

Form Letter 1 for Comment 99 for Statewide Truck and Bus Regulation 2008 (truckbus08) - 45 Day.

First Name: Lindsay
Last Name: Space
Email Address: lspace@alac.org
Affiliation: American Lung Association

Subject: Fighting diesel pollution
Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California. California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives. To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Subject: Diesel Truck Rule

Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California. In my community that includes the agriculture trucks that surround our schools and homes.

California has the worst air quality in the nation. Trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. In the Central Valley, where my asthmatic children live, 12,000 vehicles drive by home every hour. At least 50% of those vehicles are trucks and buses. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives. As a respiratory therapist and concerned parent, I see too many people suffer for the damaging effects of diesel truck emissions.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Subject: Statewide Truck and Bus Regulation 2008
Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Sincerely,

Jewell Peters

Comment:

I am very concerned about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Many of these pollutants emitted by diesel trucks have been shown to be carcinogenic. Pollution from trucks and buses results in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Also, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

Again, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations to protect the health of all Californians.

Sincerely,
David Hagyard

Subject: Diesel pollution impact on health

Comment:

As a physician, I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses. I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

Trucks and buses are a major contributor to the particulate matter and ozone pollution that cause ASTHMA, CANCER, HEART ATTACKS and other serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

Diesel pollution increases medical costs for private and public insurers, increased disability costs, time lost from work for businesses, and an emotional toll on patients and their families.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Subject: Pass a strong diesel truck regulation
Comment:

Dear CARB Board Members,

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Thank you for your time to this matter.

Laura Fultz Stout
Fresno, CA

Subject: Support cleaner air Statewide Truck and Bus Regulation 2008
Comment:

I urge the California Air Resources Board to support the On-Road Heavy Duty Truck and Bus Rule. We need this Rule to reduce emissions and meet state and federal health-based air quality standards, reduce global warming pollution, benefit public health and save lives.

Together, diesel particulate matter and NOX from trucks and buses are taking a very serious toll on the health and well being of Californians, especially those groups that are most vulnerable: children and the elderly. In fact, an estimated 4,500 premature deaths and 71,000 cases of asthma attacks and lower respiratory symptoms are caused by diesel pollution related to trucks and buses each year – and these numbers are only expected to rise. In addition, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

Since 50 percent of all Californians live near a highway, these pollutants impact each and every one of us. To protect the health of all Californians, please adopt a strong, effective and health protective On-Road Heavy Duty Truck and Bus Rule.

Thank you for your consideration.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

I have asthma and hyper-reactive airways and am severely sensitive to vehicle exhaust. It makes me sick, literally, so I have first-hand experience with the negative side-effects of air pollution.

Thank you for your attention.

Sarah Van Mantgem

Subject: Diesel Truck Regulations
Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Subject: Diesel
Comment:

I have always been affected by the effects of diesel fumes. They make me dizzy and nauseous. When air pollution standards were set for vehicles, I could never understand why diesel was not regulated. My Nissan truck has to be retired because the check engine light is on and will cost too much to fix, but the truck passed the actual smog test! Everyday I get behind some smog spewing vehicle with current reg. tags. Some of them are "classic" cars (which need to be taken off the road), but many of them are diesel burning vehicles. The negative health impacts of diesel pollution from trucks and buses have been documented. I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives. And then there is the issue of Global Warming.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Comment:

As someone who suffers from asthma I am writing to express my personal deep concern about the negative health impacts of diesel pollution from trucks and buses. Despite having well controlled asthma I suffer daily from exposure to diesel exhaust and can only imagine how terrible the consequences must be for those less fortunate than I. Consequently, I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

Comment:

I am writing to express my deep concern about the negative health effects of diesel exhaust pollution from trucks and buses.

I am a frequent bicycle rider -- both for exercise and for doing errands including grocery shopping. One of my frequent concerns is the exhaust from diesel powered vehicles that I am forced to breathe while breathing heavily.

