Subject: VMT targets: make them stronger!

Comment:

Please note that we need to dramatically reduce our CO2 levels in CA. Thus, I am writing you to reduce them much more than the amounts allowed in the proposed legislation. Now is the time we can make a huge difference and it will save us our population's health and our state's (tax) money if we look down a clearer road!
Thank you

Subject: We need stricter targets for lowering GHG emissions

Comment:

GHG emissions should not be a political compromise. We need the strictest targets that can feasibly be accomplished. Please tighten the limits in your SB 375 implementation.

Subject: Adoption of Proposed Regional Greenhouse Gas Emission Reduction Targets for Automobiles a

Comment:

Dear Board Members

I would like like voice my support for efforts to reduce greenhouse gas emissions for automobiles and light trucks re: SB375 and AB 32.

I am a resident homeowner in West Oakland. The danger of emissions to myself and my family's health is well documented. SB 375 will help to create a better environment for my family, our neighborhoods and community -- and help to rebuild our community by increasing awareness and incentives to live near public transportation (e.g. West Oakland BART station), drive less, walk more and enjoy cleaner air quality.

The failure of government regulators to reduce greenhouse emissions places the burden of business and consumer overconsumption squarely on those of us who have to breathe in their polluted air. The port, the freeways and the use of our neighborhood as a throughfare for cars and trucks makes our neighborhood air quality one of the unhealthiest around.

Please consider the highest targets possible and help this region look forward with optimism to a better economic future, based on lower emmissions, greener technologies and better urban planning.

Sincerely,
Jennifer Dhillon

Subject: SB 375 Target
Comment:

Please reduce VMT per capita in the SCAG region so that we don't get more congested as our population grows. This means decreases in VMT per capita of about 20% by 2020 and 40% by 2035.

Thank you,

Kathy Seal

Subject: 2010sb375

Comment:

I am grateful that the State has passed SB 375, which improves everyone's quality of life through improved transportation planning that reduces air pollution and greenhouse gas emissions.

MPOs are proposing to reduced air pollution and greenhouse gas emissions through reducing vehicle miles traveled VMT per person. VMT reductions can produced many benefits:

- Reduce traffic congestion
- Reduce consumption of gasoline
- Reduce our dependence on foreign oil.
- Encourage improve access to transit through better land development that will be more walkable and bikable
- Such developments also provides job opportunities, shopping and other amenities closer to residences
- Plus reduce air pollution and greenhouse gas emissions providing a more healthful environment and reduce the impending environmental disasters

However, the VMT reductions per capita that the MPOs and CARB have proposed are limited to accomplish all these benefits, because of projected population increases. In other words, the net result from even the maximum proposed 10% VMT reduction per capita still means an 8% increase in VMT by 2020, considering the population increase and a 5% VMT target would mean a 14% increase. By 2035, a 12% VMT reduction per capita would mean the total VMT would 28% higher than in 2005 (using the official California Dept of Finance population projections).

To accomplish the needed reductions requires stopping sprawl and shifting to in-fill development along with ending highway expansion. Transportation planning must include aggressive coordinated land planning and transportation demand management that supports increased transit use, car-pooling, bicycling and walking, unbundling parking costs, pricing of roadway use and parking pricing

As a past SF BART Director and Member of TRB's Committee on Transit Development and Land Use, our current pricing system on BART transit parking is fundamentally unfair especially because its improvement cost and the increased land value occupied by parking is equivalent to \$6-7 per space, yet the charge if any is applied is a fraction of this cost, so non-parkers who are less affluent and more transit dependent subsidies the more affluent suburbanite use of BART parking. In turn peak hour feeder transit subsidized at the same cost as the parking subsidy is seldom used and where BART

could in lieu develop Transit Oriented Development on the acres of space occupied by parking or costly structured parking.

Being revenue neutral and driving less will reduce VMT. I believe that the combination of land use change and ending highway expansion will put California on track to achieve a 2035 target of no net total increase in VMT.

I know that the MPO draft targets are challenging because they represent a reversal of the historic trend in constantly relieving congestion and increasing VMT per capita. But the bottom line is these measures will expand local jobs opportunities and improve the quality of life in all our communities as well as impending environmental disasters.

First Name: Jim
Last Name: Stewart
Email Address: Jim@earthdayla.org
Affiliation: Sierra Club

Subject: Reduce VMT/capita to counter increases in population: 40% less by 2035
Comment:

Please reduce VMT per capita so that we don't get more congested as our population grows. This means targets should be decreases in VMT per capita of about 19% by 2020 and 40% by 2035.

The result will be increased quality of life, less air pollution and less global warming contributions.

More details attached.

First Name: Dave
Last Name: Campbell
Email Address: dave.campbell@ebbc.org
Affiliation: East Bay Bicycle Coalition

Subject: GHG Reduction Targets
Comment:

The East Bay Bicycle Coalition strongly encourages the Air Resources Board to adopt the highest targets for reducing greenhouse gas, and does so in a way the reasonably brings the State of California into attainment of the year 2020 goals of reducing GHG's to the levels of 1990. We also strongly encourage you to adopt absolute GHG target reductions and not "per capita" reductions. Per capita reductions are not actually reductions, as MTC Executive Director Steve Heminger explained at the July 28, 2010 MTC Commission Meeting that per capita is not a reduction at all. AB 32 and SB 375 call for absolute reductions. Please revise your methodology to reflect real reductions in GHG's from the transportation sector.

Thank you very much for your consideration of these comments.

Aug 10, 2010

Chairman Nichols
1001 I Street
Sacramento, CA 95812

Dear Chairman Nichols,

I encourage the California Air Resources Board to pursue vigorous implementation of SB 375 (Steinberg). This law will help California lead the way in the implementation of "smart growth" economic development policies that promote healthier communities and reduce harmful air pollutants and greenhouse gases. SB 375 does this by encouraging improved land use and transportation planning and alternatives to driving, including:

- *neighborhood reinvestment and redevelopment
- *more robust and effective transit programs
- *more walkable, compact communities connected by transit
- *community design and infrastructure that supports walking and biking

We know these programs will lead to a smart economic development policy at the same time that they generate excellent health benefits and address global warming with more jobs, cleaner air, and less time in traffic. These should be priority goals in California.

Sincerely,

Mrs. Beth Krom

Subject: CARB staff recommendations on SB 375 emission reduction targets
Comment:

We sent you earlier comments on these draft emission reduction target and the methodology used to develop them. We continue to believe that adopting per capita based emission reduction goals is a recipe for increasing each region's overall air pollution and emission levels, since projected growth in population will more than offset any reductions achieved on a per capita basis. If CARB still insists on adopting per capita goals in order to facilitate comparisons between regions, we strongly urge you to also adopt absolute net GHG reduction goals for each region. It will do us no good if each person is reducing their GHG emissions, if the size of the population in each region is growing at a pace that creates a net increase in GHG emissions each year. Each region should also have overall net GHG reduction goals that take into account population growth to ensure that we are actually meeting the mandates of SB 375. CARB should not undercut the goals of AB 32 and SB375 by only setting per capita goals for each region. That would leave CARB open to lawsuits for failing to implement the laws as written.

Don Wood, Sr. Policy Advisor

Chairperson Mary Nichols
P.O. Box 2815
Sacramento, CA 95812

Dear Chairperson Nichols,

I urge the California Air Resources Board to pursue strong, vigorous implementation of the Sustainable Communities and Climate Protection Act (SB 375). This law will help improve local economies, reduce our infrastructure costs and create jobs while also reducing air and global warming pollution.

