

## **Diesel Emission Control Systems Verified for Use with Biodiesel**

\*These diesel emission control systems (DECS) are verified for use with biodiesel blends subject to the following conditions:

- The biodiesel portion of the blend shall be 20 percent or less of the fuel;
- The biodiesel portion of the blend complies with the American Society for Testing and Materials (ASTM) specification D6751 applicable for 15 parts per million sulfur content;
- The diesel fuel portion of the blend complies with Title 13, California Code of Regulations, sections 2281 and 2282;
- The use of biodiesel applies to devices verified to reduce only diesel particulate matter; and
- Other alternative diesel fuels such as, but not limited to, ethanol diesel blends and water emulsified diesel fuel are excluded.

The manufacturers of the verified DECS have indicated that their systems are compatible with biodiesel per the above specifications. The Executive Orders for DECS will be updated to reflect compatibility with biodiesel. Use of biodiesel blends that meet these specifications does not void the DECS warranty.
