Subject: Global Warming Solutions Act
Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Sharon Donovan
Tiburon, CA

Dear CARB Board members: Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act. I have a few requests that I believe will make this plan even stronger.

I hope you will consider them during your meeting. -

Please AUCTION OFF ALL EMISSION ALLOWANCES. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills. -

Please work to REDUCE the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

Please INCREASE the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

Please REQUIRE businesses TO RECYCLE their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced.

Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: REDUCED air pollution, MORE clean-energy jobs, LESS waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
 - Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
 - Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
 - Please require businesses to recycle their materials.
- We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Our own governor is holding an international summit November 18 and 19 to address global warming and climate change issues with world leaders and organizations. We should lead by example and walk the talk to our maximum ability and authority.

Thanks again for your work on behalf of clean air for California.

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I agree with the requests proposed by the Sierra Club that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce or eliminate the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles traveled.
- Businesses should be REQUIRED recycle their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Comment:

Dear CARB Board members:

I believe that the plan to reduce greenhouse gas emissions can be made even stronger. I hope you will consider them during your meeting.

Auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

Work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

Increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

Require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks you for your work on behalf of clean air for California.

Subject: Strengthen the Global Warming Solutions Act
Comment:

The proposal leaves open the chance the state will give away these emission allowances for free, even though the pollution they allow can hurt Californians.

Further, the proposed plan would allow polluters to meet half of these emissions caps by buying "offsets" - essentially buying their way out of complying with state law by paying others to reduce their global warming pollution. This could not only worsen air pollution in our most polluted communities, but would discourage development of clean energy technologies in California.

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.
- I would also like to add my agreement with the Sierra Club's position on the role of forests and carbon sequestration and I support maintaining healthy, sustainable forest practices which do not involve massive industrial clearcutting.

"Forests can play an important role in global warming, since approximately half the weight of a tree is carbon. Growing larger, older trees is helpful because they capture and store more carbon. Conversely, converting forests to other uses, through sprawl and development, eliminates carbon storage opportunities now and into the future, and should be discouraged. Although forests will have a role in addressing global warming because they store carbon, we always need to remember that forests have many values besides carbon, and need to be managed to be healthy, natural systems.

Though there is much talk about "trading carbon allowances", the Sierra Club opposes trading between sources of carbon pollution and

sinks, like forests, which store carbon. The ability of forests to store carbon should not become a justification for maintaining higher emissions of air pollution."

Thanks again for your work on behalf of clean air for California.

Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act. As a life-long California resident and also a life-long citizen of this planet, I am very concerned about global warming as I watch more and more symptoms appear almost daily.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

Subject: Global Warming Solutions Act

Comment:

Dear CARB Board members:

On 11/13/2008, the Los Angeles Times ran an excellent article titled "Pollution saps state's economy, study says", California section, pg 3. A specific paragraph/quote and the Sierra Club motivated me to email you today:

"Mary Nichols, chairman of the Air Resource Board, said the findings will 'be useful to all of us. Our board members hear on a regular basis from constituents who are concerned about the costs of regulations, and seldom hear from people concerned about the costs of regulations, and seldom hear from people concerned about their health because they are collectively and individually not as well organized.'"

Therefore, I thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting:

1. Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

2. Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

3. Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

4. Please require businesses to recycle their materials. For the past 8 years, I have worked as an executive in scrap metal and electronics recycling industry. Recycling is a best business practice that reduces operating costs associated with their waste stream, benefits the environment, creates California jobs and is socially responsible by promoting sustainability.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies

will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities. I am happy to testify in person not only from business/industry executive perspective but also from my personal viewpoint that the pending CARB plans with a few additional suggestions are necessary and practical solutions to the current air quality issues.

Thanks again for your work on behalf of clean air for California,

Dale Leuer

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Please Use AB 32 To Create Jobs In California

Comment:

Dear CARB,

Thank you for your ongoing work to implement California's landmark global warming law, AB 32.

As you know, California is being hard hit by the current economic crisis. Californians around the state are losing their jobs, their homes and the benefits of many state services. I strongly believe that the implementation of AB 32 provides us with a unique opportunity to not only preserve our planet for future generations, but put us on the path to long-term economic stability & prosperity. Vigorous implementation of AB 32 can provide thousands of green jobs, and establish California as a leader in renewable energy around the world.

In order to be sure we take full advantage of this opportunity, I request that CARB adopt a Scoping Plan that will create jobs:

First, please auction off all emission credits. Program revenues can go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their energy bills.

And please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology and jobs in California.

To the extent offsets are used, there should be stringent protocols in place ensuring that the reductions are quantifiable, new, permanent, subject to independent third-party verification, enforceable by CARB, and only located in California. Also, offsets from sinks, such as planting trees or avoiding tree cut-downs, should not be allowed at all, since they are too difficult to measure and often under-perform.

In order to generate robust demand for green energy, I ask that the Scoping plan also include the following policies:

f{ Ensure cap-and-trade is just a minor tool among market mechanisms. Other tools should be brought forward more robustly, including feed-in tariffs and carbon fees in the Plan's near-term action agenda.

f{ Make sure the 33-percent renewable electricity standard by 2020

is given the force of law, either through legislation or regulatory action.

f{ Promote and enable Community Choice Electricity Aggregation (CCA) and its potentially powerful GHG reduction potential for cities and counties.

f{ Give more specificity and amplitude to the goal of electrifying transportation, especially greatly expanding ZEV numbers (plug-ins and electric cars) beyond CARB's current low-level projections.

f{ Greatly strengthen the too-modest land use and agricultural sections of Plan. The Plan greatly underestimates the significance of methane emissions, by using the 100-year global warming potential. Over a shorter time horizon, methane accounts for 17% to perhaps well over 30% of the state's GHGs, rather than the 5.7% in the 2004 inventory.

f{ Further increase requirements for zero waste and recycling, as well as Extended Producer Responsibility.

I appreciate the opportunity to provide these comments, and I thank you in advance for your time and consideration.

D. McPhall

Subject: Reducing emissions
Comment:

Dear CARB Board members:

Thank you for your work so far toward a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

I urge you to auction off all emission allowances. Program revenues should go toward greenhouse and pollution reduction programs, such as clean technologies and green jobs.