The board can demonstrate strong leadership and ensure the law reaches its full potential in two ways:

1. Establish ambitious regional global warming pollution reduction targets.
2. Exercise your full powers to identify and support financial resources that cities and towns can use for planning and other activities that meet the goals of SB 375.

I urge the board to adopt ambitious targets for California to meet the goals of the legislation, including reducing traffic and chronic illness; making our communities healthier and more competitive; and confirming California leadership on issues of growth, sustainability, public health and overall livability.

Please exercise your full power to secure funding for implementation of this landmark law.

Sincerely,

Ms. Kellie Cutrer
1314 2nd St

Subject: New transportation priorities needed
Comment:

Dear ARB Members,

Our coastal region is going to be seriously affected by sea level rise. For this reason, I urge you to require more ambitious greenhouse gas emissions goals than the ones recommended in the staff report.

Our local jurisdictions could do much more to concentrate housing near job centers, and to prioritize non-auto travel. It is a sad reality that Santa Cruz County's Regional Transportation Commission's top priority is widening Highway 1. Please send them a strong signal that widening highways is not the way to greenhouse gas reduction.

Thanks,
Richard

Subject: SB 375 Greenhouse Gas Emission Reduction Targets
Comment:

Dear CARB:

I am writing as a resident of Santa Cruz County to urge that you adopt GG Reduction targets for the AMBAG region that represent a REAL reduction, not a token reduction of 0% by 2020 and minus 5% by 2035. The AMBAG region should be a leader in the State of California, not the one region without a real reduction target. We have a populace that is deeply concerned about climate change, and supportive of making a real difference in moving in the right direction, not standing still or moving backward. We want to see SB375 become an effective mechanism for reducing GG emissions and curbing climate change, not just a paperwork exercise that doesn't work!

Thank you for considering these comments.

Celia Scott

Subject: GHG Reduction Targets for AMBAG Region
Comment:

Dear ARB Board:

Please give some attention to the proposed GHG Reduction Targets for the AMBAG region. This needs your attention in part, because the target drafting process appears to have suffered from, at least, a lack of focus on this "smaller" region of 3/4 million people, if not an outright breakdown of the drafting process.

After the ARB's August 9 staff report came out with proposed targets of +13% (increase!) by 2020 and +14% by 2035, AMBAG staff and other public officials told me they were surprised, or shocked, by these non-reduction targets. ARB staff told me they issued targets based on AMBAG's previous 2008 business-as-usual (no action on GHG) forecast, on the rather slight explanation that AMBAG did not submit a specifically endorsed single set of proposed targets to ARB. Apparently, the hard working ARB staff ran out of capacity before it came to working further with the less prominent AMBAG region, to devise better.

Then, once the proposed "do-nothing" targets were out, some local officials, including on the AMBAG Board, were understandably confused, imagining incorrectly that the targets were based on a healthy collaborative and scientific process and little better could be advised.

In an attempt to address the unacceptable situation, at AMBAG's special meeting regarding GHG Reduction Targets on August 23, 2010, at which I was present, the AMBAG Board voted 16 yes to 6 no, to endorse targets of 0% by 2020 and -5% reduction by 2035. AMBAG staff's presentation at the meeting, also advised the Board that more ambitious targets of -5% by 2020 and -10% by 2035, are a supportable option the AMBAG Board could also consider.

Besides AMBAG staff's anticipation of further modeling results in the near future to support yet much better targets, it is also quite safe to say that there is nothing uniquely disadvantaged with the circumstances of our three-county region, that we can't plan to do as much or better than other MPO regions.

AMBAG staff's memo to the AMBAG Board correctly observes that "there is substantial public expectation that this region will seek to be a leader in GHG reductions from the transportation sector."

If there is some doubt here, I suggest you use the instruction and clear intent of state law, AB 32 and SB 375, as your guide. Your

job in this instance as public servants, I believe, is to help humanity avoid future climate catastrophe. The climate scientists are telling us we must act now, not later. The ultimate economic penalties will be incurred, if we do not.

I urge you to adopt targets of -5% and -10% for the AMBAG region, which AMBAG staff presented as an option, and which will spur a little healthy innovation to achieve. Or, at the very least, to adopt the 0% and -5% targets which a large majority of the AMBAG Board endorsed on August 23.

Thank you.

Subject: GHG Reduction Targets
Comment:

Please adopt strict reduction targets for GHG emissions. Approximately 25% of all trips are less than one mile and could be achieved by means other than driving for most people. CARB must lead the way and help people shake the driving habit.

Targets of 0 reduction or any target under 10-15% by 2020 are not enough to make a significant dent in climate crisis.

Adopt AMBAG targets of -10% for 2020 and -20% for 2035 to make a difference. We need your leadership on this issue.

Thank you.

Dear Chair Nichols and Air Resources Board Members,

Thank you for all your hard work in the implementation of SB 375. I believe that by the appropriate enforcement of this law, we will see a reduction in greenhouse gas (GHG) emissions and more sustainable communities and transportation choices.

As a person who values walkable and bikeable communities, accessible alternative transportation, and clean air, I urge you to adopt only GHG emission reduction targets that are ambitious and achievable.

In your upcoming meeting, please vote for ambitious GHG emission reduction targets, and achievable sustainable community plans.

Thank you for all your hard work and for the opportunity to submit my comments.

Very truly yours,

Carmen J. Fuentes

Comment:

It is clear that we are running out of easily accessible oil and its price will only go up. We need to act now to encourage the reduction of greenhouse gases and at the same time create incentives for the development and implementation of green jobs. This is a future that is coming, the question is whether we will take the steps necessary to make the transition a smooth one or whether we will wait and create major problems for US.

Comment:

Dear Nichols, Air Resources Board and Chair,

Thanks for the good work on SB375.

I am asking you for an big plan to reduce GHGs significantly.

It will take courage because lots of people make money the way things are and will be terrified of changes, and they will fight you.

Painting roofs with white paint that has ceramic beads mixed in reflect sun light and can reduce GHGs significantly, especially if this is done to lots of roofs.

Please work with other policy makers to set up financing so that people can paint their roofs white, with low interest loans. Think about letting people use their property tax for this, in order to pay off the costs in ten or twenty years.

Comment:

The most important crisis facing our society is global warming. Climate change is already creating devastating problems in our country and across the globe. It will only get worse, if we do nothing. It makes sense for us to reduce the source of pollutants that contribute to this process. Setting a target for emissions is the least we can do, and this will also have the effect of improving our air. We should also do this as a model for other communities whose leaders are under the impression that scientific evidence is not important.

Subject: GHGs
Comment:

To the California Air Resources Board:

It is imperative that California continue to show its traditional leadership in curbing Greenhouse Gases. California's leadership since the 70s has been an inspiration to wind and solar advocates in dozens of countries around the world. Our strong stand has helped create the Danish wind energy industry, and moved Japan from a late-comer in implementing PV to the world's leading solar nation in the early 2000s.

It is hard to overestimate what a force California has been in the fight to save the climate for future generations.

I know, because I was personally involved in these California and overseas initiatives since the late 70s.

Please move forward in curbing GHGs with as strong a commitment as possible, so the world will have examples to follow. There is no more time left -- and this fact is now well known by those who have deeply studied the issue.

Sincerely, Tyrone Cashman, Ph.D.

Subject: More Public Transit, Less Cars

Comment:

It's obvious that people are having an impact on the nature of the earth. Whether or not one believes in global warming, we are taking so much from the earth and giving only trash back and this creates an imbalance. We must make immediate changes to bring the balance back and leave less damage. I want the option to use public transit easily and affordably so I no longer need a car. This should be a goal to work towards. It is possible to make cars more fuel efficient, to go above and beyond any current fuel standards. It is possible to even run a car off food grease or hydrogen... why not do it? Capital is short sighted. The earth doesn't accept cash, check, or credit. We are ruining the world that is so ever giving.

