Subject: Comments submitted on behalf of Renewable Fuels Association

Comment:

I am resubmitting comments previously sent on June 1, 2007 to address a problem with attached files reported to me on June 5 by Steve Brisby of ARB staff. Two files in portable document file (pdf) format have been placed into a .ZIP file as instructed and attached to this message.

The attached files contain a cover letter and a report provided as comments to the subject public hearing on behalf of the Renewable Fuels Association.

Subject: changing diesel fuels and engines

Comment:

I think this is a case of the California air resources board meddelling with things that affect our economy and life styles and you don't have all the facts except for what you guys won't too hear Just like the fiasco of M T B E in our gasoline You the board members had no clue what it was going to do!!! And again your going to make major changes Just because you think its a good idea not knowing all the facts!!!!

Please stop trying to do the wrong things and pay attention to the true facts before you make a mess of the diesel fuels and the transportation industry!!!

Thank you
Concerned citizen
Steve charlesworth

Subject: Biofuel disaster must be stopped now!

Comment:

Biofuels are causing food and water shortages, rapid food cost inflation, and are speeding global warming.

Oil price increases have not shrunk the human food supply, but biofuel production has! The more biofuels we produce, the less food we have to eat, because we grow biofuel crops, even switchgrass, using the same land, water, fertilizer, farm equipment, and labor we use to grow food. The world is running out of wheat because too many wheat farmers have switched to growing corn for ethanol production. The USDA states that by May US wheat supplies will be lower than any time since 1948.

The FAO states global food prices rose 40% in 2007. When America foolishly turns its food into fuel, we raise food prices worldwide which gives other countries a financial incentive to burn down rainforests in order to grow more food. It takes 9,000 gallons of water to create just 1 gallon of biodiesel, so biofuel production aggravates water shortages.

The twisted logic of biofuel advocates has been that we should gladly starve the world today by turning our food into fuel, but in a few years the world can eat again because we will soon make biofuels out of easy to grow inedible cellulose crops instead of food. Three agricultural economists with insider knowledge from Iowa State University have published a study which states that ethanol made from cellulose will never be affordable. Federal tax credits would have to be raised from the current \$.51 per gallon for corn ethanol to \$1.55 per gallon for cellulosic ethanol. That means no ethanol from switchgrass, wood chips, or crop waste will ever be sellable.

<http://www.card.iastate.edu/publications/DBS/PDFfiles/08wp460.pdf>

This comes on top of the recent Princeton University study published in the journal SCIENCE that concludes that all current and proposed future biofuels, even switchgrass, are far worse for the environment and global warming than using ordinary gasoline. <http://www.sciencemag.org/cgi/content/abstract/1151861>

Nitrogen fertilizers used to grow anything unleash nitrous oxide, a greenhouse gas 296 times more powerful than carbon dioxide. Farming contributes more to global warming each year than all land, sea, and air transportation combined, so farming should only be used for essential food production.

The global destruction caused by biofuels makes no sense

strategically because by 2015 it is estimated that oil from shale will cost only \$30 a barrel to manufacture, and there is far more oil potential in American shale than in the entire Middle East before drilling began in 1908.

The "energy independence" argument for biofuels is a hoax because American biodiesel made out of soybeans costs the equivalent of making regular diesel out of oil at \$232 a barrel. Making ethanol from corn costs the equivalent of oil at \$81. a barrel and uses 28% more fossil fuels than gasoline.

MORE BIOFUEL FACTS -

Subject: WSPA Comments
Comment:

Please disregard last submittal - we did not have both attachments in a zip file. Thank you.

Attached are the Western States Petroleum Association (WSPA) comments on CARB's modified text/15 day package for the proposed 2007 amendments to California phase 3 reformulated gasoline regulations.

Our industry remains concerned over the inclusion in the rule of an alternative emissions reduction plan (AERP). As currently designed, this unprecedented AERP amounts to a penalty payment program. The record before ARB in this rulemaking demonstrates that the AERP rests on an unrealistic and unreasonable compliance timeline, and it is therefore unjustified.

We look forward to continued dialogue on this important matter.
