<b>SUMMARY</b>	<b>Total</b>	<b>Minimum</b>	<b>Maximum</b>	<b>Average</b>
	425	0.8	76.2	11.1

\* An hourly average concentration of PAHs is measured continuously. A 24-hour average is obtained for each day, from which the minimum, maximum, and mean are obtained by month. Only days where a minimum of 18 valid hours of data were present are included in the calculations. The limit of detection (LOD) of the hourly PAH data is 0.3 ng/m3.
