Subject: The Hydrogen Economy

Comment:

The Dep't of Energy is developing higher temperature electric generation turbines (2650 F) that can operate off the combustion of hydrogen and oxygen. Hydrogen from natural gas is a known technology that can leave carbon dioxide to be captured and sequestered. The exhaust from a hydrogen turbine would be water where half the hydrogen would come from the methane. The carbon dioxide before being sequestered could be run through an Allam cycle and produce additional power efficiently and with a small planform. The hydrogen produced during off peak hours or from a slightly larger gasifier/water gas shift system could be sold to the vehicle marketplace (Hydrogen Fuel Cell Vehicles) or be stored at an order of magnitude less cost than battery storage (i.e., 25 kWh for tanks vs 250kWh to 500kWh for batteries). Such a system would promote biomass as the primary renewable option as against wind and solar. The above should be considered as part of the Advanced Clean Cars Review.

Comment:

Attached please find comments from automotive trade association executives representing new car dealers in 8 CalLEV states and some metro regions of CalLEV states.

The purpose of this letter is to urge CARB, as part of the midterm review process, to make much needed changes to the regulations so that automakers are properly incentivized to build ZEVs and deliver them to new car dealers with equipment and at prices that sell.

Subject: More ambitious ZEV required to avoid dangerous warming levels

Comment:

The world is not on track to prevent dangerous levels of global warming[1,2]. California must pursue more aggressive climate policies, both to reduce its own emissions and to catalyze mass adoption of new technologies necessary to avoid potentially catastrophic climate change.

The latest generation of plug-in hybrids and battery electric hybrids are affordable enough that California could massively increase the rate of adoption. The current rules set a 4.5% ZEV credit requirement for 2018 and 22% requirement for 2025[3]. Toyota could meet a 45% TZEZ requirement in 2017 if it sold its \$22,600 (after federal rebate) plug-in hybrid to everyone buying a Toyota sedan. In comparison, current Toyota sedans cost \$21,000 on average, require over \$12,000 for gasoline over their useful lifetime, and cause \$3,000+ in public health externalities, according to the American Lung Association.

I encourage CARB to take the following actions

1. A more rapid increase in ZEV requirements in light of the favorable economics presented above
2. A lifetime pollution fee on new internal combustion vehicles so that public health damages are priced into car sales. See the American Lung Association's report.
3. Introduction of a ZEV mandate by vehicle class to encourage development of zero emissions pickups and SUVs.

Subject: Northeast Legislator and Local Elected Official Support Letters for CARB Board Members

Comment:

Dear Air Resources Board and Board Members,

In advance of the March 24th California Air Resources Board (ARB) meeting and the Board review of the zero emission vehicle (ZEV) Program, we'd like to share the following material with you. We have been working with Legislators and Local Elected Officials in the Northeast to show there is very firm support for a strong review of the ZEV program. As you know, the decisions that the ARB makes on March 24th will directly impact the growth of the ZEV markets in the states that have adopted California's regulation. The northeast states have a multi-state goal of putting over 3 million ZEVs on the road by 2025, and have been gearing up for the anticipated expiration of the travel provision in 2018 within the ZEV program by implementing supportive ZEV policies and programs at the state and at local levels.

The attached supporting material shows broad support for ZEVs and the ZEV program at the state and local levels. Attached in pdf form please find:

- a letter from 18 legislators in the northeast, with the large majority of signatories representing transportation, energy, climate, or technology committees
- letters from local elected officials in the following states, including city mayors and Council members from: CT, ME, MD, MA, NJ, NY, RI, VT and Oregon, representing over 100 signatures

Please let us know if you have any questions on this material.

Thank you.

Best,

Dan Gatti, Policy Analyst, Union of Concerned Scientists
Mary Lunetta, Campaign Representative, EV Initiative Sierra Club
Katherine Stainken, Policy Director, Plug In America
Aminah Zaghab, Global Warming Solutions Advocate, Environment America

Subject: Yes to tough 2022-25 car pollution rules!

Comment:

This is a message of gratitude and support for the California Air Resources Board, Board Chair Mary Nichols, Board member Hector de la Torre, and other members of the Board who have announced their intention to finalize tough car pollution rules at their March 23-24, 2017 Board Meeting.