I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Thanks,

Mike Sasnett

Subject: ELIMINATE DIESEL PARTICULATES IN OUR AIR
Comment:

STOP POLLUTION FROM DIESEL EXHAUST PLEASE--for our health's sake.

I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the sources of diesel particulate matter in California.

Many of us are suffering daily from the poor air quality due to the particulate matter in the air spewed by buses and trucks. Never having smoked, my reduced lung capacity and lung disease is the result of the air I have been breathing in California. Due to the required medications, I have reached the Medicare limit for covering my prescriptions. Now I am required to expend \$1000s to purchase the prescribed medications to be able to continue living.

My situation is mulitplied 1000s of time over and is costing Medicare \$\$\$\$\$ not to mention endangering our quality of life.

Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

PLEASE protect the health of all Californians, AND adopt the strongest REGULATIONS possible to eliminate diesel particulate CONTAMINATION in the air we breathe.

Sincerely yours,
Ann H Duncan

Comment:

Please give us all the gift of fresh air: regulate the emissions from all diesel busses and trucks in California. Most Californians live near highways and are exposed daily to the fine particulate emissions from diesel vehicles which increase their risk of respiratory diseases. Truckers themselves are exposed to the hazardous diesel exhaust every day and would personally benefit from stringent exhaust controls.

I live in a quiet residential neighborhood in Menlo Park, California. However, over the past three years several of the homes near my home have been torn down and replaced by large homes with full basements. Over these past three years, more than 1000 big rig diesel trucks have driven past my home hauling dirt, delivering building supplies and dropping off dirt moving equipment. On many days the air is thick with the smell of diesel exhaust. I have had to avoid outdoor activities on weekdays to avoid the diesel exhaust.

Please enact the strongest possible regulations to eliminate diesel exhaust emissions! Our health depends on you.

Comment:

I live with someone who suffers from asthma and I am writing to express my strong concerns about the negative health impacts of diesel pollution from trucks and buses. While being fortunate enough to not suffer from asthma I still find to diesel exhaust to be extremely irritating and know how terrible the effects of this pollution are for people less fortunate than myself. I therefore urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Comment:

Dear Board members,
I understand you are about to make some decisions r.e. your stance on diesel emissions. I urge you to take the strongest possible position to clean up the disgusting emissions of big rigs in our state. I get an instant headache whenever I am behind one of these trucks and I have to pull over, wait 5 minutes and then continue on my way, only to encounter another diesel vehicle. The mathematics alone, comparing the cost of using cleaning devices on these trucks vs. the cost of an asthma attack and the misery involved, seems to make this an obvious choice. It is time to clean up the secondary air that all of us must breathe. PLEASE, give us stronger regulations to do so. The collective lungs of California will thank you.
Fred Mundy

I agree heartedly for strong regulation on truck and bus diesel vehicles. With more on the road, and more large personally owned trucks that are diesel, the air quality will continue to get worse with the spewing of particulate matter into the air we all must breathe.

Please vote to regulate these beasts of the road.
Thank you,
Margaret Murphy

Comment:

I am greatly troubled about the negative health impacts of diesel pollution from trucks and buses. The California Air Resources Board should adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

Trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences in California. We have the worst air quality in the nation. The pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Moreover, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, and to save billions in healthcare costs, I plea that the California Air Resources Board adopt the strongest possible diesel truck regulations.

Comment:

Dear Cal Air Resources Board

On December 11th, you will be voting on the On-Road Heavy Duty Truck and Bus Rule. Such a rule is essential to reduce emissions and meet state and federal health-based air quality standards, reduce global warming pollution, benefit public health and save lives.

Congrats on taking the very important job of cleaning up California's air. You are doing great work, and work whose time has come and that is increasingly wound together with our economy and our future health and prosperity.

Please adopt the strongest regulation possible! I see the effects that being near diesel trucks and buses has on my daughter's asthma in the short term and I worry about the risks to her in the long term. Do us right and stand up to the trucking industry's tales of woe. We are all hurting and greener energy will help us all in the long run.

