Subject: California's Low Carbon Fuel Standard  
Comment:

Dear Chairman Nichols,  
Thank you for your leadership in developing California's Low Carbon Fuel Standard. In addition to helping California meet our greenhouse gas reduction goals, the LCFS will help to improve air quality and public health by reducing our dependence on petroleum fuels.  
Californians are subject to some of the worst air quality in the nation and experience serious health impacts as a result pollution caused by motor vehicles, including cancer, reduced lung development in children, aggravated asthma, increased hospitalizations and premature death.  
Reducing petroleum consumption through the LCFS is an important strategy for fighting global warming and improving our air quality.

I urge you to move forward with the Low Carbon Fuel Standard and ensure that it provides the greatest benefit to California by:

- promoting the development and rapid deployment of a new generation of ultra-low carbon fuels, such as hydrogen and electricity;
- accounting for the direct and indirect land use changes associated with the production low-carbon fuels; and
- ensuring ongoing reviews of air quality and other community health impacts associated with the introduction of new fuels and fuel production facilities in California.

Along with the American Lung Association of California, I urge you to proceed with the adoption of a strong, sustainable Low Carbon Fuel Standard without delay, to improve air quality for all Californians.

Comment:

Dear Chairman Nichols,

Thank you for your leadership in developing California's Low Carbon Fuel Standard. The LCSF will help to improve air quality and public health for Californians by reducing greenhouse gas emissions and meeting our reduction goals. And it will help to reduce our dependence on petroleum.

The air quality in California is amongst the worst in the country and as a result Californians suffer serious health impacts due to pollution emitted from motor vehicles. These negative health impacts include cancer, reduced lung development in children, aggravated asthma, increased hospitalizations and premature death.

Reducing petroleum consumption through the LCFS is an important strategy for fighting global warming and improving our air quality.

I urge you to move forward with the Low Carbon Fuel Standard and ensure that it provides the greatest benefit to California by:

Subject: Strong Low Carbon Fuel Standard Needed Now  
Comment:

Dear Chairman Nichols,  
Pollution from petroleum fuels in California is responsible for nearly 20,000 deaths each year. Cleaner fuels are needed immediately to save lives and begin to slow the pace of global warming. Action is needed now!  
I appreciate your leadership in developing California's Low Carbon Fuel Standard. In addition to helping California meet our greenhouse gas reduction goals, the LCFS will help to improve air quality and public health by reducing our dependence on petroleum fuels.  
Californians breathe some of the worst air quality in the nation and experience serious health impacts as a result pollution caused by motor vehicles, including cancer, reduced lung development in children, aggravated asthma, increased hospitalizations and premature death.  
Reducing petroleum consumption through the LCFS is an important strategy for fighting global warming and improving our air quality.

Subject: Low Carbon Fuel Standard  
Comment:

Dear Chairman Nichols,

Thank you for your leadership in developing California's Low Carbon Fuel Standard. In addition to helping California meet our greenhouse gas reduction goals, the LCFS will help to improve air quality and public health by reducing our dependence on petroleum fuels.

Californians are subject to some of the worst air quality in the nation and experience serious health impacts as a result pollution caused by motor vehicles, including cancer, reduced lung development in children, aggravated asthma, increased hospitalizations and premature death.

Reducing petroleum consumption through the LCFS is an important strategy for fighting global warming and improving our air quality.

I urge you to move forward with the Low Carbon Fuel Standard and ensure that it provides the greatest benefit to California by:

- promoting the development and rapid deployment of a new generation of ultra-low carbon fuels, such as hydrogen and electricity;
- accounting for the direct and indirect land use changes associated with the production low-carbon fuels; and
- ensuring ongoing reviews of air quality and other community health impacts associated with the introduction of new fuels and fuel production facilities in California.

Along with the American Lung Association of California, I urge you to proceed with the adoption of a strong, sustainable Low Carbon Fuel Standard without delay, to improve air quality for all Californians.

Jim Smith

Subject: Low Carbon Fuel Standard.  
Comment:

Dear Michael,

Last week, we asked for your help in letting Governor Schwarzenegger know that you support the California Air Resources Board's (CARB) adoption of the Low Carbon Fuel Standard. Once adopted, this groundbreaking standard would reduce greenhouse gas emissions from transportation fuels - like gasoline and diesel - used in the state by at least ten percent by 2020. You responded by sending 260 letters to the governor to show your support for cleaner fuel options for California.

With CARB set to vote on the standard next week, the ethanol industry and other producers of non greenhouse gas friendly fuels are stepping up their efforts to convince CARB to delay and weaken the standard. It is vital that CARB hears your support directly to ensure that the strongest, most effective Low Carbon Fuel Standard is adopted without delay to fight global warming and air pollution by reducing petroleum consumption in California.

Please take action by Noon on Wednesday, April 22, by copying and pasting the letter below into the comment box on the Air Resources Board's comments page.