Subject: ADOPTION OF PROPOSED REGIONAL GREENHOUSE GAS EMISSION REDUCTION

Comment:

Dear Board Members:

Thank you for giving me the opportunity to respond to this important subject. I live in Redondo Beach, Ca. and have watched & read how the use of trucks in the harbor area of Long Beach has been held under close scrutiny regarding emissions. I want to see this continued and other green house ideas used in all our urban areas for the benefit of city dwellers. In Redondo we have natural gas vehicles cleaning our streets and Torrance has low emission busses...a step in the right direction.

I inquired into putting solar panels on my home. It is not possible for me as a retired home owner to afford this and I am very disappointed that this is not more feasible. If all our commercial building that are in the city and at least 1/2 of the homes, it would make a big difference in cost to run our businesses and it would take the pressure off the delivery system during peak hours. This would take the pressure off the power plants to supply electricity by burning gas. Batteries now are becoming more efficient to maintain the electricity for the evening hours. Many small businesses are closed down in the evening using only at night.

I was very disappointed in the problem that one of our L.A. Colleges had a problem when they initiated a method of saving millions of dollars of electrical cost only to have their hands tied by P G and E their power supplier because they had a contract to buy their power only from PB&E. I don't know how that turned out, but these are the things that keep us from moving ahead. A private company installed the solar and was going to sell the electricity supplied by the solar panels and in 6 years it would belong to them. I saw this done in Fresno, Ca. and it was the parking lot for one of their community buildings. All our parking lots should be like this. What a difference it would make. Let's make it happen.

Subject: Air Pollution
Comment:

Air pollution is a major environment-related threat to children and a risk factor for both acute and chronic respiratory disease in adults. In 2006, ozone levels in the San Joaquin Valley exceeded the federal eight-hour ozone standard on 86 days and the state one hour standard on 90 days. California has 8 of the 10 most polluted counties in the nation and of these eight counties, four are in the San Joaquin Valley where I live. Steps must be taken now to reduce the proportion of persons exposed to air that does not meet the US Environmental Protection Agency's health based standards for ozone to 0%.

Subject: We must reduce greenhouse gas emission

Comment:

It's paramount that we begin to set the stage to transition into more sustainable life styles as our planet alerts us to the changes that occurring due to your consumption of fossil fuels. We can make this transition more accessible to the general population by making public transportation, biking, community gardening more widely available. People wish to make this change, but feel it is impossible given the access to these forms of transportation we currently have. Please consider these issues and help our community move forward for the sake of future generations.

Comment:

I agree that emissions must be reduced and that another bill should be introduced to reduce particulate emissions such as diesel. Too many individuals suffer allergic reactions to these particulates. As for this current bill, please allow it to pass in order that other states may follow suit and send a message to the rest of the developing and industrial world.

Subject: GHG Emission Reductions
Comment:

Please enforce these reductions, As a young mother (36) bringing up two sons in the Los Angeles County I am so aware of the increase in pollution but also the ability to reduce if we all pay attention to what can be done.

I gave up driving a car 8 years ago for a couple of reasons, one of them because I didnt want to contribute to pollution from exhaust fumes or use gasoline to run it.

It is not always easy to find ways around living in a city and society that assumes car ownership but it can be done and people are getting more and more into the idea!

Our air is so much less toxic without gasoline exhaust fumes and I dont want to imagine how much oil has come out of the earth to run cars!

Please please keep up the movement clean air.

My kids are willing to ride their bikes in town, and they do how much exhaust do they have to inhale while they are doing so? At the moment , although we have bike paths here I worry about the amount of gas they have to inhale.

This is the future generation.... A generation of -hopefully- enviromentally caring, HEALTHY, smart , people.

Please can we set them a good example...

As parents in our schools we are helping to organise bike routes, all kinds of things that are condusive to helping kids and families get used to not using cars

I know our community here in Santa Monica will be grateful for anything you achieve.

We are already really grateful for all you have done.

Thankyou so much and please keep doing all you can.

Holly Wright

Comment:

We should have started reducing emissions years ago, but it's not too late. I value clean air and if the reduction is handled correctly it won't be any harder on the auto and truck makers than it will be on all of us to continue spewing crap into the air. It is destroying the living world and our lungs.

Subject: Comment on 2010sb375

Comment:

On September 23, the California Air Resources Board (CARB) will vote to either adopt or reject greenhouse gas (GHG) emission reduction targets submitted by each region as part of SB 375.

I urge the Board to adopt aggressive yet achievable GHG emission reduction targets. Targets must reflect and be predicated upon changes in 1) current land use and transportation policies, 2) government funding programs, and 3) practices; these changes must be aimed at reducing reliance on travel by motor vehicles and encouraging development of more efficient land forms and transportation systems.

Reduction targets must be set based upon sound fiscal policies to ensure that California maintains a competitive position in world markets and that the quality of life people seek is provided now and in the future.

The Board needs to require and enforce the implementation of state and local policies and actions that ensures public funds are invested in integrated land development/transportation improvements that provide maximum return per dollar invested, taking into consideration the value of clean air and other environmental betterments.

The Board needs to require the preparation of Economic/Environmental Impact Reports for state and local policies, funding programs and projects that have a potential for imposing significant negative impact on air quality.

Unless the Board adopts aggressive emission reduction targets, future generations will be burdened by a lower quality of life and higher costs for mobility, health care and other critical life functions.

Subject: GHG emission reduction targets
Comment:

In these times of economic uncertainty it is easy to lose sight of the larger picture of our environment and the biosphere. Like it or not our economy is completely dependant upon the health of the environment. Just ask coastal Louisiana residents.

Carbon levels as they are now are resulting in ocean acidification and ice cap melting. Ice cap melting also means a reduction of salt in the oceans and that will result in a change of ocean currents and thereby change the atmospheric currents. It is impossible to say exactly what will result however if the jetstream moves our farming system will most likely reel from the shock and the rest of the economy will come tumbling down along with it. Our current economic state will look like a dream.

Terrorism will rise as more and more people become desperate for basic necessities and blame the western world for ruining the free lunch our biosphere has provided since before history.

If we half-ass these carbon cutting initiatives, we are all screwed. Help green entrepreneurs become profitable and lets start a green job revolution that can not only save our planet, but also help our economy.

Thank you for your time.

Sincerely,

Derick Dressel

Comment:

To all the Board Members and those concerned,
The time has come to make choices that affect the planet for generations. Those in positions of power lead us into a future that is sustainable, or not. It is up to YOU to be smart, introspective and future-orientated. Whoever you are, or wish to become, KNOW this : You can be part of a legacy that reaches for a higher good or part of a status quo. If we LOOK ahead and make wise choices our communities will thrive. Emissions, factories, toxins, communities that are designed to lengthen commutes and not strengthen our lives will be the dilemma of our children. Let us put our insight, wisdom and independence to work for a common good. Thank You All and Peace be Upon You, redLisa Wiley

Comment:

While you would hardly consider me an environmentalist I am very very concerned. When I first moved into the San Juaquin valley in the 60's we could see the mountains in the distance most everday. This valley has the worse air quality of any place on the planet. I have a constant cough and wheeze. Most children in this area suffer from some sort of breathing difficulty. While I realize politics is all about winning don't you all think it's about time to make some decisions with your grandchildren's future in consideration. You will be long gone and your greatgrandchildren will be buying air out of cansisters to breathe...If they are poor they will just suffer. time to do the right thing, not the politically expediant thing...with only your greed and career in mind. Thank you Debra Williams concerned mother and special ed. teacher

Subject: Finding Hope in Advocating Communal Health

Comment:

It is important to citizens of all backgrounds and places in society to receive the greatest benefits that come with renewed proposals for helping preserve the sanctity and health for the masses, which will be greatly helped along by this carefully envisioned adaptation for clean air, and the furthering of human health in the steps that this will help initiate towards advancing and restoring our nation's heritage of clean and pure environmental foundations, such as the universal need for clean air. By enforcing this bill, Congress alleviates a grating burden on the public, by ensuring our public has tomorrow to live for. Our world, as well as the immediacy of this nation deserves the justice brought by carefully and patiently regulating the industrial waste of our dear america, noble in it's ideals of providing a medium for democratic transformations of such domains as transportation.