Thanks for your time.

Sincerely

Kathy Sullivan

Subject: DIESEL POLLUTION

Comment:

I came to Southern California from the Upper Midwest over 30 years ago. Before coming here I had never smoked, nor did I have either allergies or asthma. In those thirty years I lived in residential areas (Yorba Linda, Placentia, Anaheim) more than several miles from freeways, and while working I commuted by car every day from ten to thirty miles a day. I now have CHRONIC ALLERGIES, ASTHMA and BRONCHITIS. These developed gradually over time, which I can only attribute to my LONGTERM EXPOSURE TO CALIFORNIA'S DIESEL-POLLUTED AIR.

I am writing to express my OUTRAGE about the negative health impacts of diesel pollution from trucks (especially those from MEXICO) and buses and I EXPECT the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the WORST air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I DEMAND that California Air Resources Board to adopt the strongest possible diesel truck regulations.

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California. California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives. To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Subject: Dec. 11,2008 On road heavy duty truck and bus rule

Comment:

Please adopt this rule to limit diesel particulate and NOX emissions from trucks and buses. California has the worst air quality in the nation and it is an embarrassment for the state not to take action. Trucks and buses are major contributors to carbon particulate, ozone and NOX pollution. This causes lung and heart disease with an estimated 4,000 premature deaths and 70,000 cases of asthma each year.To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.
Thank you for your time.

Subject: Regulation of Diesel Vehicles

Comment:

I would like to express my vote for increasing regulations on diesel vehicles. I remember reading about how manufacturers were tuning diesel engines to make them run leaner, thereby saving fuel for the owner, but unfortunately this was causing an increase in smog output. That is just wrong. We all are becoming more aware of how unhealthy the fine particulate matter that is output from diesel engines is to our health. We should be trying to clean up the air, and the earth in general for that matter, in every way possible. Let's move forward in making the air cleaner by increasing the requirements and testing of on-road diesel vehicles.

Thank you.

Colin Pinoni

Subject: diesel air pollution
Comment:

Please vote to get diesel vehicles off the road. The air pollution created is horrible. Look at Europe with all their diesel cars all these years. Their buildings are blackened by the soot.

One hates to drive behind a diesel truck or car because the bad smell and polluted air comes right into your car.

Please take action on this. We need to work towards more efficient energy sources and California has always led the way.

Thank you,
Anne Kennedy, RRT, AE-C

- Diesel pollution causes an estimated 4,500 premature deaths each year
 - 71,000 cases of asthma attacks and lower respiratory symptoms are caused by diesel pollution related to trucks and buses each year
 - Truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives
- Diesel pollution also causes acute bronchitis, heart attacks, and strokes as well as delayed lung growth and development in children.

Subject: Clean up the top sources of diesel particulate matter in California

Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 1,500 premature deaths and more than 38,000 asthma attacks annually.

Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations

Subject: Truck and Bus Regulation 2008

Comment:

I am writing again to you knowing that this week the California Air Resources Board will be voting on the On-Road Heavy Duty Truck and Bus Rule. Such a rule is essential to reduce emissions and meet state and federal health-based air quality standards, to benefit public health, reduce global warming pollution and save lives.

I am deeply concern about the negative health impacts of diesel pollution from trucks and buses and I urge you to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

It is shocking to know California has the worst air quality in the nation and that trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. More distrubing is to know that pollution from trucks and buses result in an estimated 1,500 premature deaths and more than 38,000 asthma attacks annually.

Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives. How will you be able to justify not protecting the health of all Californians if you do not adopt the strongest possible diesel truck regulations? Adopting the strongest regulations is the responsible and right thing to do.

Thank you.

Ofelia Alvarado

Subject: Please Vote to pass a strong diesel truck rule

Comment:

California's Central Valley is one of the most polluted areas of California. It is not fair that some industries benefit from the transportation of goods through our valley leaving us behind only the pollution that is taking a big toll on our population, specially our children.

