Subject: documents being hand delivered due to size...  
Comment:

Good day, CARB Representative:

Please note: The documents CBIA will be submitting are 335MB and so, per my discussion with Ms. Mary Ellis, Clerk of the Board, I will hand deliver the documents to the CARB visitor center for submission this morning and follow-up with a call.

Attached is a letter to CARB.

In the interim if you have any questions or would like additional information, please contact me at 916 340 3351.

Thank you.

Christy Sinclair  
Legislative Assistant  
CBIA

Subject: The Proposed Reductions are Neither Just nor Reasonable

Comment:

The attached document's conclusions are as follows.

Targets will have to be more stringent than the AB 32 and S-3-05 target trajectories if we are going to fulfill our world leadership responsibility and give the world a chance at avoiding climate destabilization. The 2020 Target of -7% (per-capita from VMT) can only result in an AB 32 level reduction if both "Pavley" and the LCFS factors are used. The 2035 reduction target of -13% would have to instead be 35.15%, to just meet the straight-line trajectory of S-3-05 for 2035, and this is assuming the Pavley reductions continue on the "Pavley 1" trajectory all the way to 2035. This assumption about "Pavley" may be overly optimistic. The science-supported 2035 reduction is 45%.

After reading the attached document, do you agree with these conclusions? If not, why not? Since CARB is proposing reductions that are needlessly weak and will show the world that S-3-05 is being ignored in California by its ARB, don't you agree that this will tell the world that the state with the highest rate of dring in the world is not going to change and so anything they do to curb GHG they do knowing that California is refusing to do its part?

The best, largely overlooked strategies to reduce VMT are a comprehensive and variable road use fee pricing system, as is being installed by Skymeter; unbundling the cost of car parking; good bicycle projects and bicycle education; putting a stop to all freeway expansions; and reconfiguring sales taxes for freeways or freeway/transit combinations to instead be 100% for transit. These strategies could easily be implemented by 2020 and would easily decrease driving by a sum of at least 45%. The strategies to do this are primarily those that increase fairness for families that drive less than average.

This shows that mitigation for RTPs that dump large amounts of all kinds of pollution into the atmosphere is feasible but is being ignored. Do you agree and if not why not?

Given this set of conclusions, it is clear that the reductions proposed for SANDAG are neither just nor reasonable. By extension, this is true for the reductions proposed for the other MPOs.

Do you agree with the above statement and if not, why not?
