Subject: Re: MTC Baseline Data

Hello Dmitri, the following table reflects our most up to date Baseline-2035 RTP Project scenario numbers:

	2005	2020	2035
Baseline - 2035 RTP Project Scenario Population	7,094,823	8,018,000	9,073,700
Baseline - 2035 RTP Project Scenario VMT/capita	20.6	20.3	20.4
Baseline - 2035 RTP Project Scenario CO2/capita	20.8	20.1	20.5

Also note that the population numbers shown in the table above are the same regional population numbers used to calculate the VMT and CO2 per capita.

If you have any questions, let me know and I'll talk to you soon.

Harold

Harold,

Thank you for setting time aside to talk with us earlier. The following table includes data that has been formally submitted to ARB. The source for the population and CO2 per capita is "Attachment C of the Preliminary Report on Target Setting from MTC, SACOG, SANDAG and SCAG - 5/19/10" while VMT per capita came from MTC's response to ARB Questions on 6/8/10.

2005

2020

2035

Population

7,094,823

8,018,008

9,073,700

Baseline VMT/ capita

20.7

20.6

20.5

Baseline CO2/capita

20.8

19.7

20.1

According to the presentation from the 7/9/10 Planning Committee Meeting, the CO2 per capita is 20.8 (2005); 20.1 (2020); 20.5 (2035)

I just want to make sure that our information is accurate and reflects the latest approved data. I feel more comfortable asking you as opposed to making incorrect assumptions. Can you please confirm the numbers for the VMT and population we have shown in the table above and indicate the correct numbers for CO2, either the table, presentation, or another revised number? Feel free to the make any corrections or updates using the table as a template.

Please let me know if you have any questions or need any clarification.

As always, thank you for your help,

Dmitri