Reduce the role of offsets in the Plan. Offsets encourage emissions in low-income neighborhoods and in defenseless habitats, and weaken the demand for clean energy technology. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled. Please require businesses to recycle their materials.

Do you remember Donora Pennsylvania, when air pollution smothered people in their homes? We are creeping toward similar crises in California. Now we have a chance to realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: We Need an Aggressive AB 32 Plan

Comment:

Re. The Global Warming Solutions Act

Dear Members of the CARB Board,

To make the plan more effective I would like to a few requests.
Please consider them when you meet:

- Be tough on auto emissions by continuing to fight for and implement very high fuel efficiency standards for all vehicles - especially trucks.
- Require businesses to recycle their materials. Let's make California even better as we address one of the worst crises our planet has ever faced. Very strong and effective CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.
- Auction off ALL emission allowances; here should be no giveaways. Program revenues should go toward green house gas reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills
- Increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles traveled.
- Reduce the role of offsets in the Plan to an absolute minimum. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

Your hard work so far envisioning a plan to implement the Global Warming Solutions Act is sincerely appreciated. And thank you again for your work on behalf of clean air for California.

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Strengthen the Global Warming Solutions Act

Comment:

Dear CARB Board members:

Please make your plan to implement the Global Warming Solutions Act stronger. The following suggestions would make the success of the Act more certain.

Auction off all emission allowances. Program revenues would best go to green house gas reduction projects like clean technologies, green jobs, and help in reducing utility bills for low-income consumers and small businesses.

Reduce the role of offsets in the Plan. They encourage continuing emissions in less affluent areas and in habitats that have no protectors, and weaken the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, and stimulate the state's economy.

Increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle use.

Require businesses to recycle their materials.

Thanks for you work so far. With your continued effort and vigilance I look forward to a California leading the world in the reduction of green house gases with thriving green energy jobs and clean air.

Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

- Please require businesses to recycle their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: AB 32 - Scoping Plan to Reduce Greenhouse Gas Emissions in California
Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
 - Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
 - Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
 - Please require businesses to recycle their materials.
- We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Dear CARB Board members:

Thank you for your hard work so far working on a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy. A win-win solution!
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up the number of vehicle miles traveled.
- Please require businesses to recycle their materials. We can do so much better in the area of recycling, and it doesn't take that much effort. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Clean Air
Comment:

Dear CARB Board members:

What follows below is copied from a message created by the Sierra Club and I agree with it. However, I see it very simply as protecting the future for our children and their children. Allowing pollution to continue in any form where it could be prevented is not the way to go. No offset programs! No short cuts! No to ignoring the problem!

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

We also need far more rail transportation and far less truck, bus and auto transportation. Please do all in your power to end our dependence on foreign oil.

Thanks again for your work on behalf of clean air for California. Nothing is more important to our state's future and to the future of our progeny than cleaner air throughout ALL of our wonderful state. Blessings to you and all of yours!

Best regards,
Frank H. Baumgardner, III

Thank you for envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Please... NO emission allowances for free!
Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

It's THIS simple, actually. Unless we start to truly protect our planet's environment, natural habitats, resources, embrace sustainable living and renewable energies worldwide we threaten our very own survival!! The solutions are all out there - we only need to apply them! And that takes EVERYBODY, individual citizens, governments as well as corporations.

Thanks again for your work on behalf of clean air for California.

Sincerely,

John Hope
San Francisco

Comment:

On November 20, CARB will consider the elements of this plan, and YOU can still tell them how to make the plan better until noon Nov. 19. As written, the plan calls for more than one-fifth of the reductions to come from a "cap-and-trade" system that will let polluters trade permits for putting out greenhouse gases. The proposal leaves open the chance the state will give away these emission allowances for free, even though the pollution they allow can hurt Californians. Further, the proposed plan would allow polluters to meet half of these emissions caps by buying "offsets" - essentially buying their way out of complying with state law by paying others to reduce their global warming pollution. This could not only worsen air pollution in our most polluted communities, but would discourage development of clean energy technologies in California.

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act. I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting. - Please auction off all emission allowances. Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

It is important to make this plan sensible and to maximize the reduction of greenhouse gasses and minimize pollution.

- Please consider the benefits of tree planting in cities and the connection between trees, water, energy savings, air quality and GHG reduction via integrated urban ecosystem management (see treepeople.org)

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Subject: AB 32 Scoping Plan to Reduce Greenhouse Gas Emissions in Ca
Comment:

Dear CARB Board members:

Thanks for your work on the plan to implement the Global Warming Solutions Act. Time is of the essence, and the plan needs to be stronger. Please consider these suggestions.

- Educate and provide incentives for people to stop eating meat, especially red meat, and most especially beef. Raising livestock is a huge contributor to greenhouse gasses, not only because of the methane but also because rain forests are felled to provide grazing land. Becoming vegetarian, or at least forgoing beef, is 2nd only to not driving as to what individuals can do that is most effective in reducing greenhouse gasses.

- Eliminate offsets in the Plan. They are too easily subject to corruption. Providing offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Eliminating offsets will create more clean-energy jobs, stimulating our state's economy.

- Auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

- Increase targets for local governments to reduce emissions.

- Require businesses to recycle their materials and require manufacturers to use minimal packaging and-whenever possible-to use recyclable packaging that is made from recycled materials.

The consequences of "too little too late" are dire. We must take strong action to address the worst crisis our species has ever faced.

Thanks again for your work on behalf of clean air for California.

Subject: additional info re Global Warming Solutions Act comment
Comment:

Dear CARB Board members:

Below, I am submitting additional info regarding the most egregious omission in the Plan to implement the Global Warming Solutions Act, which involves livestock. Thanks for your work on the plan. Time is of the essence, and the plan needs to be stronger. Please consider these suggestions.

- Educate and provide incentives for people to stop eating meat, especially red meat, and most especially beef. Raising livestock is a huge contributor to greenhouse gases, not only because of the methane but also because rain forests are felled to provide grazing land. Becoming vegetarian, or eating less red meat, is as effective as not driving, or driving less. (* Please read statistics below.)
- Eliminate offsets in the Plan. They are too easily subject to loopholes or corruption. Also, providing offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Eliminating offsets will create more clean-energy jobs, stimulating our state's economy.
- Auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Increase targets for local governments to reduce emissions.
- Require businesses to recycle their materials and require manufacturers to use minimal packaging and-whenever possible-to use recyclable packaging that is made from recycled materials.

