First Name: Liza
Last Name: Ward
Email Address: lizaward@paperspast.com
Affiliation:

Subject: Consumer Production Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Liza Ward

Form Letter 22 for Comment 1 for Consumer Products Regulation Amendments (cp2010) - 45 Day.

First Name: Julia
Last Name: Strickland
Email Address: jujala@earthlink.net
Affiliation:

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Julia Strickland

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Matt Walker

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Therese Ryan

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a person who is concerned about clean air, especially that inside my home, I'm asking the California Air Resources Board to adopt the stronger 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products like multipurpose cleaning products, metal polishers, insecticides and window cleaners.

These compounds contain dangerous, smog-forming vapors that are unhealthy and contaminate our air. Everyone, especially, asthmatics, are vulnerable to the effects of the chemicals that are given off by products often used where we work, live, study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

It is extremely important for you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Richard DiMatteo

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Brian Cohen

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Richard Sanders

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Keenan Sheedy

I have several pets and a spouse that has allergies. I worry that the wrong product could make them sick or with the pets kill them. I should not have to worry for my families health everytime I clean the bathroom. My only worry should be getting things clean, not will the off gassing or residue make me or my family ill.

Thank you.

Sincerely,

RG

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Melvin Tracy

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I STRONGLY URGE the California Air Resources Board to STRENGTHEN AND ADOPT the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Mark Feldman

Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to place reasonable requirements in place regarding consumer and environmental safety. As a person who works in the consumer product industry I have access to extensive safety data and scientific studies regarding these materials. At this point CARB has moved beyond meaningful limitations of these materials and has crossed into limiting the use of materials in a manner that often creates less efficacious products. That means that more product must be used to achieve the same result or the products themselves are less effective - less effective brake cleaners can lead to deaths! Addressing Automobiles, Transportation Vehicles, and out of control Forest Fires represent a much greater opportunity to reduce pollution!! At this point CARB is minimizing the use of natural materials that represent no environmental risk because of their VOC content which does not coorelate to ozone depletion or smog creation. Please review the current program in place and adopt a more science based approach to this process!!!

Sincerely,

Cynthia Reichard

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Fabiola Lao

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

David Fetzer

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

molly arthur

Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce OR ELIMINATE the volatile organic compounds(VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. ALL OVER THE COUNTRY, THERE ARE TOXIC LAUNDRY PRODUCTS SPEWING OUT OF LAUNDRY DRYERS. My family uses and emits none of these products, but we are bombarded with them by breathing, every single day we drive or walk through towns and neighborhoods. Ridiculous that we have to have our senses, and body tissues, filled with synthetic fragrance and other toxic products. I can obtain NO safety data or reports from the manufacturers, or the federal government. Please prove that you have not been "bought out" by P&G, Johnson Products, Sun Products, etc., and take these products off of the market. Clothes can easily be cleaned with old fashioned Borax, washing soda, baking soda, and white vinegar.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

Subject: Consumer Product Regulation
Comment:

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.

- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.

- According to the National Institute for Occupational Safety and Health, teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Janice Gloe

Action Alerts
CA

Dear Action Alerts:

Mary Nichols
Chairman
California Air Resources Board
1001 "I" Street
P.O. Box 2815
Sacramento, CA 95812

Dear Chairman Nichols,

As a consumer and concerned citizen, I urge the California Air Resources Board to strengthen and adopt the 2010 Consumer Products Regulation Amendments. This would reduce the volatile organic compounds (VOCs) found in products such as multipurpose cleaning products, metal polishers, insecticides and window cleaners.

VOCs are toxic, smog-forming emissions that harm our health and contaminate our air. Everyone is vulnerable to the effects of these chemicals, which are emitted by products often used where we work and live, as well as where our children study and play.

- Many children in our communities suffer from asthma, and the chemicals emitted by cleaning products at school only increase their chances of an attack or of developing asthma in the future.
- A recent study by the Journal of Occupational and Environmental Medicine found that 12 percent of work-related asthma cases are linked to the use of cleaning products.
- According to the National Institute for Occupational Safety and Health,

teachers and janitors have the highest asthma rates in the working population.

I encourage you to strongly regulate and reduce the harmful chemicals in consumer products. In doing so, we can set an important precedent in protecting the health of families and workers—not only in our state, but nationwide as well.

Thank you.

Sincerely,

Kristine Andarmani

Subject: Consumer Product Regulation
Comment:

Estimada Presidenta Nichols,

Como consumidor y residente interesado, solicito la Mesa para Recursos del Aire de California (CARB) que fortalezca y adopte las Enmiendas a los Reglamentos de Productos de Consumo 2010. Esto reduciría los componentes orgánicos volátiles (VOC's por sus siglas en ingles) que se encuentran en productos de limpieza multiusos, pulidor de metales, insecticidas y limpiador para ventanas, entre otros.

Los VOCs son emisiones toxicas que forman smog, dañando nuestra salud y contaminan nuestro aire y agua. Todos somos vulnerables a los efectos de estos químicos emitidos por estos productos, los cuales muchas veces son usados donde vivimos y trabajamos, al igual que donde nuestros niños estudian y juegan.

- Muchos niños en nuestra comunidad sufren de asma, y los químicos emitidos por los productos de limpieza en las escuelas tan solo incrementan las probabilidades de un ataque o de desarrollar asma en un futuro.

- Un estudio reciente del Journal of Occupational and Environmental Medicine encontró que el 12 por ciento de los casos de asma en el trabajo se deben al uso de productos de limpieza.

- Según estudios del Instituto Nacional para la Seguridad y Salud Ocupacional (NIOSH por sus siglas en inglés), los maestros y el personal de limpieza tienen los índices de asma más altos de la población laboral.

Les insto que reduzcan y regulen fuertemente los químicos tóxicos en los productos del consumidor. Al hacer esto, California establecerá un antecedente importante en la protección de la salud de las familias y los trabajadores— no sólo en nuestro estado, sino en la nación.

Gracias.

Sincerely,

Elena Rodriguez-Gutierrez
