# **Suggested Rebate system**

**Minimizes primary energy consumption**

**1. Looks at a home's total primary energy (electricity plus gas). One unit of electricity is equal to 1.1 units of gas energy.**

**2. Compares energy consumed to a baseline.**

**3. System is based on performance.**

**4. Performance can be achieved by adjusting thermostat settings, all up to the homeowner.**

**5. Innovative energy saving measures are encouraged.**