The consequences of doing "too little too late" are dire for our economy and for our physical well-being. California must lead with stronger action to address the worst crisis our species has ever faced.

Thanks again for your work on behalf California and the planet.

* According to a report published by the United Nations Food and Agriculture Organization, the livestock sector generates more greenhouse gas emissions as measured in CO2 equivalent - than transport. It is also a major source of land and water degradation. When emissions from land use and land use change are included, the livestock sector accounts for 9% of CO2 deriving from human-related activities, but produces a much larger share of even more harmful greenhouse gases. It generates 65% of human-related nitrous oxide, which has 296 times the Global Warming Potential (GWP) of CO2. And it accounts for respectively 37% of all human-induced methane (23 times as warming as CO2), and 64% of ammonia. Livestock now uses 30% of the earth's entire land surface, mostly permanent pasture but also including 33% of the global arable land used to producing feed for livestock, per the UN report. As forests are cleared to create new pastures, it is a major driver of deforestation, especially in Latin America where some 70% of former forests in the Amazon have been turned over to grazing. Livestock production also impacts heavily the world's water supply, accounting for more than 8% of global human water use, mainly for the irrigation of feed crops. Evidence suggests it is the largest sectoral source of water pollutants, principally animal wastes, antibiotics, hormones, chemicals from tanneries, fertilizers and pesticides used for feed crops, and sediments from eroded pastures. In the US, livestock and feed crop agriculture are responsible for approximately 37% of pesticide use, 50% of antibiotic use, and a third of the nitrogen and phosphorus loads in freshwater resources.

Many are concerned that raising biofuel crops will increase world hunger. The USDA and the United Nations state that using an acre of land to raise cattle yields 20 pounds of usable protein when that acre could yield 356 pounds of soybean protein. Population biologists Paul and Anne Ehrlich note that a pound of wheat can be grown with 60 gallons of water, whereas a pound of meat requires 2,500 to 6,000 gallons. A ten-acre farm can support 60 people growing soybeans, 24 people growing wheat, 10 people growing corn and only 2 people producing cattle. Reducing meat production by 10% in the U.S. would free enough grain to feed 60 million people, estimates Harvard nutritionist Jean Mayer. For the air, the planet, and for our fellow humans, please encourage Californians to become vegetarian or at least to eat less meat.

Subject: Global Warming Solutions Act
Comment:

Dear CARB Board members: Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act. I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled. -

Please require businesses to recycle their materials.

Global warming is the most urgent environmental problem we have ever faced, and it is at the top of my personal activist agenda. It should also be the top one for California. Our state can lead not just the nation but the world in addressing it. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

Dear CARB Board members:

Thank you for your plan to implement the Global Warming Solutions Act.

Below are some suggestions to make this plan even stronger. I hope you will consider them.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
 - Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
 - Please increase the goals for local governments to reduce emissions caused by poor growth that increases vehicle miles travelled.
 - Please require businesses recycle their materials.
- We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Through your efforts under AB32, Calif is setting the model for the nation and even the world on the criticality, pace and methods for reducing green house gases. We have no time to lose and must reduce GHG dramatically and quickly to mitigate potentially catastrophic impacts on our climate and economy. If we are too timid we will fail. By 100% auction and no or minimal offsets along with everything else you're proposing, we can be succesful.

Thanks again for your incredible and crucial work on behalf of clean air for California.

Subject: Reducing Greenhouse Gas Emissions
Comment:

Dear CARB Board members:

Thank you for your work on a plan to implement the Global Warming Solutions Act.

I have some requests that I hope will make your plan stronger. Please consider them during your meeting.

- Please auction off all emission allowances, without exceptions. Program revenues should then go toward organized greenhouse gas reduction programs such as clean technologies, and aid for low-income consumers and small businesses to reduce their utility bills.

- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled. We need to work near where we live, at least in new developments.

- Please require businesses to recycle any of their materials that can be.

We have a chance to make California better as we address one of the worst crises our civilization has ever faced. Strong CARB policies will help our state's residents realize some of the benefits from reduced air pollution, more clean-energy jobs, less unnecessary waste, and overall healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Final AB 32 Scoping Plan
Comment:

Dear CARB,

You hold the serious responsibility for leading the United States, which should then lead the world, on how to reduce greenhouse gases. So all Americans, indeed, all people, are counting on you to do the right thing.

Please consider these recommendations for inclusion in the Final AB32 Scoping Plan:

- The State should auction 100% of permits under the cap. Polluters should pay for their emissions, not be given free permits that subsidize coal and prolong the transition to cleaner energy.
- The Scoping Plan should specify that all auction revenues will be used to provide a Dividend to compensate consumers. Given the state of the economy, helping consumers deal with fuel and electricity costs is the best use of auction revenues.
- I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

Sincerely,

Terri Pauls
Anchorage, Alaska

Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Strict AB32 Scoping Plan
Comment:

Dear CARB,

It is so important that we take this momentous opportunity and truly put forward a plan that is going to make a difference.

I would ask you to please consider these recommendations for inclusion in the Final AB32 Scoping Plan:

- The State should auction 100% of permits under the cap. Polluters should pay for their emissions, not be given free permits that subsidize coal and prolong the transition to cleaner energy.
- The Scoping Plan should specify that all auction revenues will be used to provide a Dividend to compensate consumers. Given the state of the economy, helping consumers deal with fuel and electricity costs is the best use of auction revenues.
- I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

This is going to be hard on everyone. Our children are depending on us to do what is right, not what is easy.

Sincerely,

Kristin Thigpen

Subject: Recommendations For AB32
Comment:

Dear CARB Board members:

Thank you for the diligent work in preparing a plan to implement the Global Warming Solutions Act - AB 32.

I am presenting few proposals that I believe will assist in formulating a stonger plan that is to be created. I request, for your consideration, the following during your deliberations.

- Recomend that all emission allowances be auctioned off. Program revenues should then be used toward GHG reduction programs, such as clean technologies, green jobs, aid for low-income consumers, and support small businesses to reduce their utility bills.
- Work to minimize the role of offsets in the Plan. Providing too many offsets encourages continuing emissions within low-income neighborhoods, affect defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs and stimulate our state's economy.
- Increase the targets for local governments to reduce emissions related to poorly planned growth, thus causing drivers to live further from their work, requiring exessive vehicle miles travelled.
- Require businesses to establish a system that will allow the recycling of their waste and excess materials.