In addition to the opportunity this bill provides for safe-guarding the health of all of us who breathe, it provides another step in the evolution of learning to heal our world, in a legal and binding way, by furthering this public's incentive to embrace public transportation, and this call to intermingling for our daily needs in transportation is an excellent way to build and strengthen the ties of community, in city and state planning, as well as in individuals aspirations for greater wellness, and a new approach to reaching and arriving at the many venues and experiences we drive to, and leave from. It is the responsible thing to do, and it is not only beneficial to the greater global body of human beings, and life as a whole, but is a progression towards societal conscientiousness, and self-awareness, ripening to forward to our transportation industries to grapple with, and master the technological prestige of more renewable vehicle productions, while opening new ways to readjust our economy so as to be more self-sustaining. As simple and uncomfortable a new regulation may seem to some, it is a path to better days in the wake of widespread transportation ills. Please vote to pass this bill.

Comment:

It's pretty obvious that the climate effects all of us. It is not so obvious, how the US, a supposedly well educated nation, has as a whole, decided to do next to nothing to deal with the issue of global warming. As if ignoring it, or denying it is going to make it go away.

Without accurate information and understanding of the physics of global warming, we are destined to the same fate as many of the species we have "committed to extinction." We aren't going to be able to adapt to an average temperature that is 10 degrees higher.

Stickng with the status quo because we can't see any other possibility, is like the smoker who thinks he has to have a cigarette.

Comment:

Dear Chairwoman Nichols and Board Members;

Climate change is a megatrend. Climate change is a fact of modern life. We cannot put our heads in the sand and ignore the impacts of global warming on our state. The best way to prepare for the future, is to address the root cause now. We simply must reduce our carbon footprints. We must reduce the amount of fossil fuel we use. We must revise the inefficient land use patterns so popular in past eras. We must drive less.

Only strong and firm ghg targets, such as those in your staff recommendation, will break the cycle of fossil fuel dependency. Please support and approve the recommendations included in the written staff report - for all regions of the state. Please do not postpone or reduce the proposed targets.

Sincerely,
Grieg Asher

Comment:

As a child who grew up in California and developed asthma, I know firsthand what poor air quality does to developing lungs. As an adult who live in California currently, I do not want my children to have a chronic lung condition. I could argue with science and call it bad "science." But I am not a scientist nor do I pretend to be one. But to logically contemplate that people who have dedicated their entire lives collectively to the scientific method is not reasonable and approaches a vast conspiracy that seems unfathomable. Thank for taking the time to accept the comments and your consideration.

Subject: senate bill 375

Comment:

It is of the utmost importance to do whatever we can to reduce our dependancy on burning fossil fuels to move citizens where they need to go and create the energy they need to live full and productive lives. California and the USA in general have been much too dependant on personal vehicles to get from place to place. We need strict limits on vechicle emmissions and increased gas milage for our transportation. It is obvious that auto manufacturerers are not going to do this voluntarily. When countries make a committment to alternative transportation as they do all over Europe then emmissions and energy demand goes down. I visited my parents twice when they were living in the Netherlands and I was very impressed with the bicycle lanes and train/trolley systems. It is cheap fast and easier to ride your bicycle or take a train than it is to take out your car. Until this happens we will remain too dependant on cars and trucks to transport us from plae to place. SB375 is a small step in the right direction. Recently the city of Santa Clara opened a bike path that runs from very close to my house to very close to my work. I can now ride safely at night without having to worry about being run over by inattentive drivers on cell phones and PDAs. I now ride my bicycle to work at least 3 days a week sometimes more. Previously I could only ride 1-2 days a week due to later work hours which required I ride in the dark when I would be much more at risk of being run over. When riding a bicycle becomes safer and mass transportation becomes easy to use people will change their habits and save the environment and help end our dependancy on foreign oil. Please support this important step in a positive direction.

Thank you,
Scott Brunson

Comment:

Dear California Environmental Protection Agency Air Resources Board

I live in the L.A. South Bay area and have been impressed with the improvement made regarding trucks entering the L.A. Harbor Area and the strict enforcement for emissions.

It is important for all of us living in the area to not have our lungs impacted with more diesel, gas with its nitrogen oxide and carbons polluting our air and water. The combining of the nitrogen oxide with the moisture that is common in our environment which burns the lung lining of human lungs and delicate eye tissues. I am particularly sensitive because I have asthma.

We are very fortunate to not have coal burning power plants in our area, like in the Eastern U.S, but I have been reading how China is acting on their problem and are taking their dollars and moving fast toward developing Sun Energy.

Because we have one of the largest harbor in the world at our door step we must acknowledge the importance to move ahead quickly to meet the needs of our economy, but in doing so protect the people on the west coastal area affected by cars and trucks moving through the area.

It is my understanding that Mexico is planning (or is in the process) to build a harbor in Mexico and probably will pressure congress to extend roads up through Arizona, New Mexico, or Texas. California Legislature has kept their unregulated trucks out of our harbor. We can be an example by being diligent on this issue and protect our Harbor Business and the industry that the Harbor creates.

California was a leader in smaller efficient cars, in catalytic converters, more efficient motors, cleaner burning fuels...let us be a letter today in building a cleaner California.

Respectfully,
Rose m. Schenck
Business from leaving California.

Subject: 2010sb375 we need ideas!

Comment:

Growing up, I thought there would be no way people/auto industry would just stay the way they were. I thought the self-absorbed ideas would be of a bygone era. I figured the "kids" of the 60s and 70s would wisen up in their post-childbearing years and show the way to the "greener" future. Here I am, well into my childbearing years, and the options I thought would be commonplace like hybrid fuels and cars, alternative energy, and the desire to balance travel with ecologically sound options are just starting to gain momentum. I dream of riding a horse on a "road" in the Central Valley of California the way it was done for a hundred years before the car became the way. I dream of taking my city's bus to the shopping center and not paying nearly what I would pay a taxi cab for the same route. I dream of using a train of any kind to get to new destinations. I dream of not thinking of the pounds of emissions that my children are breathin in. A car doesn't last more than a decade. I hope you consider that our lives shouldn't revolve around something so short term and harmful. I don't want to ban cars, but I do want to see better decisions. Let's get some lawmaking out of the way to allow the work to get done. Let's get a few pocketbooks out of the equation.

Subject: What decent alternative to comfy cars is there.

Comment:

Only that I sold my car and am riding my bike, motorcycle and bus and by foot. (too old for the skateboard) Everyone (except the bus drivers) ha, were VERY nice. The bus's were dirty as were the stops. Not with trash, with grunge. I wasn't allowed on the bus a couple of times because i had grocerie's. I later noticed that others were. Making me sure that I was singled out a few times for bad treatment. Maybe SHE was bored. Or HE was insecure. And children cost full fare. This made it nearly impossible for me to take my grandchildren for anything more than the experience. I felt really good about selling my car but really bad at the prejudice of the bus drivers. There were other people on the bus that had cars but preferring large SUV's for their family didn't mind riding to compensate for the size of the car. Public opinion needs to be upgraded was my insight with this experience. And to do that the drivers need to be psychologically tested and trained in PR Many people that I talked to seem to thing that Iraq owns General Motors. Good luck trying to get more oil for the buck with that.

