There are 103 gondola cars in the system for a total of 1,030 cars.

Each car is equipped with a Vehicle Health Monitoring System (VHMS) that tracks mileage, brake wear, and load cycles.

The VHMS data is uploaded to the central server every 24 hours via a secure cellular connection.

Maintenance crews receive automated alerts when a car exceeds its service threshold.

Inspection reports are stored for a minimum of 5 years in accordance with company policy.

Fleet managers review the data weekly to plan repairs and minimize downtime.

Operators are trained annually on the proper use of the system.

Comments associated with this system are reviewed by the Maintenance of Way department.
