Subject: Strengthen Scoping Plan To Address Immediate Reductions in Smog

Comment:

I urge the California Air Resources Board to adopt a strong global warming scoping plan for California to both slow global warming and achieve immediate reductions in smog and other dangerous air pollutants that cause illness and death. A strong plan will set the standard for national and international action. I also urge the state air board to include a stronger focus on measures to reduce emissions from driving which contribute both the largest percentage of greenhouse gases and dangerous air pollutants in California. Therefore, the plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments. To reach the state's targets for greenhouse gas reduction targets, the plan should additionally include a strong goal and additional regulatory measures for reducing pollution from industrial sources such as petroleum refineries and cement manufacturing facilities. It is also critical that any measures taken to reduce greenhouse gases contain do not increase hot spots of pollution in communities already impacted by multiple sources of pollution.

Subject: Re: Plan to Reduce Global Warming Emissions  
Comment:

Dear Air Resources Board,

I urge you to adopt a strong global warming scoping plan for California. This will both slow global warming and reduce smog and other dangerous air pollutants that cause illness and death. A strong plan will set the standard for national and international action. I also urge you to include a stronger focus on measures to reduce emissions from driving which contribute both the largest percentage of greenhouse gases and dangerous air pollutants in California. Therefore, the plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments. Subject: AB 32 Scoping Plan  
Comment:

The public health impacts from air pollution in California are already staggering, and we now know that global warming will only worsen dirty air, especially through increased hotter days and more wildfires. Therefore, I urge CARB Board to adopt a strong global warming scoping plan for California to both slow global warming and achieve immediate reductions in smog and other dangerous air pollutants that cause illness and death.

I also urge the state air board to include a stronger focus on measures to reduce emissions from driving which contribute both the largest percentage of greenhouse gases and dangerous air pollutants in California. Thus, the plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments.

To reach the state's targets for greenhouse gas reduction targets, the plan should additionally include a strong goal and additional regulatory measures for reducing pollution from industrial sources such as petroleum refineries and cement manufacturing facilities.

Finally, and equally important, it is also critical that any measures taken to reduce greenhouse gases contain do not increase hot spots of pollution in communities already impacted by multiple sources of pollution. This is particularly important since these communities suffer the highest rates of lung and heart disease.

A strong plan will set the standard for national and international action.

**Subject: Strengthen the State Global Warming Plan to Protect Public Health!**

**Comment:**

I urge the CARB Board to adopt a strong global warming scoping plan for California to both slow global warming and achieve immediate reductions in smog and other dangerous air pollutants that cause illness and death. A strong plan will set the standard for national and international action. I also urge the state air board to include a stronger focus on measures to reduce emissions from driving which contribute both the largest percentage of greenhouse gases and dangerous air pollutants in California. Therefore, the plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments. To reach the state's targets for greenhouse gas reduction targets, the plan should additionally include a strong goal and additional regulatory measures for reducing pollution from industrial sources such as petroleum refineries and cement manufacturing facilities. It is also critical that any measures taken to reduce greenhouse gases contain do not increase hot spots of pollution in communities already impacted by multiple sources of pollution.

Comment:

I urge the CARB Board to adapt string plans in an effort to reduce carbon emissions and prevent further global warming. The human impact in our air quality is getting worse and will only get worse if we don't acknowledge and ACT to CHANGE our current habits. We could definitely contribute less pollutants if we have significant efforts to back it up.

Subject: Help Stengthen the State Global Warming Plan

Comment:

I urge the CARB Board to adopt a strong global warming scoping plan for California to both slow global warming and achieve immediate reductions in smog and other dangerous air pollutants that cause illness and death. A strong plan will set the standard for national and international action. I also urge the state air board to include a stronger focus on measures to reduce emissions from driving which contribute both the largest percentage of greenhouse gases and dangerous air pollutants in California. Therefore, the plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments. To reach the state's targets for greenhouse gas reduction targets, the plan should additionally include a strong goal and additional regulatory measures for reducing pollution from industrial sources such as petroleum refineries and cement manufacturing facilities. It is also critical that any measures taken to reduce greenhouse gases contain do not increase hot spots of pollution in communities already impacted by multiple sources of pollution.

Comment:

Please make your proposed requirements tougher, not weaker. Do not give in to conservative local governments and developers. We need to solve the global-warming problem, not push it off on another generation.

Please do the right thing and stay strong. The world is watching.

Thank you!

Comment:

The less we do now the more we will have to do later as sea level rise floods our coastal communities and erodes our coastline. We need to make the maximum effort to cut carbon emissions by changing the way we develop land and in general do business. We must be more compact, more efficient, and more dense in our living arrangements, not in our approaches.

Subject: Smart land use is CRITICAL to reducing greenhouse gases  
Comment:

I urge you as strongly as I possibly can to enact very aggressive goals for the reduction of greenhouse gases, and in particular, to have a VERY aggressive goal for the greenhouse gas reduction attributable to land use.

Land use, specifically where we house our people and the number of vehicle miles people travel to and from work, is one of the paramount considerations in our total greenhouse gas output.

PLEASE SET A VERY AGGRESSIVE GREENHOUSE GAS REDUCTION IN THE AB 32 SCOPING PLAN.

Thank you!

Rob

Subject: approval of AB32  
Comment:

I strongly urge the board to consider approval of AB 32. How land is used is a crucial component of reducing greenhouse gases. We can no longer afford continuing to use our remaining land in ways that increase our use of fossil fuels by encouraging use of automobiles without available alternatives. Transit is best suited when dense development is encouraged and people will only walk or bicycle when the distances are practical. This will only happen with careful planning and land use. Where possible we should discourage development on agricultural land since there is a limited amount of arable land available for growing food.

Sincerely,  
Gerald Thomas