Comment:

The goal of cutting CO2 emissions is a good one. But DON'T include the terribly disruptive "high speed rail" that as proposed ends at SF! I will tear up Peninsula communities and ultimately not provide towards the goal. What the Peninsula needs is Light Rail. The High Speed Train should go up the East Bay and eventually up the coast to Oregon and Washington. What is proposed now is very short sighted.

Subject: Please Support Healthy Communities
Comment:

Dear Chairman Nichols,

I am writing to express my strong support for smart growth and for the proposed ambitious and achievable SB 375 regional targets that will help spur local action to achieve healthier, more sustainable communities across the state.

The proposed targets, especially for the largest regions in the state, move California forward to a more sustainable future and reflect what can be achieved if land use and transportation planning are better integrated and matched with compact community design. Californians can spend less time in traffic and more time with their families if local governments move toward more compact, mixed use communities with more transportation choices.

By pursuing smart growth community planning, Californians can expect significant clean air and public health benefits. For example, the American Lung Association in California recently reported that smarter growth throughout California can help us avoid 140 deaths annually and over \$1.6 billion in health costs from air pollution-related illnesses in 2035, the year the final targets will be achieved.

Along with cutting harmful traffic emissions, reducing our dependency on driving offers a wide range of public health improvements. Building neighborhoods that support opportunities for daily physical activity like walking and biking will help reduce chronic illnesses like asthma, heart disease, obesity, diabetes and depression.

Please continue your leadership and act to adopt the most ambitious targets possible for each region.

Subject: 2035ReductionsFailToSupportS-3-05AndAreNeitherJustNotReasonable
Comment:

Here is the conclusion of the attached letter to the ARB:

Targets will have to be more stringent than the AB 32 and S-3-05 target trajectories if we are going to fulfill our world leadership responsibility and give the world a chance at avoiding climate destabilization. The 2020 Target of -7% (per-capita from VMT) can only result in an AB 32 level reduction if both "Pavley" and the LCFS factors are used. The 2035 reduction target of -13% would have to instead be 35.15%, to just meet the straight-line trajectory of S-3-05 for 2035, and this is assuming the Pavley reductions continue on the "Pavley 1" trajectory all the way to 2035. This assumption about "Pavley" may be overly optimistic. The science-supported 2035 reduction is 45%.

The best, largely overlooked strategies to reduce VMT are a comprehensive and variable road use fee pricing system, as is being installed by Skymeter; unbundling the cost of car parking; good bicycle projects and bicycle education; putting a stop to all freeway expansions; and reconfiguring sales taxes for freeways or freeway/transit combinations to instead be 100% for transit. These strategies could easily be implemented by 2020 and would easily decrease driving by a sum of at least 45%. The strategies to do this are primarily those that increase fairness for families that drive less than average.

Given this set of conclusions, it is clear that the reductions proposed for SANDAG are neither just nor reasonable. By extension, this is true for the reductions proposed for the other MPOs.

Sincerely,
Mike Bullock

Subject: SB 375

Comment:

There comes a time when we have to put short-term thinking aside and look at the long picture. So many mistakes in our country are based upon no panning for the distant future so that we can solve problems in the immediate present. This economic downturn is no reason to spur growth and development that does not serve us into the future. The concept of Smart Growth is all about development, but on a scale and design that creates communities that are sustainable - not just in terms of how people live within them - but also how they are supported economically into the future. The side benefit is that they tend to be healthy for the individuals living there as well.

Please look at SB 375 as something we can achieve - not some unrealistic dream. We can't harm our future to help our present. The future becomes the present soon enough, and we need to look back and see that we took care of what was ahead while we had the chance.

Subject: I Support Adoption of the Propoposed Targets
Comment:

Dear Chairman Nichols:

I am adding my opinion to the conversation about SB 375 because I feel it is important for individual members of the public to be heard. I am sure you receive many comments from business interests that would like to maintain the status quo. However, maintaining the present "sprawl" paradigm for development is clearly not in the interest of most Californians. Smart growth and its inherent health and quality of life benefits clearly is in the interest of the California public.

As I approach retirement age, I look forward to the improvements in public transportation, air quality, and quality of life that will accompany the implementation of SB 375. My father is still alive at the age of 95, and can no longer drive because of a stroke. The nearest public transportation is too distant from his residence to be viable for him and he is isolated unless others can drive him. He would like to be independent, and so would I if I am fortunate enough to reach his advanced age. Two of my children and four grandchildren live in Southern California where my wife and I are totally dependent on the automobile when we visit. The difference in quality of life in our children's communities from that of the Bay Area where my wife and I live is palpable as we drive to malls, put up with much poorer air quality, and have no destinations within walking distance from where we stay. Implementation of the principles of smart growth will eventually improve this situation. I urge CARB to stand firm in the face of business interests that oppose the proposed regional greenhouse gas emission reduction targets. The quality of life of all Californians depends upon CARB staying the course.

Sincerely,
John W. Schweizer, P.E.

Subject: New regulatory program could raise gas over \$9 per gallon- CONTACT CARB TODAY!

Comment:

On behalf of a wide variety of business, labor and community interests - including the California Building Industry Association, National Federation of Independent Business- CA, and many others - we would like to ask for your help on an urgent matter. The California Air Resources Board has proposed greenhouse gas emission reduction targets under SB 375 that are extremely restrictive, and ultimately impossible to meet. The targets would result in massive cost increases for the average family and small businesses, would place huge financial and infrastructure burdens on local governments, and would open the business community to unbearable lawsuits and restrictions on development. Experts at regional planning organizations have forecasted that these high regulations will result in negative impacts that will harm our state's residents and our economic recovery - for example:

- \$9.07 per gallon gas prices
- Congestion fees in metropolitan areas
- Taxes on vehicle miles traveled (VMT)
- Parking fee increases in local municipalities
- Relocation of 200,000 people into the city centers.

We need your help! The California Air Resources Board is set to vote on these targets next Thursday, September 23rd. You can help in the following ways:

- Email the members of the California Air Resources Board telling them to adopt more achievable targets in 2020 and to delay adopting 2035 targets until more comprehensive analysis of economic impacts is conducted. You can email the board members at arbboard@arb.ca.gov and the chair Mary Nichols at mnichols@arb.ca.gov. You can also call the California Air Resources Board at (800) 242-4450.

- Over 70 organizations from across the state have joined this effort. To add your name to the effort and this letter please

reply to this email.

What Happened?

After a series of public workshops focusing on setting realistic targets for greenhouse gas emission reduction, the California Air Resources Board (CARB) staff unexpectedly proposed unreasonable and unachievable targets that will impede economic recovery and impose major financial burdens on local communities. During the stakeholder process, the Metropolitan Transportation Commission (MTC), the planning, coordinating and financing agency for the nine-county San Francisco Bay Area, stated that they could achieve a 5% reduction in 2020 and 5% reduction in 2035. However, CARB's recommendation set more extreme target levels of 7% for 2020 and 15% for 2035. Similarly, the Southern California Association of Governments (SCAG), which is the metropolitan planning organization representing six counties, 190 cities and more than 19 million residents, recommended a realistic target range of 6-8% for 2020 and 3-6% for 2035. But CARB set the Southern California levels at 8% for 2020 and 13% for 2035.