It is time we change that "impossible" or "unfeasible" attitude we have when it comes to protecting the health of our communities.

Please help us improve the quality of the air in our valley by voting on a strong diesel truck rule.

Comment:

I join with the American Lung Association in writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 1,500 premature deaths and more than 38,000 asthma attacks annually.

Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

Personally, I am a sufferer of Asthma caused by pollutants and exhaust is a major culprit in my attacks. I have racked up tons of \$\$\$ in doctor bills and have come close to death many times over the health issues caused by the smog in our Central California air. The air quality of Bakersfield (KERN COUNTY) has become one of the worst areas in California to live as we sit in a valley where smog collects and has nowhere to go. California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. (As a woman, I am very concerned about the effects that the particulate matter poses to my health and others. Women especially, are affected by particulate matter as it is a major source of lung cancer). I have had my share of health issues, but have found that breathing, or not breathing as the case is at times; is the most frightening aspect, as not breathing, always leads to premature death. (I have had many asthma attacks in the recent past...I'm talking recent months, and they have been extreme). NOONE should have to live with the fear of dying from drowning from lack of oxygen on a daily basis. Not getting enough air in the body affects many other areas of a persons well-being. It affects brain function and affects other bodily functions. I am a 40 year old, full-time working mother of two young boys. I have suffered from bronchial asthma for the past 5 years and it continually is worsening, to a point where my asthma medications are no longer assisting my breathing (and I am on nearly everything available for asthmatics). As my asthma is quickly becoming worse, I fear that I will not live to see my children have families of their own and I will become a burden to society as I will soon find myself on an oxygen tank and housebound. I have a zest for life and living it to the fullest, but the air quality has hampered my contact with the outdoors in a major way. If the air quality is poor or near poor, I am unable to exercise outdoors or even sometimes spend time in my car on the road. I am seriously looking for other areas of America to live due to the extreme pollution of my area, but I am finding that there aren't many suitable areas to go to. Everywhere is being affected.

Pollution from trucks and buses result in an estimated 1,500 premature deaths and more than 38,000 asthma attacks annually.

Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Please consider my voice.

Thank you for your time.

Subject: Diesel Pollution
Comment:

Dear Ken,

This Friday, December 12th, the California Air Resources Board will be voting on the On-Road Heavy Duty Truck and Bus Rule. Such a rule is essential to reduce emissions and meet state and federal health-based air quality standards, to benefit public health, reduce global warming pollution and save lives.

Your voice is critical! Take five minutes now and tell CARB how important the health of Californians is to you!

How does diesel pollution impact Californians?

Diesel pollution causes an estimated 4,500 premature deaths each year
71,000 cases of asthma attacks and lower respiratory symptoms are caused by diesel pollution related to trucks and buses each year
Truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives
Diesel pollution also causes acute bronchitis, heart attacks, and strokes as well as delayed lung growth and development in children.

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 1,500 premature deaths and more than 38,000 asthma attacks annually.

Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Thanks so much for this chance to provide public input.

I am deeply concerned about what diesel pollution from truck and buses is doing to our health. We all breathe the air.

I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 1,500 premature deaths and more than 38,000 asthma attacks annually.

Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Michelle

Subject: For a Stronger Diesel Truck rule!

Comment:

It is a known fact that people find change hard to deal with. Passing a stronger regulation on emissions for diesel trucks is something that people aren't used to, but that doesn't mean that it isn't a necessary and essential change. As a group of people in charge of air pollution, it is your duty to pass the strongest regulation possible in order to save lives. It is obvious to everyone that the Central Valley has the worst air in the state and it is about time someone did something about it. There is only going to be more people and more cargo moving through the Valley in the future, now is the time to start regulating the Number 1 source of pollutants in the Valley: diesel truck emissions.