We have a chance to make California more clean and provide a healthier environment for it's citizens. It is urgent that we address one of the worst crises our planet now faces. Strong CARB policies will help our state's residents realize their responsibilities by taking on global warming conditons and noting the following benefits: reduced air pollution we breathe; the creation of more clean-energy jobs; reduces the waste produced by our citizens: and enhance healthier communities for all Californians.

Thanks, again, for allowing me to propose what has been presented for your consideration and to the work the Board Members are doing on behalf of Californians for a cleaner California.

Sincerely,
John F. Delgado

Subject: SCOPINGPLN08

Comment:

Dear CARB Board members:

Thank you for working to envision a plan to implement the Global Warming Solutions Act. I hope you will consider the following carefully during your meeting about this plan.

1) Please auction off all emission allowances. Program revenues should go towards GHG reduction programs, clean technologies, green jobs, and aid for low-income consumers and/or small businesses to reduce their utility bills. Any cap and trade programs should auction all pollution allowances, with revenues used for public benefits, like developing clean energy technology.

2) Please work to reduce the role of offsets in the Plan. Providing many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

3) Please call for more use (than 7500) Zero Emission Vehicles (ZEVs) vehicles by 2014. Since this technology is already available increase this number to hundreds of thousands by 2014.

3) Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled. CARB regulations should utilize "Community Choice," which lets cities and counties pool the buying power of all local electric customers and increase ratio of renewable energy they utilize. For example, Marin County and San Francisco have Community Choice plans requiring 51% renewable energy sources, far more than the current utility average of 12%. Could you follow this in your plan?

4) Please require businesses to recycle their materials. Incentives and fines for not complying to recycling regulations are necessary to get businesses to recycle. These are needed.

We have a chance to make California even better as we address this global warming crises. Strong CARB policies will help our state's residents realize their need for change. This can then reduce air pollution, provide more clean-energy jobs, produce less waste and create healthier communities. Take strong action now.

Thanks you,
J.A. Swanick

Subject: Trducing Greenhouse Gases
Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

- Please require businesses to recycle their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Comment:

Dear CARB,

Please consider these recommendations for inclusion in the Final AB32 Scoping Plan:

- The State should auction 100% of permits under the cap. Polluters should pay for their emissions, not be given free permits that subsidize coal and prolong the transition to cleaner energy.
- The Scoping Plan should specify that all auction revenues will be used to provide a Dividend to compensate consumers. Given the state of the economy, helping consumers deal with fuel and electricity costs is the best use of auction revenues.
- I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

Sincerely,

Subject: Ways to Strengthen CARB's AB 32 Scoping Plan
Comment:

Dear CARB Board members

I am Co-Chair, Energy-Climate Committee, Sierra Club California.:

CARB's Scoping Plan is moving in the right direction but certain remaining shortcomings need fixing. Please address them during your November 20 meeting.

- Auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

- Work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

- Increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

- Please require businesses to recycle their materials. We've got to face up to one of the worst crises our society has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Comment:

Dear Board,

I have 43 solar panels, a hybrid car, all compact fluorescents in my house, etc. I strongly support efforts by California to take the lead in controlling CO2 emissions. Therefore I endorse the following recommendations from the Sierra Club concerning approval of AB32.

1. Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
2. Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
3. Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
4. Please require businesses to recycle their materials.

Sincerely,

Comment:

Dear CARB Board members:

I so appreciate your efforts to find a solution to the most pressing issue of our time...climate change. However, I would implore you to implement the type of program that would result in the most actual reduction in GHG emissions. Truly, I believe a carbon tax would be much more effective than a Cap-and-Trade program since a Cap-and-Trade program allows for companies to continue to pollute here, even if they are buying clean energy offsets elsewhere. But, if you insist on putting a Cap-and-trade program in place, I would ask that you do it in the most responsible way. Here are some key things I hope you will consider:

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles traveled.
- Please require businesses to recycle their materials.

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: AB 32 Scoping Plan input
Comment:

Dear Board members of CARB:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

Please, do not auction off any emission allowances. Program revenues should go toward other programs, such as clean technologies, green jobs, and "NO ZERO NADA" aid for low-income consumers and small businesses to reduce their utility bills.

Please work to eliminate the role of offsets in the Plan. Providing any offsets encourages continuing emissions and weakens the demand for clean energy technology innovation. All offsets do is allow polluters to buy their way out of reducing emissions and then create another way for wall street to wring more blood from the consumer. Eliminating offsets may create more clean-energy jobs and stimulating our state's economy.

Why don't you create an offset program where motorists can buy offset credits for their gross polluter cars? Let's be fair here, if you want to do it for business, than don't discriminate against your citizens.

If you don't want to do it for autos, Why do you want to do it for others?

What's the difference?

Please mandate an increase in the targets for local governments to reduce emissions caused by any and all poorly planned growth that increases more residents to move into the state, drives up vehicle miles traveled including support vehicles, increases infrastructure pollution

Please require businesses to recycle their materials, starting with ALL state

agencies first. We have a chance to make California even better as we address one of the worst crises our planet has ever faced, a population explosion out of control. Weak CARB policies will help our state's residents realize some of the benefits we will receive by taking on reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Cap and Dividend solution
Comment:

Dear CARB,

Please consider these recommendations for inclusion in the Final AB32 Scoping Plan:

- The State should absolutely auction 100% of permits under the cap. Polluters should pay for their emissions, NOT be given free permits that subsidize coal and prolong the transition to cleaner energy.
- The Scoping Plan should specify that all auction revenues will be used to provide a Dividend to compensate consumers. Given the state of the economy, helping consumers deal with fuel and electricity costs is the best use of auction revenues. I highly recommend reading Peter Barnes' Cap and Dividend solutions in his book "Capitalism 3.0": <http://capitalism3.com/>
- I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

Subject: Global Warming Solutions Act implementation
Comment:

Dear CARB Board members:

Thank you for your hard work so far in envisioning how to implement the Global Warming Solutions Act.

Please consider the following suggestions to make this plan even stronger:

- Auction all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Require businesses to recycle their materials.

