

Draft Initial Regulatory Strategies Work Group Schedule

California Air Resources Board (CARB) staff is proposing to evaluate consumer product survey categories with more than 0.5 tons per day (tpd) volatile organic compound (VOC) emissions as part of its rule development process. Two exceptions are “pipe cement and primer” and “multipurpose lubricants”, which were both recently regulated by the South Coast Air Quality Management District and CARB.

Staff is proposing a new Regulatory Strategies Public Work Group meet regularly to review each of the remaining 47 consumer product survey categories with at least 0.5 tpd VOC emissions to prioritize opportunities for achieving additional emission reductions and air quality benefits. These work group meetings will typically be held by teleconference. CARB also encourages interested stakeholders to meet individually with staff to discuss category-specific issues, emission reduction opportunities, and possible innovative regulatory approaches. CARB intends to utilize these meetings to propose specific categories and possible regulatory options for discussion at a second public workshop in Fall 2019.

CARB staff would like stakeholder feedback regarding the following possible schedule for initial Regulatory Strategies Public Work Group meetings (to be held by teleconference). Additional work group meetings for promising categories will be held in Summer 2019 as needed. Please contact Lucy Negrete at lucy.negrete@arb.ca.gov if you would like to participate in the Regulatory Strategy Public Work Group or be alerted to upcoming work group meetings. Please provide any feedback regarding the following draft schedule to Joe Calavita at joe.calavita@arb.ca.gov or (916) 445-4586 by Monday, April 15, 2019.

Draft Schedule for Initial Regulatory Strategies Work Group Meetings

May 21, 2019

10 am – noon

Pacific Daylight Time (PDT)

Topics:

- Hair Finishing Spray
- No Rinse Shampoo