-----  
--

Dear Chairman Nichols,

Subject: California's Low Carbon Fuel Standard  
Comment:

Dear S. ,

Last week, we asked for your help in letting Governor Schwarzenegger know that you support the California Air Resources Board's (CARB) adoption of the Low Carbon Fuel Standard. Once adopted, this groundbreaking standard would reduce greenhouse gas emissions from transportation fuels - like gasoline and diesel - used in the state by at least ten percent by 2020. You responded by sending 260 letters to the governor to show your support for cleaner fuel options for California.

With CARB set to vote on the standard next week, the ethanol industry and other producers of non greenhouse gas friendly fuels are stepping up their efforts to convince CARB to delay and weaken the standard. It is vital that CARB hears your support directly to ensure that the strongest, most effective Low Carbon Fuel Standard is adopted without delay to fight global warming and air pollution by reducing petroleum consumption in California.

Please take action by Noon on Wednesday, April 22, by copying and pasting the letter below into the comment box on the Air Resources Board's comments page.

Dear Chairman Nichols,

Thank you for your leadership in developing California's Low Carbon Fuel Standard. In addition to helping California meet our greenhouse gas reduction goals, the LCFS will help to improve air quality and public health by reducing our dependence on petroleum fuels.

Californians are subject to some of the worst air quality in the nation and experience serious health impacts as a result pollution caused by motor vehicles, including cancer, reduced lung development in children, aggravated asthma, increased hospitalizations and premature death.

Reducing petroleum consumption through the LCFS is an important strategy for fighting global warming and improving our air quality.

I urge you to move forward with the Low Carbon Fuel Standard and ensure that it provides the greatest benefit to California by:

- promoting the development and rapid deployment of a new generation of ultra-low carbon fuels, such as hydrogen and electricity;
- accounting for the direct and indirect land use changes associated with the production low-carbon fuels; and
- ensuring ongoing reviews of air quality and other community health impacts associated with the introduction of new fuels and fuel production facilities in California.

Along with the American Lung Association of California, I urge you to proceed with the adoption of a strong, sustainable Low Carbon Fuel Standard without delay, to improve air quality for all Californians.

**Form Letter 62 for Comment 110 for Low Carbon Fuel Standard (lcfs09) - 45 Day.**

First Name: Alex

Last Name: Vollmer

Email Address: abvollmer@comcast.net

Affiliation: Member of the general public

Subject: Adoption of the Low Carbon Fuel Standard

Comment:

Dear Chairman Nichols,

Thank you for your leadership in developing California's Low Carbon Fuel Standard. In addition to helping California meet our greenhouse gas reduction goals, the LCFS will help to improve air quality and public health by reducing our dependence on petroleum fuels.

Californians are subject to some of the worst air quality in the nation and experience serious health impacts as a result pollution caused by motor vehicles, including cancer, reduced lung development in children, aggravated asthma, increased hospitalizations and premature death.

Reducing petroleum consumption through the LCFS is an important strategy for fighting global warming and improving our air quality.

I urge you to move forward with the Low Carbon Fuel Standard and ensure that it provides the greatest benefit to California by:

- promoting the development and rapid deployment of a new generation of ultra-low carbon fuels, such as hydrogen and electricity;
- accounting for the direct and indirect land use changes associated with the production low-carbon fuels; and
- ensuring ongoing reviews of air quality and other community health impacts associated with the introduction of new fuels and fuel production facilities in California.

Along with the American Lung Association of California, I urge you to proceed with the adoption of a strong, sustainable Low Carbon Fuel Standard without delay, to improve air quality for all Californians.

Thank you for your consideration of my thoughts.

Very truly yours,

Alex Vollmer

I urge you to move forward with the Low Carbon Fuel Standard and ensure that it provides the greatest benefit to California by:

- promoting the development and rapid deployment of a new generation of ultra-low carbon fuels, such as hydrogen and electricity;
- accounting for the direct and indirect land use changes associated with the production low-carbon fuels; and
- ensuring ongoing reviews of air quality and other community health impacts associated with the introduction of new fuels and fuel production facilities in California.

Along with the American Lung Association of California, I urge you to proceed with the adoption of a strong, sustainable Low Carbon Fuel Standard without delay, to improve air quality for all Californians.

Comment:

Dear Chairman Nichols,

Thank you for your leadership in developing California's Low Carbon Fuel Standard. In addition to helping California meet our greenhouse gas reduction goals, the LCFS will help to improve air quality and public health by reducing our dependence on petroleum fuels.

Californians are subject to some of the worst air quality in the nation and experience serious health impacts as a result pollution caused by motor vehicles, including cancer, reduced lung development in children, aggravated asthma, increased hospitalizations and premature death.

Reducing petroleum consumption through the LCFS is an important strategy for fighting global warming and improving our air quality.

I urge you to move forward with the Low Carbon Fuel Standard and ensure that it provides the greatest benefit to California by:

- promoting the development and rapid deployment of a new generation of ultra-low carbon fuels, such as hydrogen and electricity;
- accounting for the direct and indirect land use changes associated with the production low-carbon fuels; and
- ensuring ongoing reviews of air quality and other community health impacts associated with the introduction of new fuels and fuel production facilities in California.

Along with the American Lung Association of California, I urge you to proceed with the adoption of a strong, sustainable Low Carbon Fuel Standard without delay, to improve air quality for all Californians.