Strong CARB policies will help our state's residents realize some of the benefits we will receive by working to reduce pollution that speeds global warming: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Global Warming Solutions Act
Comment:

Dear CARB Board members:

The Global Warming Solutions Act is a very promising forward step to combat Global Warming.

I hope you will consider a few changes.

All emission allowances should be auctioned off. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

The role of offsets in the Plan must be reduced or eliminated. It is not fair that the wealthy should be allowed to buy a right to pollute our low income neighborhoods and habitat areas. Offsets have the potential to stifle clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

The targets for local governments to reduce emissions must be increased. They have to be stopped in their foolish approval of poorly planned growth. There is nothing smart about high density development when there is no reliable, cheap, dependable transit that goes directly to where the people living in the development need to go. What is happening now is cities keep adding people who have multiple cars, which they use for multiple trips every day.

Please require businesses, government offices and residents to recycle their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Comment:

Dear CARB Board members:
Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act. I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting. - Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills. - Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities. Thanks again for your work on behalf of clean air for California.

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean-energy technology's innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, lessening of waste, and healthier communities.

Thanks again for your work.

Subject: Global Warming Solutions Act
Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I believe that the following policies will make this plan even stronger. I hope you will consider them during your meeting.

1) Please AUCTION OFF ALL EMISSIONS ALLOWANCES. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

2) Please work to REDUCE THE ROLE OF OFFSETS in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

3) Please INCREASE THE TARGETS FOR LOCAL GOVERNMENTS to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

4) Please REQUIRE BUSINESSES TO RECYCLE their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: AB32 Scoping Plan comments
Comment:

Hello CARB folks,

Please consider these recommendations for inclusion in the Final AB32 Scoping Plan:

- I believe that CA should auction 100% of permits under the cap. Polluters should pay for their emissions, not be given free permits that subsidize coal and prolong the transition to cleaner energy.
- The Scoping Plan should specify that all auction revenues will be used to subsidize consumers, either reducing their costs for energy, or assisting them in acquiring new technology that will lower their own GHG emissions.
- I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.
- I believe CARB needs to look at the way that fossil fuel companies dominate the market for energy, and how the State of CA can encourage alternative energy companies.

Sincerely,
/s/ Charles Cresson Wood

Subject: Climate change solutions
Comment:

Dear CARB Board members:

As you well know, we cannot afford to go part way in averting global climate catastrophe. I appreciate your work so far on creating a plan to implement the Global Warming Solutions Act.

I believe that this plan needs to be stronger. Please consider the following revisions:

- Auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Require businesses to recycle their materials. In short order this will save money as well as resources while creating jobs.

This is our last chance to save the planet as we know it and we can help California's budget crisis at the same time. Strong CARB policies will reduce air pollution, increase clean-energy jobs, and make for less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Comments on Global Warming Solutions Act Plan

Comment:

The work undertaken and accomplished to date to implement the Global Warming Solutions Act is very much appreciated. Please consider the following suggestions in implementing the Plan:

(1) Emphasize and educate the public on the contribution to the problem created by local governments by approving poorly planned growth or sprawl that increases vehicle travel.

(2) Reduce the role of offsets. Allowing polluters to buy their way out of complying with state law by paying others to reduce THEIR global warming pollution may worsen air pollution and discourage advancement of clean energy technologies in California.

(3) Auction off all emission allowances and use the funds for GHG reduction programs such as clean technologies and green jobs. If the plan allows for more than one-fifth of the reductions to come from a "cap-and-trade" system, then polluters will trade permits for producing GHG emissions. California cannot afford to allow any "free" emissions.

(4) Require businesses to fully recycle their materials.

Rigorous and enforceable CARB policies now will help citizens realize the critical nature of the crises as well as the benefits in reducing air pollutions and creating clean-energy employment.

Thank you for any and all efforts to create clean air for life in California.

Subject: Global Warming Solutions Act
Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

- Please require businesses to recycle their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Seren Helm

Form Letter 263 for Comment 50 for AB 32 Scoping Plan (scopingpln08) - .

First Name: Chris
Last Name: Cone
Email Address: cone@sonic.net
Affiliation:

Subject: Comments on AB32 Scoping Plan
Comment:

I urge the California Air Resources Board to consider the following recommendations for inclusion in the Final AB32 Scoping Plan:

AUCTION PERCENTAGE

I urge the State to auction 100 percent of permits under the cap. It is important that polluters pay for their emissions, not be given free permits that subsidize coal and prolong the transition to cleaner energy. This criterion is at the heart of making a successful transition to a clean energy system.

DIVIDEND SYSTEM

The Scoping Plan should specify that all auction revenues will be used to provide a Dividend to compensate consumers. The current state of the economy makes it vitally important to help consumers deal with fuel and electricity costs and providing dividends will act as an economic stimulus at a time when we need it most.

CARBON FEES

I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

Sincerely,
Chris Cone

Subject: AB32 - scoping plan criteria
Comment:

Dear CARB,

California can continue to lead the United States toward sound and effective climate policy. Your inclusion of the following recommendations in the Final AB32 Scoping Plan will help every state, and our nation as a whole, solve the climate crisis.

- 1) The State should auction 100% of permits under the cap. Polluters must pay for their emissions. Polluters must not be given free permits that subsidize coal and prolong the transition to cleaner energy. This ensures a level playing field for true market economics to drive the transition.
- 2) The Scoping Plan should specify that all auction revenues will be used to provide a Dividend to compensate consumers. Given the state of the economy, helping consumers deal with fuel and electricity costs is the best use of auction revenues.
- 3) I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

Thank you for your work, and for your leadership, on our number one problem/solution opportunity.

Best Regards,
Tom Danaher

Comment:

Dear CARB Board Members:

Thank you for your hard work to solve our global warming problem.

I hope you will consider the following recommendations:

1. Please make sure emission allowances are auctioned and revenues go toward GHG reduction programs, such as clean technology.
2. Please reduce the role of offsets in the plan. Offsets are likely to harm low income neighborhoods and natural habitats.
3. Please reduce poorly planned growth that drives up vehicle miles travelled.
4. Please require that businesses recycle their materials.

Again, thank you for your consideration of public input.