Subject: Diesel pollution impact on health of Californians

Comment:

To Whom it may concern;

I am a healthcare professional, a clinical pharmacist and among my duties I take care of people with asthma and other lung diseases as well as heart disease. I am writing to express my deep concern about the negative health impact of diesel pollution from trucks, buses and boats. I sincerely urge the California Air Resources Board to adopt the strongest regulations possible to clean up diesel particulate matter in California. This particulate matter is a major contributor to asthma, cancer and heart disease, resulting in thousands of premature deaths every year in the general public and also almost doubles truck driver's lifetime risk of developing lung cancer.

Diesel pollution is ugly, smells bad, and it is expensive, increasing medical costs for individuals, insurers, increases disability costs, and cost in time lost from work, as well as quality of life.

We can't continue to live in the past by allowing continuation of conditions forcing these illnesses on the public. We simply cannot afford not to protect the health of Californians.

December 9, 2008

Chairwoman Mary Nichols and Members of the Board.
California Air Resources Board.
1001 I Street
Sacramento, CA 95812

RE: Proposed Statewide Truck and Bus Regulation

Dear Chairwoman Nichols and Board Members:

I am writing to urge you to adopt the Diesel Truck Rule because these issues impact me as a community resident of Pacoima, CA.

I live nearby a commercial center which receives diesel trucks throughout the day, and on many occasions, they have the engine running for long periods of time, if not all of the time. Therefore, my neighbors and I are exposed 24 hours a day to the diesel exposure and run the risk of developing respiratory illnesses or having an asthma attack.

I am impacted by my living situation, because I have the experience of having my niece and grandson diagnosed with asthma at a very early age. I also see the children of others diagnosed with asthma. Lastly, I am also impacted by seeing my adult neighbors being taken to the emergency room because of asthma attacks.

I therefore, would urge you to vote in favor of the Diesel Truck Rule.

Sincerely,
Josefina Alvarez

Chairwoman Mary Nichols and Members of the Board
California Air Resources Board
1001 I Street
Sacramento, CA 95812

RE: Proposed Statewide Truck and Bus Regulation

Dear Chairwoman Nichols and Board Members:

I am writing to urge you to adopt the Diesel Truck Rule because these issues impact me directly. I live in the community of Pacoima and have three children, one of which has been diagnosed with asthma and another with bronchitis. This is very traumatizing for me. As much as possible, I have to prohibit my children from playing outside for more than 30 minutes, and I have to make sure they spend the majority of their time inside. This affects their learning and development because they are not in contact with the outside environment as much as I would like them to be.

The majority of my neighbors have children with asthma, or other respiratory illnesses. My community is surrounded by three major freeways, landfills, industries, an airport that pollutes while providing limited benefits, and commercial centers. These surround schools and homes. For me, diesel trucks are like mobile industries, as they leave the contamination wherever they go, and thus, the importance of regulating these mobile sources. I am concerned that long term exposure to diesel exhaust can cause cancer.

I demand change!

Thank you,
Marcela Herrera

December 05, 2008

Chairwoman Mary Nichols and Members of the Board
California Air Resources Board
1001 I Street
Sacramento, CA 95812

RE: Proposed Statewide Truck and Bus Regulation

Dear Chairwoman Nichols and Board Members:

I am writing to urge you to adopt the Diesel Truck Rule.

My name is Maria de los Angeles Trejo, and I have lived in
Pacoima, CA for three years. I am in favor of the "Diesel Truck
Rule."

I have a daughter who is 11 years old who was diagnosed with
asthma in late 2007, a baby who is 1 ½ years old who was diagnosed
with asthma in March of this year, and I too, at 34 years old was
recently diagnosed with asthma in June of this year. I would also
like to share that in February of this year, I had an abortion at 6
months in my pregnancy. My doctors could not provide me with an
explanation; they only told me that these cases are more common
than I had thought.

I am a parent volunteer at an environmental organization and have
learned about the health problems which diesel contamination may
cause. At night, I fall asleep worried and feeling impotent because
respiratory illnesses do not receive the attention due to them. I
have seen one of my daughters on the brink of death, and have lived
through the agony of not being able to breathe. I live in front of
a commercial center and have seen diesel trucks at all hours
throughout the day, including dawn and they are stationed for over
half an hour with the engine running. Only a street separates my
home from the center.