Major Economic and Lifestyle Impacts

- Consumer costs. According to the MTC's professional staff evaluation of Bay Area impacts, the extreme targets proposed by CARB would result in massive price increases for families and businesses.
- Increased gas prices: The MTC concluded that even a target of 12% (let alone 15%) would require gas prices of \$9.07 per gallon to encourage less driving.
- Congestion tax: The MTC would have to institute congestion fee pricing of \$0.25 per mile for using freeways during peak periods - resulting in a 460% annual increase to travel costs.
- Parking fee increases: Parking costs across the state would be increased by \$1.00 per hour.
- Overall, CARB's targets would increase auto operation costs by five-fold.
- Population relocation. CARB's targets would force people to abandon suburban life-styles and move into city centers with higher population density. The MTC projected moving 200,000 people out of the suburbs and into the city center to meet the targets.
- Lack of funding. Local governments simply do not have the funding to support the infrastructure needs nor the planning activities that would be required under the targets. Already local governments have to cut budgets and reduce public transit service - there is no guaranteed additional funding to support the new transit needs that would be necessary to meet the targets.
- Potential loss of federal funds. The unrealistic regional planning processes required under the SB 375 could likely result in the additional loss of federal transportation funding for

local governments.

- Faulty assumptions. CARB's emission reduction targets rely on the fruition of future high-cost transportation projects that are still in early development phases. Without these projects, the targets are even further out of reach. These projects include high speed rail, high occupancy lanes, toll roads, etc.

Preventing Economic Growth, Creating Uncertainty

- Counting on a poor economy. The GHG reduction targets rely on a poor economy and lower jobs as a tool for meeting their strict emission reductions. According to MTC's analysis, forecasting and planning for fewer jobs and less economic growth could result in 5% emission reductions

- Uncertain regulatory process. CARB has released targets that are unreasonable, but has established an alternative process to re-evaluate these targets. This uncertainty over the targets is detrimental because businesses need certainty and clarity in the regulatory requirements in order to support investment decisions regarding location, expansion and operation.

- More lawsuits. The infeasible targets could be used to justify even more lawsuits designed to stop any new development. With extreme emission reduction requirements, businesses will be forced to pay huge fines, implement expensive and unreasonable mitigations, and possibly face lawsuits that could stop their development altogether if it is determined to be too far outside the city center.

- Preserving the recession. Unreasonable restrictions on development, construction and home building will prevent our economy from rebounding and harm efforts to reduce the state's high unemployment numbers.

Flawed Process

SB 375 was passed in 2008 to address regional planning for transportation, housing and greenhouse gasses. CARB set forth on a collaborative process that engaged officials at the local level to identify emission reduction targets associated with land use and transportation that are both ambitious and achievable. Regional Metropolitan Planning Organizations (MPOs) were in charge of recommending emission reduction targets that they forecasted to meet the goals of SB 375. However, CARB staff disregarded the input and analysis provided during the stakeholder process, and instead have proposed completely unrealistic reduction targets that were not even discussed or modeled.

- Targets not evaluated. The SB 375 process included numerous public workshops to examine emission reduction targets that would be both ambitious and reasonable for local governments. The MPOs evaluated target ranges, and determined that the aggressive targets being explored were overly ambitious and simply not achievable. However, CARB's targets were even higher than the most aggressive options mentioned in the workshops.

o In Northern California, the Metropolitan Transportation Commission (MTC) modeled their most aggressive target at 12% GHG reduction by 2035. The MTC highlighted that the most aggressive targets are "not considered attainable by any stretch of the imagination." Despite this warning, CARB's suggested target for the Bay Area is 15% by 2035

o The Southern California Association of Governments suggested that a GHG reduction of 5 or 6% by 2035 is attainable. They forecasted that GHG reductions above 10% by 2035 are considered too ambitious and unattainable. However, CARB's suggested target for the region is set at 13% by 2035.

· No basis for last minute change. There is no explanation as to why CARB moved way beyond the targets discussed in the workshops. They ignored public input and expert testimony, and adopted extreme targets that were never vetted in the public process.

· Ignores realistic human costs. Each incremental percentage reduction for emissions is exponential. Therefore each percentage increase in the targets requires huge behavior changes and skyrocketing costs.

We need your help! Please contact us at dsubers@ka-pow.com to find out more, or to add your name to this effort!

Subject: SB 375
Comment:

As the President of a small business in Northern California and a former Commissioner for economic development, I know how hard it is to compete with businesses from other states and internationally. Our company competes for business throughout North America in the public transportation and work truck markets and employs over 30 families trying to make a living in California. The repercussions of SB 375 would devastate our company and our employees as well as our state's economy.

The proposed greenhouse gas emission reduction targets under SB 375 are extremely restrictive and ultimately impossible to meet. The California Air Resources Board targets would result in huge cost increases for small businesses and average families, would place huge financial and infrastructure burdens on local governments, and would greatly hamper business development and growth.

We support lowering greenhouse gas emissions at an obtainable level and realistic rate. SB 375, in its current format, is neither. I implore you and the entire board to reconsider the targets and the Draconian limits it would place on small businesses in California.

Regards,

Gregory E. Schafer, P.E.

Ms. Nichols

The goals set by SB 375 are unrealistic and will cause significant financial hardship to my business and my family. I urge you to adopt more achievable targets in 2020 and to delay adopting 2035 targets until more comprehensive analysis of economic impacts is conducted.

Saving the environment at the expense of our society is unacceptable.

Sincerely,

CARB Board Members,

I do not approve of the inflated CO2 reduction targets proposed by CARB for SB 375. I do not approve of parking fees, vehicle travel fees, congestion fees, or increases in gasoline taxes considered to meet CO2 targets. Any reduction in CO2 by California is purely symbolic, and any reductions should be reasonable, without penalties to citizens or businesses. We already have the third highest unemployment rate in the nation. We cannot afford job killing symbolic acts.

Subject: Your2035TargetsDon'tSupportTheGovernor'sExecutiveOrder.
Comment:

Earl Withycombe, P.E.
South Coast AQMD Planning Liaison
Planning & Technical Support Division
California Air Resources Board

Earl,

From your just-released staff report,
http://arb.ca.gov/cc/sb375/staffreport_sb375080910.pdf, on Page 22
, comes the following very confusing 2-sentence paragraph:

"Using the data provided by the MPOs over the past four months,
the
proposed targets would result in a reduction of greenhouse gas
emissions of over three million metric tons of CO2 per year
(MMTCO2/year) in 2020, and 15 MMTCO2/year in 2035. When these
reductions are applied to the most recent statewide 2020 emissions
forecast, the emissions target for passenger vehicles in
California's 2008 Climate Change Scoping Plan is met."

I assume your first sentence is true. However, the second sentence
is false, for the 2035 value. This paragraph mixes in the 2035
reductions of 15 MMTCO2/year where it does not belong. The 2008
Scoping Plan is quantitatively ONLY about AB32. AB32 only goes out
to 2020. The 2008 Scoping Plan does NOT support the 15 MMTCO2
value
for 2035.

Nothing does.

So I have these 4 questions. What about 2035? What about the
Governor's Executive Order? What about climate stability?

My calculations indicate that a much larger reduction is required
by 2035, as follows.

(Please tell me what is wrong with this calculation. For Pavely
and
the Governor's Executive Order trajectories, I use Figure 1 of
<http://www.nrdc.org/globalwarming/sb375/files/sb375.pdf>.)

1.) Just to show how far off CARB targets are, for 2035, I will
use
a "huge" 20% reduction, to result in a 2005 to 2035 factor of .8.

2.) I will use the SANDAG populations figures, which is a growth of from 3034388 to 3984753, for a factor of (the larger over the smaller) 1.313.

3.) Using the values from the above-mentioned Figure 1, the Pavley reduction, extrapolated out to 2035, give a very nice reduction factor of .685.

