Subject: Greenhouse gas emission reduction proposal

Dear Air Resources Board Members,

Attached is a new concept titled "*CO₂ Capturing Plant for Greenhouse Gas Reduction*" submitted as a public input idea for the reduced greenhouse gas emission solicitation. The new concept described in the attached proposal is aiming at the extraction of post combustion CO₂ from sources such as industrial or transportation, directly from the atmosphere at the sequestration site. Co-locating the two eliminates the cost of transportation and storage of CO₂.

Hope you will find this new concept interesting and will be happy to answer any related question.

Sincerely,

Michal Wolkin
