

Form Letter 1 for Comment 41 for Proposed Low Carbon Fuel Standard Amendments (lcfs2024) - .

First Name: Candace

Last Name: Reed

Email Address: comobutterfly@gmail.com

Affiliation:

Subject: NO to the low carbon amendment

Comment:

This would:

Incentivize more corporate factory farms, harming family farmers, rural communities, and our environment.

Create more corporate consolidation in the U.S. livestock industry.

Commoditize methane production, which would fuel more methane producing practices.

Create additional overproduction of commodities, pork and milk, increasing supply and further pushing down market prices paid to independent family farms.

Pay foreign multinational meatpackers, like Chinese-owned Smithfield and Brazilian-owned JBS, for their pollution.

Create incentives for the public (taxpayer dollars through government subsidies) to fund anaerobic digesters to capture factory farm gas.

Subject: Do not include CAFO gas in California's Low Carbon Fuel Standard

Comment:

Including factory farm gas in California's Low Carbon Fuel Standard would:

- Incentivize more corporate factory farms, harming family farmers, rural communities, and our environment.
- Create more corporate consolidation in the U.S. livestock industry.
- Commoditize methane production, which would fuel more methane producing practices.
- Create additional overproduction of commodities, pork and milk, increasing supply and further pushing down market prices paid to independent family farms.
- Pay foreign multinational meatpackers, like Chinese-owned Smithfield and Brazilian-owned JBS, for their pollution.
- Create incentives for the public (taxpayer dollars through government subsidies) to fund anaerobic digesters to capture factory farm gas.

Again, this is a bad idea for humans, other-than-human animals, and the planet!

Subject: Against CARB's from incentivizing more Factory Farms which hurt MO Family Farmers

Comment:

I am against this because it:

Incentivize more corporate factory farms, harming family farmers, rural communities, and our environment.

Create more corporate consolidation in the U.S. livestock industry.

Commoditize methane production, which would fuel more methane producing practices.

Create additional overproduction of commodities, pork and milk, increasing supply and further pushing down market prices paid to independent family farms.

Pay foreign multinational meatpackers, like Chinese-owned Smithfield and Brazilian-owned JBS, for their pollution.

Create incentives for the public (taxpayer dollars through government subsidies) to fund anaerobic digesters to capture factory farm gas.

This is a BAD idea as it hurts MO independent family farmers. Do NOT pass this amendment!

Thank you.
St. Louis, MO

Subject: Stop Fueling More Factory Farms in the Midwest

Comment:

Please stop factory farm gas in California's Low Carbon Fuel Standard that would:

1. Incentivize more corporate factory farms, harming family farmers, rural communities, and our environment.
2. Create more corporate consolidation in the U.S. livestock industry.
3. Commoditize methane production, which would fuel more methane producing practices.
4. Create additional overproduction of commodities, pork and milk, increasing supply and further pushing down market prices paid to independent family farms.
5. Pay foreign multinational meatpackers, like Chinese-owned Smithfield and Brazilian-owned JBS, for their pollution.
6. Create incentives for the public (taxpayer dollars through government subsidies) to fund anaerobic digesters to capture factory farm gas.

As a farm family living in the Midwest, we don't need more factory farms or their biproducts. Family farms are what has helped make this country great--individuals who love and care for the land and animals and our environment. We don't need more corporate farms that pollute our water and air and land.

Subject: Do NOT include factory farm gas in the Cal Low Carbon Fuel Standard

Comment:

Including factory farm gas in California's Low Carbon Fuel Standard would:

- *Incentivize more corporate factory farms, harming family farmers, rural communities, and our environment.

- *Create more corporate consolidation in the U.S. livestock industry.

- *Commoditize methane production, which would fuel more methane producing practices.

- *Create additional overproduction of commodities, pork and milk, increasing supply and further pushing down market prices paid to independent family farms.

- *Pay foreign multinational meatpackers, like Chinese-owned Smithfield and Brazilian-owned JBS, for their pollution.

- *Create incentives for the public (taxpayer dollars through government subsidies) to fund anaerobic digesters to capture factory farm gas.

I ask that factory farm gas not be eligible for inclusion in the Low Carbon Fuel Standard.

Thank you.

Subject: CARB drawbacks

Comment:

PLEASE reevaluate CARB's approach to lower carbon output. Things we don't like about CARB:

Incentivize more corporate factory farms, harming family farmers, rural communities, and our environment.

Create more corporate consolidation in the U.S. livestock industry.

Commoditize methane production, which would fuel more methane producing practices.

Create additional overproduction of commodities, pork and milk, increasing supply and further pushing down market prices paid to independent family farms.

Pay foreign multinational meatpackers, like Chinese-owned Smithfield and Brazilian-owned JBS, for their pollution.

Create incentives for the public (taxpayer dollars through government subsidies) to fund anaerobic digesters to capture factory farm gas.

We could go on and on about how this is a BAD idea, but we will leave it at that.