As a resident of Pacoima, I believe I have the right to live a
healthier life. I know it will not be easy, however, I cannot
stress enough the importance of reinforcing these types of rules
that will in the long term provide economic benefits for the state,
considering that less asthma inhalers will be handed out and there
will be less people filling the emergency rooms.

I appreciate your attention to this matter and would like to let you know that I am willing at anytime to present the dates wherein my family was diagnosed with asthma.

Attentively,
MARIA DE LOS ANGELES TREJO

Comment:

To Whom It May Concern:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

I have two brothers who are local San Joaquin Valley owner operator truck drivers who travel throughout California and are the soul providers for their families and with diesel soot affecting the sake of their lives and family they are willing to follow this strong rule. They understand that this will help the environment and their lives, so please help consider to enforce a strong truck and bus rule.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Sincerely,

Raquel Ortega

Subject: Diesel Regulations!

Comment:

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 1,500 premature deaths and more than 38,000 asthma attacks annually.

Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations. I realize there are financial considerations involved in this decision as well but urge you to take a long-term stance. What we need is cars, trucks, and buses that can run more efficiently on any sort of fuel with less emissions!

Thank you.

Subject: Vote YES on In-Use On-Road Diesel Vehicles
Comment:

Dear Honorable Chairman Nichols & ARB Board members,

My name is Maria Becerra. I am a resident of the city of Commerce, CA. As you all know, my community is heavily impacted by deadly diesel pollution, which comes both from the rail yards in my city and from the huge amount of trucks on the roads.

Today, I urge you to pass the In-Use On-Road Diesel Vehicle Regulation for the following reasons:

As a mother, I do not want my three children to be one of the 71,000 cases of asthma caused by diesel pollution.

Currently, the schools my children attend and the parks in which they play are surrounded by diesel pollution from trucks. Next year, my daughter will be taking a bus to school, and I want that bus to be the cleanest it can be.

First and foremost, I am a mother. I am also a daughter, a sister and a friend. Today, I ask that you think about your daughters, your mothers, your friends and their health. Vote Yes on this regulation to move forward in cleaning our air and making all our lives a little safer.

Thank You,

Maria Becerra.

I am writing to express my deep concern about the negative health impacts of diesel pollution from trucks and buses and I urge the California Air Resources Board to adopt the strongest regulation possible to clean up the top sources of diesel particulate matter in California.

California has the worst air quality in the nation and trucks and buses are a major contributor to the particulate matter and ozone pollution that causes serious health consequences. Pollution from trucks and buses result in an estimated 4,500 premature deaths and 71,000 cases of asthma and lower respiratory symptoms each year. Equally important, truck drivers are 1.5 to 2 times as likely as workers not exposed to diesel exhaust to develop lung cancer during their lives.

To protect the health of all Californians, I urge the California Air Resources Board to adopt the strongest possible diesel truck regulations.

Subject: Vote YES on In-Use On-Road Diesel Vehicles Regulation
Comment:

Dear Honorable Chairman Mary Nichols & members of the Board,

My name is Miguel Ortega. I am a concerned resident of the city of Commerce, California. Today I want to address my support for the Truck & Bus and Greenhouse Gas regulations.

In Commerce, there is a tremendous amount of truck traffic: we have the I-710 and I-5 FWYs. Not to mention, that there are also two major rail yard facilities on each side of my community.

Today you can vote to pass a resolution that could affect you as well as our community, and enforce the toxic emission regulation throughout the state.

I urge you to pass this resolution for the following reasons:

Our state cannot continue to stand as deadly diesel pollution causes hundreds of premature deaths each year.

Our state cannot continue to stand as 71,000 new cases of asthma and other respiratory symptoms make our children's lives miserable.

Our state cannot continue to stand when we already know that the biggest source of pollution in our state and regions are all due to diesel pollution.

Please take action, and stop our state's inaction towards helping end global warming.

Thank You,

Miguel Ortega