Comment:

Dear CARB Board,

I am writing in regards to your plan to implement the Global Warming Solutions Act. I believe this plan is important and comes at a critical time. It should be the strongest plan possible given the I have the following comments on the plan:

1. Please do not give away emission allowances. They should be auctioned since they will have a future value. Polluters should not be able to profit from free emission allowances.
2. Please de-prioritize offsets, which push emissions disproportionately into low income areas and discourage the adoption of clean technology
3. Please increase the targets for local governments to reduce emissions caused by poorly planned growth that increase vehicle travel
4. Please require businesses to recycle their materials.

Dear CARB,

Thank you VERY MUCH for working on plans to save our environment and planet. We really need to make significant changes. I support your proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

Please consider the following recommendations for inclusion in the Final AB32 Scoping Plan:

- 1) Auction 100% of permits under the cap. Polluters should pay for their emissions, not be given free permits that subsidize coal and prolong the transition to cleaner energy.
- 2) Auction revenues be used to provide a dividend to compensate consumers. Given the state of the economy, helping consumers deal with fuel and electricity costs is the best use of auction revenues.

Sincerely,
Ai-Chu Wu

Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

- Please require businesses to recycle their materials.

AS a psychologist, who works with children and families, I believe our government has a duty toward perserving the environment. WE have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Sincerely,
Mei-I Chang, Psy.D.

Dear CARB members,
As a PhD economist, I would like to ensure that the following recommendations are included in the final plan. Specifically, please include auctioning the permits to ensure a market (free market) based valuation of the externalities of pollution. Consider these recommendations for inclusion in the Final AB32 Scoping Plan:

- The State should auction 100% of permits under the cap. Polluters should pay for their emissions, not be given free permits that subsidize coal and prolong the transition to cleaner energy.
- The Scoping Plan should specify that auction revenues will be used to provide a Dividend to compensate consumers. Given the state of the economy, helping consumers deal with fuel and electricity costs is a vital use of auction revenues.
- I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

Subject: Reduce Greenhouse Gas Emissions in California

Comment:

Please auction off all emission credits. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their energy bills. And please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology and jobs in California .

- Big polluters should pay for all their emissions: 100% auction of emissions permits, no free giveaways.

- Consider cap-and-trade just a minor tool among market mechanisms. Other tools should be brought forward more robustly, including feed-in tariffs and carbon fees in the Plan's near-term action agenda.

- Make sure the 33-percent renewable electricity standard by 2020 is given the force of law, either through legislation or regulatory action.

- Promote and enable Community Choice Electricity Aggregation (CCA) and its potentially powerful GHG reduction potential for cities and counties.

- Give more specificity and amplitude to the goal of electrifying transportation, especially greatly expanding ZEV numbers (plug-ins and electric cars) beyond CARB's currently too low projected levels.

- Greatly strengthen the too-modest land use and agricultural sections of Plan. The Plan greatly underestimates the significance of methane emissions, by using the 100-year global warming potential. Over a shorter time horizon, methane accounts for 17% to perhaps well over 30% of the state's GHGs, rather than the 5.7% in the 2004 inventory.

- Further increase requirements for zero waste and recycling, as well as Extended Producer Responsibility.

- Ensure that actions to reduce greenhouse gases also help,

whenever possible, to clean up California 's unhealthy air.

- Limiting offsets will strengthen the demand for clean energy innovation, which in turn provides more good jobs for Californians.
- Any offsets allowed should at most represent only a small portion of a polluter's required emission reductions. They should have stringent protocols ensuring that the reductions are quantifiable, new, permanent, subject to independent third-party verification, enforceable by CARB, and only located in California .
- Offsets from sinks, such as planting trees or avoiding tree cut-downs, should not be allowed, since they are too difficult to measure and often under-perform.

Subject: Global Warming Solutions Act

Comment:

Dear CARB Board members:

Please consider the following items for your plan to implement the Global Warming Solutions Act:

1. The role of offsets in the plan should be reduced. Providing too many offsets encourages continuing and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy
2. All emissions allowances should be auctioned off. Program revenues should go toward GHG reduction programs, such as clean technologies and green jobs.
3. Increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles traveled.

Thank You,
Hank Raymond

Subject: An even bolder Scoping Plan
Comment:

Dear CARB Board members:

Thank you for the work you are doing to implement the Global Warming Solutions Act.

I hope you might consider the following steps to strengthen the plan.

*** Please auction off all emission allowances. There should never have been a right to pollute the commons for free. Much good could be done with the proceeds from auctioning all allowances.

*** Please reduce the role of offsets. Allowing offsets instead of real emissions reductions, keeps low income neighborhoods at risk and weakens the demand for clean energy innovation. Limiting offsets will create more clean-energy jobs, and benefit our state's economy.

*** Please expect more of local governments. All local governments need to act boldly to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled. We need a level playing field created by strong requirements of all cities.

*** Please require businesses to recycle their materials. Recycling should be a cost of doing business for all businesses. All businesses should be on an equal footing.

I'm proud that my state is taking a leadership role in addressing the profound challenges of global warming. The boldest possible action is required by this planetary challenge. Bold action on global warming will also give our residents cleaner air, healthier communities, clean and green jobs, more efficient use of energy and materials, and a stronger economy.

Thanks again for your work on behalf current and future generations.

Comment:

Please auction off all emission credits. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their energy bills. And please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology and jobs in California.

- Big polluters should pay for all their emissions: 100% auction of emissions permits, no free giveaways.

- Consider cap-and-trade just a minor tool among market mechanisms. Other tools should be brought forward more robustly, including feed-in tariffs and carbon fees in the Plan's near-term action agenda.

- Make sure the 33-percent renewable electricity standard by 2020 is given the force of law, either through legislation or regulatory action.

- Promote and enable Community Choice Electricity Aggregation (CCA) and its potentially powerful GHG reduction potential for cities and counties.

- Give more specificity and amplitude to the goal of electrifying transportation, especially greatly expanding ZEV numbers (plug-ins and electric cars) beyond CARB's currently too low projected levels.

- Greatly strengthen the too-modest land use and agricultural sections of Plan. The Plan greatly underestimates the significance of methane emissions, by using the 100-year global warming potential. Over a shorter time horizon, methane accounts for 17% to perhaps well over 30% of the state's GHGs, rather than the 5.7% in the 2004 inventory.