The rules to be finalized were worked out by the federal government, carmakers and California during Obama's presidency. They include stricter tailpipe emissions targets for model years 2022-2025 and a California mandate for zero-emissions cars. These rules will influence policy in enough other states so that car manufacturers will probably choose to comply with them for national production even if previously agreed federal regulations are relaxed by the Trump administration.

Maintenance of these stricter car pollution standards will be an important bulwark against complete dismantling of climate change measures by the U.S. EPA, which is now led by climate change deniers. Newly announced federal budget plans call for eliminating climate change science funding by the U.S. EPA and the State Department. Scientists everywhere must speak out against these destructive policies. As one of them, I commend the California ARB for its enlightened and encouraging stance in defense of the public interest.

Thank you!

Subject: Clean Vehicle Program
Comment:

I urge the Board to continue to push for more clean, zero emission vehicles. Don't give into auto company pressure. California needs more clean, zero emission vehicles. We need to be in the forefront in reducing air pollution and lowering green house gas emissions. Zero emissions vehicles are a quick way to do both with our present way of living.

We can't expect the federal government to do anything now to protect public health. The responsibility is on you to protect our health now and in the future.

Zero emissions vehicles save consumers money, provide a powerful, fast car and cut down on air pollution. We need as many as possible on the road. What you should be doing is forcing auto companies to not only make them, but to advertise them. I think they complain about lack of demand, yet they don't advertise.

Subject: Impact of federal regulatory action on Midterm Review

Comment:

We appreciate the opportunity to comment regarding California's Advanced Clean Cars Midterm Review (Midterm Review). This comment relates to the greenhouse gas reduction programs (GHG Programs) discussed in the Midterm Review. Due to recent federal regulatory action, we recommend that the Governing Board direct ARB staff to revisit some of the Midterm Review's conclusions. In particular, we recommend that staff be directed to assess whether California could better achieve GHG reductions in the transportation sector through the integration of mid and high blend ethanol strategies as components of the Advanced Clean Cars Program (ACC Program).

Staff Review of GHG Programs

ARB staff participated in the joint agency midterm evaluation of federal passenger vehicle GHG standards and corporate average fuel economy (CAFE) standards with the U.S. Environmental Protection Agency (EPA) and the National Highway and Transportation Safety Association (NHTSA). The Midterm Review reflects the staff recommendations that the ACC Program be maintained in its present form, and that California continue to participate in the national program through the deemed to comply provision. However the report states:

"These findings on the benefits to California are based on an analysis assuming the existing national GHG standards. If the stringency of the national GHG standards were substantially changed, (...) these findings would likely be different. In that event, California could revisit whether it would have to conduct a new analysis to determine whether compliance with a new National Program would be an appropriate approach under California's LEV III program to address California's unique air quality challenges and its mandates to achieve aggressive GHG reductions to protect public health and the environment."

Recent Federal Policy Developments

On March 13th, EPA and NHTSA issued a Notice of Intention to Reconsider the Final Determination of the Mid-Term Evaluation of Greenhouse Gas Emissions Standards for Model Year 2022-2025 Light Duty Vehicles. While it was appropriate for the Midterm Review not to forecast this development, EPA and NHTSA have now formally announced the reopening of these federal GHG policies. It is therefore prudent for ARB to recognize the existence of a dynamic federal regulatory landscape, and to revisit California's strategies accordingly. The Midterm Review provides the Governing Board and ARB with an immediate opportunity to begin designing California's GHG programs to be more self-reliant, and to continue

ensuring that these policies are informed by federal GHG policies.

Ethanol is a Proven Method to Reduce GHG's

Low blend ethanol has supplied most of the GHG gases achieved by California's Low Carbon Fuel Standard (LCFS) to date. Low blend ethanol has also generated most of the renewable identification numbers (RINs) under the federal Renewable Fuel Standard (RFS) and most of the carbon credits under California's Low Carbon Fuel Standard (LCFS). There are substantial additional GHG reductions that mid and high level ethanol can deliver to the state.

