Steve,

In reviewing the ETAAC Draft Report, the language in the Cleantech Workforce Training Program (part of the Financial Sectors additional organizational and policy recommendations) should be more inclusive and refer to "apprenticeship training programs" rather than just union programs; as seen on page 2-18, the report states, "...and the related Union Apprenticeship training programs within the Building Trades." Expanding this language to include all apprenticeship programs will allow for the inclusion of those programs provided through union and management apprenticeship. This will ensure all workers have the opportunity to develop new skills to successfully deploy advanced clean technologies in California.

Thank you for considering our comments.