- Further increase requirements for zero waste and recycling, as well as Extended Producer Responsibility.

- Ensure that actions to reduce greenhouse gases also help, whenever possible, to clean up California's unhealthy air.

- Limiting offsets will strengthen the demand for clean energy innovation, which in turn provides more good jobs for

Californians.

- Any offsets allowed should at most represent only a small portion of a polluter's required emission reductions. They should have stringent protocols ensuring that the reductions are quantifiable, new, permanent, subject to independent third-party verification, enforceable by CARB, and only located in California.

- Offsets from sinks, such as planting trees or avoiding tree cut-downs, should not be allowed, since they are too difficult to measure and often under-perform.

Subject: Global Warming Solutions Act Plan
Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thank you for your work on reducing Greenhouse Gas Emissions

Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce or eliminate altogether the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled. And make these targets mandatory with teeth attached in terms of penalties for failure to meet them -- the penalties in terms of the planet, after all, are catastrophic.
- Please require businesses to recycle their materials and to reuse, share, or purchase only recycled materials whenever possible.

We have a chance to allow California to survive the worst crises our planet has faced in the history of our species. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Subject: Air quality and global warming

Comment:

I urge the CARB Board to adopt a strong global warming scoping plan for California to both slow global warming and achieve immediate reductions in smog and other dangerous air pollutants that cause illness and death.

Communities throughout California are already facing a public health crisis from air pollution, experiencing 18,000 premature deaths yearly, 350,000 asthma attacks, over 4 million missed school days from children suffering asthma attacks or other respiratory problems, thousands of hospitalizations and emergency room visits, and stunted lung development in children. The elderly, infants and children, individuals suffering from chronic disease and low income-communities are most at risk for these health hazards. My wife of 44 years died almost 4 years ago. One of the medical conditions involved was severe pulmonary fibrosis, a terminal lung disease no doubt also exacerbated by our atmospheric pollution.

I urge the California Air Resources Board to adopt a strong plan to combat global warming in California and to set the standard for national and international action. I also urge the state air board to include a stronger focus on measures to reduce emissions from driving that contribute the largest percentage of greenhouse gases in California. The plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments. The plan should also include a strong goal and additional regulatory measures for reducing pollution from industrial sources such as petroleum refineries and cement manufacturing facilities.

In addition, the plan must demonstrate that the variety of proposed measures will not only make rapid progress toward reducing greenhouse gases, but will also provide local benefits to vulnerable individuals and communities and assist with adaptation to the negative effects of global warming.

Thank you for your consideration of my concerns to strengthen these key strategies in the AB 32 draft scoping plan.

Subject: AB32
Comment:

Dear CARB,

Please consider these recommendations for inclusion in the Final
AB32
Scoping Plan:

- The State should auction 100% of permits under the cap.
Polluters should
pay for their emissions, not be given free permits that subsidize
coal and
prolong the transition to cleaner energy.
- The Scoping Plan should specify that all auction revenues will
be used to
provide a Dividend to compensate consumers. Given the state of
the
economy, helping consumers deal with fuel and electricity costs is
the best
use of auction revenues.
- I support CARB's proposal for Carbon Fees on fossil fuel
companies to help
fund CARB's implementation of AB32. Carbon Fees can also provide
funding
sources for clean technologies, green jobs, energy efficiency
programs, and
more.

Sincerely,

Jen Jelincic

Subject: Emission credits, urbanization/deforestation, ZEVs

Comment:

The Plan greatly underestimates the impacts of increasing urbanization and deforestation in California.

Please auction off all emission credits. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their energy bills.

And please reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology and jobs in California .

- Big polluters should pay for all their emissions: 100% auction of emissions permits, no free giveaways.

- Consider cap-and-trade just a minor tool among market mechanisms. Other tools should be brought forward more robustly, including feed-in tariffs and carbon fees in the Plan's near-term action agenda.

- Make sure the 33-percent renewable electricity standard by 2020 is given the force of law, either through legislation or regulatory action.

- Promote and enable Community Choice Electricity Aggregation (CCA) and its potentially powerful GHG reduction potential for cities and counties.

- Give more specificity and amplitude to the easily reachable goal of electrifying transportation, especially greatly expanding ZEV numbers (plug-ins and electric cars) beyond CARB's currently far too low projected levels.

- Greatly strengthen the too-modest land use and agricultural sections of Plan. The Plan greatly underestimates the impacts of increasing urbanization and deforestation in California, and the significance of methane emissions, by using the 100-year global warming potential. Over a shorter time horizon, methane accounts for 17% to perhaps well over 30% of the state's GHGs, rather than the 5.7% in the 2004 inventory.

- Further increase requirements for zero waste and increases in recycling, as well as Extended Producer Responsibility.

- Ensure that actions to reduce greenhouse gases also help,

whenever possible, to clean up California 's unhealthy air.

- Limiting offsets will strengthen the demand for clean energy innovation and improvements in efficiency, which in turn provides more good jobs for Californians.

- Any offsets allowed should at most represent only a small portion of a polluter's required emission reductions. They should have stringent protocols ensuring that the reductions are from efficiency gains and actual reductions, quantifiable, new, permanent, subject to independent third-party verification, enforceable by CARB, and only located in California .

- Although preservation of california's remaining forests and chaparral wildlands must be a priority, offsets from sinks, such as planting trees or avoiding tree cut-downs, should not be allowed, since they are too difficult to measure and often under-perform.

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials. We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Ken Briggs

Subject: reduce greenhouse gas emissions

Comment:

I believe that a carbon fee would be the most effective and fair way to cut carbon emissions. Unfortunately, such a fee is politically unfeasible at this time. At the very least, then, all emission credits should be auctioned off. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their energy bills. And please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology and jobs in California .

Subject: Final AB32 Scoping Plan recommendations
Comment:

Dear CARB,
Please consider these recommendations for inclusion in the Final AB32 Scoping Plan:
- The State should auction 100% of permits under the cap. Polluters should pay for their emissions, not be given free permits that subsidize coal and prolong the transition to cleaner energy.
- The Scoping Plan should specify that all auction revenues will be used to provide a Dividend to compensate consumers. Given the state of the economy, helping consumers deal with fuel and electricity costs is the best use of auction revenues.
- I support CARB's proposal for Carbon Fees on fossil fuel companies to help fund CARB's implementation of AB32. Carbon Fees can also provide funding sources for clean technologies, green jobs, energy efficiency programs, and more.