Flex fuel vehicles ("FFV's") are capable of utilizing high blend ethanol, with the typical fuel blend in California being 85% ethanol with 15% gasoline ("E85"). Previously, FFV's were a consistent component of both the CAFE and federal passenger vehicle GHG standards. FFV's received credit for improving fuel economy and reducing GHG emissions based on the calculations of vehicle mileage performance with E85. However, the level of actual E85 fuel usage in FFV's previously caused NHTSA and EPA to phase down the credit value of FFV's within the CAFE and GHG Standards. This lack of federal credit caused the automakers to reduce the number of available FFV models. In 2013, there were 157 models of FFV's. In 2017, that number has declined to 52. Paradoxically, the decline in federal policy support for FFV's corresponded with a strong increase in demand for E85, and a new pressing policy need for both FFV's and E85 stations to facilitate the introduction of mid level ethanol blends (MLEB's) for next generation vehicles that require high octane fuel.

This policy imperative is well-expressed in a very recent "Summary of High-Octane Mid-Level Ethanol Blends" authored by the National Renewable Energy Laboratory and Argonne National Laboratory:

"Original equipment manufacturers (OEMs) of light-duty vehicles are pursuing a broad portfolio of technologies to reduce CO2 emissions and improve fuel economy. Central to this effort is higher efficiency spark ignition (SI) engines, including technologies reliant on higher compression ratios and fuels with improved anti-knock properties, such as gasoline with significantly increased octane numbers. Ethanol has an inherently high octane number and would be an ideal octane booster for lower-octane petroleum blendstocks. (...) Thus the legacy FFV fleet can serve as a bridge by providing a market for the new fuel immediately, so that future vehicles will have improved efficiency as the new fuel becomes widespread. In this way, (High Octane Fuel) can simultaneously help improve fuel economy while expanding the ethanol market in the United States via a growing market for an ethanol blend higher than E10."

Thank you for your consideration of this comment.

Subject: Flex fuel in CA

Comment:

We have invested heavily into E85 retail infrastructure at 5 locations and consumers use it and the volume growth has been tremendous. We are not dependent on any grants to make this happen as we have done this with our own capital. CA consumers deserve a choice and they save significant money at the pump while using a product that is good for the environment. As a small business owner it is discouraging to invest in alternative fuels and then have changes made to the program.

Please call em if you have additional questions

Comment:

Dear Air Resources Board and Board Members,

In advance of the March 24th California Air Resources Board (ARB) meeting and the Board review of the zero emission vehicle (ZEV) Program, we'd like to share the following material with you. To show widespread support for clean vehicles programs from healthcare professionals. Attached please find our letter from 1100 doctors, nurses, medical students, and other health professionals, which includes over 200 signers from Clean Car States, to President-elect Trump calling on him to take climate action to protect public health.

The letter states, "With health impacts ranging from heat-related illness and deaths to asthma and respiratory illnesses, and more vector borne diseases, climate change is threatening the health of Americans across the country. You have the power to dramatically cut the greenhouse gas pollution fueling this crisis. We ask you to work to shift towards a 100% renewable energy and efficient future, while phasing out the use of fossil fuels."

The letter outlines the health damages in the US Global Change Research Program's 2016 Climate and Health Assessment. It urges increases in electric vehicles and higher fuel efficiency standards for cars.

Please let me know if you have any questions.

Thank you.

Best,

Aminah Zaghab

Comment:

Dear Chair Nichols,

Please find attached letter pertaining to the Advanced Clean Cars Midterm Review. In summary we wish staff to review the benefits of integrating mid and high blend ethanol strategies as components of the ACC Program. Ethanol plays the largest role in meeting California's LCFS GHG reductions goals as well as the EPA's RFS goals. Mid and high blends of ethanol can be paramount to the ACC Programs success.

Sincerely,

Eric McAfee
Chairman and CEO
Aemetis, Inc.

Comment:

Also, disallow the use of fracked methane gas in vehicles. The dairy industry is making much progress in capturing cows methane gas and purifying it for use in vehicles and it is burning cleanly. This would contribute less to global warming.

Vehicular exhaust has a higher association/correlation with heart attacks than cholesterol and cardiovascular disease. In addition, there are 8 studies across the country showing the greatest risk of giving birth to an autistic child is how close to a highway the mother lives. Scientists made lab rats obese and diabetic from auto exhaust & air pollution. (byWalter Crinnion, ND)