4.) The LCFS factor is .9.

5.) Using the values from the above-mentioned Figure 1, the straight-line trajectory of the reduction needed to get and 80% reduction by 2050 is .525.

The four factors are multiplied to give $(.8)(1.313)(.685)(.90) = .648$. This is not good enough. We need this to be at least as low as .525.

A reduction of 35.1% will do the trick: $(.649)(1.313)(.685)(.9) = .525$

Please let me know what is wrong with these calculations. If they are correct, the ARB Directors must not approve your 2035 reductions. They are way too small.

Subject: SB 375 Targets
Comment:

Dear Linda and Mary,

I understand that the Air Resources Board will set the SB 375 regional targets during this Thursday's hearing. I am writing to encourage ARB to adopt the staff recommended targets for 2020 and 2035.

From my work on the Strategic Growth Council, I am increasingly convinced that California must make more efficient use of our limited finances and natural resources by making more sound investment decisions. SB 375 can help us accomplish these goals if it is effectively implemented. The regional targets are a vital step in that process. While the staff recommendations represent a compromise, they are sufficient to begin the process of providing greater incentives to local and regional agencies to invest public transportation funds to grow communities in more efficient ways.

There are significant additional co-benefits as well. For example, SB 375 can help Californians save several million acre-feet of water over the next few decades by shifting to more compact development strategies which demand less water. This will enable local agencies to accommodate more population growth within our limited water supplies while reducing the amount residents would otherwise have to pay for expanded water infrastructure. This also saves water for agriculture.

Effective targets will also help provide Californians with more choices to reduce the number of hours they must spend commuting to work and school. In addition to helping you meet your AB 32 greenhouse gas reduction limits, this will also help reduce the air pollution that causes alarming rates of asthma and other respiratory problems, as well as helping avoid the associated medical costs.

SB 375 is one of the most effective tools available to help policy

makers integrate various goals including mobility, housing, public health, natural resource conservation, and more efficient use of tax dollars. The regional targets you set this week are vital to bringing home SB 375's potential benefits. The staff recommendations provide a good start towards effective implementation of this important law.

All the best to you both,

Bob Fisher

Subject: AB32 - Forest Protocols
Comment:

It is with the conservation of California's native natural heritage as our highest priority that I must oppose the inclusion of the Climate Action Reserve's forest project protocol as part of AB 32, unless ARB makes the substantial revisions necessary to address the threats the forest protocol poses to forest ecosystems and wildlife habitat.

At their August 31 board meeting, the Climate Action Reserve adopted revisions to the forest protocol. At that time, Climate Action Reserve president Gary Gero announced that his discussions with the Air Resources Board led him to expect that ARB would consider adopting the revised protocol for use in the AB 32 cap-and-trade program, without further revising the protocol.

I need to make it very clear that the recent revisions adopted by the Climate Action Reserve do not address the outstanding concerns about the environmental impacts of the Climate Actions Reserve's forest protocol, and do not address the critical flaws that were previously identified by ARB in their review of the protocol. Thus, ARB must substantially revise the Climate Action Reserve forest protocol before it can be incorporated into any AB 32 compliance mechanism.

Many individuals and organizations have been advocating for more than a year for revisions to address the concerns raised by the forest protocol's inclusion of forest clearcutting as a carbon offset project, and the related threats to forest ecosystems and wildlife habitat. When these concerns were raised in September 2009, the Climate Action Reserve board promised to address these issues on an expedited basis. That never happened. Instead, they undertook other revisions, in some cases exacerbating these concerns. Under the Climate Action Reserve's forest protocol:

- Forest clearcutting and other even-age management practices that degrade forest ecosystems and wildlife habitat can qualify as carbon offset projects;
- Forest offset projects may include timber operations that convert native forest to even-age plantations;
- Forest offset projects may clearcut an entire watershed on a 50-year rotation, with 40-acre clearcuts implemented at 5-year intervals;
- Forest offset projects may claim carbon credits for the growth of trees regenerating after forest clearcutting that occurred at least ten years prior;
- Many forest projects do not have to account for losses from the

understory, litter and soil, and dead wood carbon pools;

- Many forest projects do not have to account for losses of lying dead wood, which can be both a significant carbon pool and a critical component of wildlife habitat;
- Forest offset projects are not prohibited from shifting timber harvesting to elsewhere in their timber operations, and are not even required to report such "leakage."

Unfortunately, the recent revisions fail to address these concerns, and the Climate Action Reserve announced that they do not expect to turn to these issues until next year at the earliest, after the Air Resources Board considers the current version for use under AB 32. This is particularly frustrating since the Reserve, at the request of representatives of the timber industry, expedited the development and adoption of revisions that will allow timber operators to claim credit for forest growth that is already planned to occur under business-as-usual operations.

The forest protocol in its current form is inadequate for use by ARB, as the inclusion of forest clearcutting directly contradicts AB 32's requirement to maximize the environmental benefits from a carbon market program. Forest clearcutting and the conversion of native forests to tree plantations pose the greatest risk to the climate, while simultaneously degrading forest ecosystems, water quality, and wildlife habitat, and impairing the forest's resilience to the impacts of climate change.

I strongly urge the Air Resources Board to make the changes necessary to ensure that the forest protocol meets the substantive requirements of AB 32 and does not incentivize forest clearcutting and other timber practices that threaten forest ecosystems and habitats.

Subject: CARB Target Setting for SB 375.
Comment:

Please include my voice as one in favor of the SCAG Staff recommendation to support the CARB target-setting for Southern California.

I understand the reasons that local governments are angry about the State raiding limited county-city resources and then requiring State unfunded mandates; however, this situation is not so simple.

I believe that the more ambitious targets that are recommended by CARB will promote economic development and not detract from it.

A more livable, less auto-dependent life, will make the region more attractive for businesses and residents, building a stronger economic engine to move us forward. The best way to improve the fiscal situation of local government is to promote that type of growth that can be handled sustainably.

I vote with CARB and its ambitious targets that will enable us to together re-think the future of our region!

Comment:

September 21, 2010
Mary Nichols, Chairman
California Air Resources Board
1001 "I" Street
Sacramento, CA 95814

Re: Proposed regional greenhouse gas targets for SB 375

Dear Chairman Nichols and California Air Resources Board Members:

Thank you for your efforts to implement SB 375, California's Sustainable Communities and Climate Protection Act. If implemented properly, SB 375 can result in communities that are sustainable, equitable, and healthier. It can ensure cleaner air; cleaner water; reduced rates of lung disease, obesity, asthma, and other chronic illnesses; more walkable neighborhoods and safer routes for walking and biking; protected natural areas and flourishing farms and ranch lands; and greater access to housing and transportation choices for all communities throughout California.

We live in Anderson Valley, a rural agricultural area in Northern California and are very concerned about our future with greater and greater traffic on the highway that bisects our valley, degraded water supplies, and increasingly industrial farming. I work with groups that support sustainable agriculture in Mendocino County and am president of the Anderson Valley Land Trust Board, though I am not directly speaking for those organizations.

As the first, target-setting phase of SB 375 implementation comes to a close, we encourage the Board to finalize the draft greenhouse gas proposed in the August 9, 2010 ARB staff report. These achievable targets reflect the best expertise of transportation and planning experts from regions around the state.

We also ask that the ARB commit to providing the ongoing guidance necessary to ensure that SB 375 implementation achieves its goals. We hope that ARB will provide guidance to help regions measure progress on the full range of potential benefits, including better air and water quality and more economic opportunity for all our residents.

