Spokesman Dimitri Stanich is noted as saying (paraphrased) costs for installation of equipment can be overcome by raising gas prices, and that low volume sellers would have to raise prices more.

This attitude - just raise prices, and the hell with whether or not it drives people out of business - is, of course an indirect tax on consumers. It takes place in an environment of deflation, mounting job losses, and general economic chaos... and California leads the nation in these things.

I'm certain you've overlooked some possible way to squeeze the economy even more, so go back to the drawing board and don't come back until you're in depression.

My advice to the governor is that the best way to eliminate Caloifornia's massive shortfall is to eliminate agencies such as CARB

Comment:

I would just like to say that this new, required dispensing system has been the biggest nightmare since installation. I have lost customers left and right because these "no-drip" nozzles have shut-off delay that causes them to spray gas all over the sides of their vehicles. I have seen a few classic car and motorcycle owners get upset over their paint jobs being ruined or because of the lack of compatibility between their fill tubes and your nozzles. I have had to reboot my pumps because this new system put my pumps into fault mode. This usually happens during the busiest times. I understand the test market was done with all newer vehicles. Whoever thought that one up needs to rethink the process. This system that was designed to keep fuel vapors from touching the atmosphere, and with that in mind, I would like to say that I am now cleaning more fuel spills than ever.

Thanks for keeping the bureaucracy employed.

Subject: Let's improve our gasoline delivery system

Comment:

I support the CARB with the idea of making gas pumps and the hoses more efficient and less leaky. If we can do something as simple as replacing the hoses on gas pumps to reduce the fumes that go into the air we should do it. Our health is more important than a small financial price.

Plus we are wasting money by letting the gas evaporate into the air. Let's save money and improve our health with this smart idea.

Please impliment this new regulation as soon as possible.

Thank you.
