  - Relatively large radiative efficiency
  - Second most important anthropogenic greenhouse gas (GHG) in atmosphere
  - Short-lived climate pollutant
  - Controlling methane has co-benefit of reducing global ozone concentrations
  - With new IPCC GWP reductions in methane will have greater benefits
Major Changes from Initial Draft

- Clarify soil moisture sampling requirements
- Clarify reporting period requirements
- Update the 16-run Monte Carlo simulation approach for GHG emissions quantification
- Update structure uncertainty methodology
- Update Monitoring Parameters table
- Clarify documentation requirements
- Clarify verification requirements
- Clarify record requirements for baseline period
Discussions and Clarifications

- How is a fallow year treated in the program?
- What is ARB’s strategy in addressing DNDC model uncertainty for each rice growing region?
How is a fallow year treated in the program?

- Fallow year during baseline period
  - Need to identify whether a fallow year is part of the cultivation cycle
  - Data entered into the DNDC model accordingly

- Fallow year during project crediting period
  - Counted as a reporting period, need to submit an OPDR
  - Fallow year must be entered into the DNDC model accurately and be verified so in the next verification
How is ARB addressing DNDC structure uncertainty?

- Each rice growing region or sub-region has its own uncertainty deduction factor
  - Only variable is number of hectares by region

- ARB publishes hectares in each region annually based on protocol participation
  - Preliminary OPDR submitted within 4 months of end of reporting period
  - Complete OPDR submitted after ARB publishing hectares
  - Verification complete within 8 months of ARB publishing hectares
Managing Project Costs

- The first reporting period may include two cultivation years.
- Small projects (<25,000 MTCO$_2$e) may defer verification to include two rice years.
- Authorized Project Designee (APD) may group together multiple projects for economy of scale when negotiating project cost.
- Alternative method to simplify quantification of primary emission reductions (reduce computer run time from 13-14 hours/field to 1 hour/field).
- ARB contract for developing tool to simplify reporting and use of DNDC model.
ARB Contract
Quantification Tool

- Contract being reviewed by DGS
- Easy compliance with record keeping and quantification requirements
- Simplify data input
- Project quantification calculator
- Project record keeping file
Verification

- First proposed compliance offset protocol to rely entirely on modeled calculations not tied to direct measurement
- More specifications are added to current proposal
- Verification focuses on confirmation of project activity
  - Staff continues to seek input from verifiers on process
Protocol Timeline

- Discussion draft protocols for public comment: March and June 2014
- Informal comment period: June 20-29, 2014
- Release 45-Day Comment protocols: July 29, 2014
- 45-Day Comment period opens: August 1, 2014
- Board consideration: September 2014
- If approved, expected effective date: Jan 1, 2015
Environmental Analysis

- ARB prepares an Environmental Analysis (EA) for proposed actions which may result in significant impacts on the environment.
  - Prepared according to requirements of ARB’s certified program under the California Environmental Quality Act (CEQA)
- The EA will be an Appendix to the Staff Report
- A CEQA checklist is used to identify and evaluate potential impacts to the environment.
Environmental Analysis

- The EA will include:
  - Beneficial Impacts
  - Foreseeable Methods of Compliance
  - Potential for Adverse Impacts
  - Feasible Mitigation Measures or Alternatives

- We welcome your input on the appropriate scope and content of the EA as it’s developed.
  - Foreseeable Methods of Compliance
  - Potential for Adverse Impacts
  - Feasible Mitigation Measures and Alternatives

- Formal comment period for the EA begins when the Staff Report is released with the 45-day proposed regulatory action notice
Program Contacts

- Yachun Chow, Rice protocol staff lead
  ychow@arb.ca.gov

- Greg Mayeur, Manager, Climate Change Program Operations Section, gmayeur@arb.ca.gov

- Rajinder Sahota, Chief, Climate Change Program Evaluation Branch, rsahota@arb.ca.gov