Finally, we strongly urge ARB to identify resources for implementing SB 375. Local governments, transportation agencies and

redevelopment agencies are key partners in SB 375 implementation, and all face unprecedented financial challenges in the current economic and fiscal climate. Please work to identify and secure resources for these needs, in partnership with state agencies and bodies such as the Strategic Growth Council and the State Legislature, as well as well as federal agencies and the national Sustainable Communities Partnership.

We are grateful for the time and energy put forth by the Air Resources Board, and by the many elected officials and regional agencies that have also contributed. Thank you.

Sincerely,

Barbara Goodell

Subject: SB 375 Regional Transportation GHG Reduction Targets

Comment:

California Air Resources Board
1001 I Street
Sacramento, California 95814

The United States Air Force (AF) Regional Environmental Coordinator (REC) for Federal Region 9 has been monitoring the implementation of California Senate Bill (SB) 375 and the pending adoption of regional transportation greenhouse gas (GHG) reduction targets by the Board. The AF REC recognizes the benefits of reductions in vehicle miles traveled (VMT) and corresponding GHG reductions. The potential benefits could include opportunities to minimize future impacts generated by urban sprawl on military testing and training missions, retaining efficient transportation access to military installations, and providing enhanced quality of life for military families through transportation demand management (TDM) and transportation system management (TSM) measures. Some California installations have initiated voluntary TDM and TSM projects in cooperation with Metropolitan Planning Organizations (MPOs).

The AF REC supports the adoption of the staff recommendation for regional targets as reasonable goals which both comply with the requirement of SB 375 and provide the potential for producing benefits for continued military operations within the state. Executive Order 13514 requires Federal agencies to establish GHG reduction strategies, including for Tier 3 emissions which include employee commuting. EO 13514 also directs Federal agencies to engage in regional transportation planning processes. As major employers within selected areas of the state, we encourage CARB to provide guidance to MPOs for engaging the military installations in the preparation of Sustainable Community Strategies which integrates Federal transportation GHG reduction activities and provide ancillary benefits necessary for protection of the military test and training missions within the state. If you or your staff has any questions concerning these comments, please contact Dr Baha Zarah at baha.zarah@us.af.mil or 415 977 8843 or Mr Gary Munsterman at gary.munsterman@us.af.mil or 415 977 8884.

Subject: 15% reduction too high
Comment:

Staff's recommendation for 15% reduction reaches too far. It will convert more people and cities into opponents of SB375/AB32 which are already at risk from political opposition. Further, it will create economic chaos. Phase in. Include methods to fund the public transit that is necessary. Or include methods to fund the housing for the millions who will have to relocate from the suburbs to the cities. And include methods to address the economic devastation to the bedroom counties.

A high target puts Federal funding for public transit at risk. If we don't meet these high targets, we don't get money. Without money for transit, we can't meet targets.

Don't design California for failure. Pick a more reasonable target.

--Jean Dresden

Subject: We support a strong SB-375
Comment:

Dear Air Resource Board,

I am the Executive Director of a grass-roots climate action group that has 570 members in the County of Ventura. I am also on the City of Ventura's "Buy Local" committee, a Citizen Advisory to VC Transit Commission, on the board of the West Side Development Corporation dealing with CDB Grants, and an active member of the Westside Redevelopment effort.

As such, I see a broad spectrum of citizens both wealthy and underprivileged. Well-planned walkable, bikable, transit-friendly cities is as much of a social justice issue as it is an environmental ultimatum. We need a new green way to breathe life into our economy, while it protects our quality of life, and in fact, our very lives from fire, flood, drought, and pests.

I urge you to take the strongest stand for the good our ourselves, our future, and the people not invited to the table, but the ones to feel negative effects of climate change first. Support the intention of SB-375 with your involvement, your voice, and a vote for staff-recommended emissions targets.

Thank you for all you do.

Rachel Morris
Executive Director of VCCool

Subject: Emission Standards and Air Quality
Comment:

Please do not lessen any Air Pollution Standards or auto emission standards for California. As is well documented by the EPA and Cal OSHA, the Inland Empire has amongst the worst air quality in the Country. As a physician who cares for young children, our asthma rates continue to soar and the uncompensated ER visits for children with asthma and other respiratory conditions will rise even further if air standards are weakened.

The industry pundits dismiss the harsh reality that auto and truck emissions contribute to respiratory disease in our children and adults.

Hold your ground and do not lessen our emission standards.

T. Allen Merritt, M.D. MHA, MPH
Professor of Pediatrics, Loma Linda University Children's Hosp

Subject: 2010sb375

Comment:

While it's commendable to reduce greenhouse gas, it should not be done to the financial detriment of California citizens. By setting an extreme target number of 10 or 15 percent, you are guaranteeing additional financial hardship at a time when the population is already vulnerable. I don't want to pay higher fees or higher gas costs and I really don't want to leave the state. I also don't believe I'm alone in these desires.

A 5 percent reduction is a doable goal, 15 percent is not.

Please view this realistically and also realize there are other ways to combat global warming. In fact, on NPR the other day they cited a finding that if every roof in the world was painted white it would do more to reverse global warming than any other single measure.

Thank you,

Mary Gottschalk

Subject: Greenhouse Gas Reduction Goals
Comment:

TO: California Air Resources Board

Honored Board Members;

As a volunteer who has spent the last several years working on transportation equity issues, I must object to your proposed reduction goals. While admirable, the goal you have proposed does not consider the unintended consequences and could, in fact, cripple local economies and ruin families financially. It took us decades to get to this place; it shouldn't take decades to fix our emissions, but it cannot be done without careful coordination.

I am involved in local and regional long term planning efforts, so my comments are not just a knee jerk reaction. I am a former Planning Commissioner for the City of San Jose, have worked on Redevelopment projects for over a decade, focusing on disadvantaged neighborhoods. I've sat on any number of local planning committees related to planning, land use and transportation. I sit on the Metropolitan Transportation Commission's Policy Advisory Committee and chaired the equity analysis committee.

I know that local and regional bodies have worked hard to coordinate long term land use and transportation measures. Implementation of policy is dependant upon funding. Unless you can provide the funding to speed up this process, implementing excessive target goals will simply create problems the local agencies cannot handle.

We cannot just assume that we can, for instance, push people from the suburbs into urban settings as a means of reducing road emissions. The urban centers are in a delicate balancing act of planning for increased long term growth while preserving, maintaining and enhancing existing infrastructure. Local transit agencies are not funded to take on a rapid shift in ridership.

The economic reality is it can't be done. Not at this point in time.

I strongly, strongly, strongly urge you to reconsider your target goals and reduce them to the levels recommended by MTC and other regional bodies. They have arrived at their numbers by consulting with local bodies and working with hundreds of interested residents, businesses and non-profits. They have not simply made up numbers, their numbers reflect a great deal of work from staff around the region and also, by the way, from volunteers like me.

Please act on the information gathered and compiled. Please respect the goals set by MTC and other agencies. They are reasonable and achievable goals based on existing infrastructure, and the long term planning and policy process that will allow us to reduce emissions while still growing as projected.

Unless you plan on financing the upgrade, installation or expansion of our transit network, it is irresponsible to attempt to impose goals that can't be met.

Sincerely,
Randi Kinman
San Jose

Comment:

I am a small business owner with 15 employees. The costs associated with the adoption of the greenhouse reduction targets will be costly to all of my employees and me. My employees, who live in Santa Clara Valley, have no practical alternative and will have no alternative to driving to work. Arbitrary targets are not the answer. Penalties on hard working employees are not the answer. Punishment of small business owners is not the answer. I have fought hard to keep my business in California even though taxes here are the highest in the nation. I don't have to stay here! By adapting these targets, CARB could not have constructed a more convincing argument for why continuing to doing business in this State is hazardous to the health of small business.