Sincerely,
Tasha Wright

Subject: California's global warming Scoping Plan

Comment:

Big polluters should pay for all their emissions: 100% auction of emissions permits, no free giveaways.

- Consider cap-and-trade just a minor tool among market mechanisms. Other tools should be brought forward more robustly, including feed-in tariffs and carbon fees in the Plan's near-term action agenda.
- Make sure the 33-percent renewable electricity standard by 2020 is given the force of law, either through legislation or regulatory action.
- Promote and enable Community Choice Electricity Aggregation (CCA) and its potentially powerful GHG reduction potential for cities and counties.
- Give more specificity and amplitude to the goal of electrifying transportation, especially greatly expanding ZEV numbers (plug-ins and electric cars) beyond CARB's currently too low projected levels.
- Greatly strengthen the too-modest land use and agricultural sections of Plan. The Plan greatly underestimates the significance of methane emissions, by using the 100-year global warming potential. Over a shorter time horizon, methane accounts for 17% to perhaps well over 30% of the state's GHGs, rather than the 5.7% in the 2004 inventory.
- Further increase requirements for zero waste and recycling, as well as Extended Producer Responsibility.
- Ensure that actions to reduce greenhouse gases also help, whenever possible, to clean up California's unhealthy air.
- Limiting offsets will strengthen the demand for clean energy innovation, which in turn provides more good jobs for Californians.
- Any offsets allowed should at most represent only a small portion of a polluter's required emission reductions. They should have stringent protocols ensuring that the reductions are quantifiable, new, permanent, subject to independent third-party verification, enforceable by CARB, and only located in California.
- Offsets from sinks, such as planting trees or avoiding tree

cut-downs, should not be allowed, since they are too difficult to measure and often under-perform.

Subject: Strengthen the Scoping Plan

Comment:

First, thanks to CARB for all the excellent hard work put in to the Proposed Scoping Plan. I appreciate it greatly.

Here are my suggestions to strengthen the plan even further:

carbon fees would be a much better system than cap and trade, but if there is going to be a cap and trade program, it is crucial to AUCTION OFF Please 100% of the emission allowances. The money that comes in from this should go toward developing clean technologies, creating green jobs, and toward helping low-income people and small businesses reduce their energy bills.

Iâ€™m also very concerned about offsets. Itâ€™s nice to reduce cutting down of forests in other countries, but it should not take the place of reducing GHG emissions in California. Itâ€™s not OK to keep polluting the poorer neighborhoods in our state and use as an excuse that weâ€™re planting trees or doing something similar in other countries. Any offsets should be only a very small percentage of a polluterâ€™s required emission reductions, and they should be stringently regulated and monitored.

I would also like to see laws or regulations give make the 33-percent renewable electricity the LEGAL standard by 2020.

Community Choice Electricity Aggregation should be promoted strongly. Please also increase the requirements for zero waste and recycling, as well as Extended Producer Responsibility.

ï€ Finally, we need more ZEVs! The Scoping Plan currently projects far too few plug-ins and electric cars. The technology is there and we need to promote and use it!

Subject: Nov 20 scoping plan - approve

Comment:

I urge the CARB Board to adopt a strong global warming scoping plan for California to both slow global warming and achieve immediate reductions in smog and other dangerous air pollutants that cause illness and death.

By adopting a strong plan to combat global warming in our state, the California Air Resources Board will set the standard for national and international action.

I also urge the state air board to include a stronger focus on measures to reduce emissions from driving that contribute the largest percentage of greenhouse gases in California. The plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments. The plan should also include a strong goal and additional regulatory measures for reducing pollution from industrial sources such as petroleum refineries and cement manufacturing facilities.

In addition, the plan must demonstrate that the variety of proposed measures will not only make rapid progress toward reducing greenhouse gases, but will also provide local benefits to vulnerable individuals and communities and assist with adaptation to the negative effects of global warming.

Thank you for your consideration of my concerns to strengthen these key strategies in the AB 32 draft scoping plan.

Subject: AB 32 Scoping Plan to Reduce Greenhouse Gas Emissions
Comment:

Dear CARB Board Members

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

1. Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.

2. Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.

3. Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.

4. Please require businesses to recycle their materials.
We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Sincerely

Dr Watson

Comment:

I urge the CARB Board to adopt a strong global warming scoping plan for California to both slow global warming and achieve immediate reductions in smog and other dangerous air pollutants that cause illness and death. A strong plan will set the standard for national and international action. I also urge the state air board to include a stronger focus on measures to reduce emissions from driving which contribute both the largest percentage of greenhouse gases and dangerous air pollutants in California. Therefore, the plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments. To reach the state's targets for greenhouse gas reduction targets, the plan should additionally include a strong goal and additional regulatory measures for reducing pollution from industrial sources such as petroleum refineries and cement manufacturing facilities. It is also critical that any measures taken to reduce greenhouse gases contain do not increase hot spots of pollution in communities already impacted by multiple sources of pollution.

Subject: Reducing Air pollution
Comment:

Dear CARB Board members:

Thank you for your hard work so far envisioning a plan to implement the Global Warming Solutions Act.

I have a few requests that I believe will make this plan even stronger. I hope you will consider them during your meeting.

- Please auction off all emission allowances. Program revenues should go toward GHG reduction programs, such as clean technologies, green jobs, and aid for low-income consumers and small businesses to reduce their utility bills.
- Please work to reduce the role of offsets in the Plan. Providing too many offsets encourages continuing emissions in low-income neighborhoods and in defenseless habitats, and weakens the demand for clean energy technology innovation. Limiting offsets will create more clean-energy jobs, stimulating our state's economy.
- Please increase the targets for local governments to reduce emissions caused by poorly planned growth that drives up vehicle miles travelled.
- Please require businesses to recycle their materials.

We have a chance to make California even better as we address one of the worst crises our planet has ever faced. Strong CARB policies will help our state's residents realize some of the benefits we will receive by taking on global warming pollution: reduced air pollution, more clean-energy jobs, less waste and healthier communities.

Thanks again for your work on behalf of clean air for California.

Juanita Mangan-Van Ham
