Subject: Subject: Proposal for Converting Carpool Lanes to Self-Driving Lanes

Comment:

I am writing to propose an innovative update to California's carpool lane regulations that aligns with our goals of enhancing road efficiency, reducing environmental impact, and embracing cutting-edge technology.

Proposal: Convert existing carpool lanes into dedicated self-driving lanes. Vehicles equipped with self-driving technology or advanced lane assist systems would be eligible to use these lanes, provided they maintain a specified rate.

Advantages:

Energy Conservation: Self-driving vehicles, operating in a streamlined and consistent manner, reduce stop-and-go traffic, thereby enhancing fuel efficiency and lowering energy consumption.

Environmental Benefits: Less frequent braking and acceleration lead to reduced emissions, contributing to cleaner air and supporting California's environmental goals.

Enhanced Road Safety: Self-driving technology and advanced lane assist systems improve driving accuracy and reduce human error, leading to fewer accidents and increased road safety.

Preservation of Carpool Lane Spirit: This proposal maintains the original intent of carpool lanes--promoting efficient use of road space--while adapting to modern transportation technologies.

Implementation: Vehicles would need to be re-evaluated and approved for use in these lanes based on their self-driving or lane assist capabilities. This approach ensures that only vehicles meeting safety and efficiency standards are permitted.

I believe this initiative would significantly benefit California's transportation infrastructure and environmental objectives. I would welcome the opportunity to discuss this proposal further and explore how we can collaboratively advance this innovative solution.

Thank you for considering this proposal.

Best regards,

Dan Chan

Subject: Battery Storage Systems

Comment:

Hello, with the Chapter 10: Infrastructure portion of this program, I believe that a BESS unit that uses DER's would fit under this category since it can be portable at times, and still provide a micro-grid solution to those who do not have the power needed for charging. Is this being considered or has this already been included?

Subject: Residential Air Filtration Program

Comment:

Hello,

I would like to see the Residential Air Filtration Program extend to other counties such as San Luis Obispo county. How can we urge the program expansion across the state and consider extending the resources to Central California?

Subject: Carl Moyer Program Guidelines

Comment:

The proposed equivalent treatment in considering Carl Moyer grants is ill-advised and ill-timed because:

- (i) 30% ZE "capable" is NOT 100 % ZE. There should be different incentives for 100 % and 30%.;
- (ii) It's a disincentive to innovate if CARB puts a cap on development at 30% ZE!
- (iii) It discourages harbor craft operators who have built or are building 100 %ZE vessels.
- (iv) It disincentivizes harbor craft operators who are planning to build 100 % ZE vessels.
- (v) It gives the wrong signal to investors to port related ZE technologies (e.g., green hydrogen, batteries, etc.), and
- (vi) For California port applications - it's ill-timed and hugely undermines the goals and mission of California's Hydrogen Hub.

Further,

- (i) the path proposed by CARB to qualify for 30% ZE status looks like an open invitation to be gamed, and
 - (ii) the rule enforcement path proposed by CARB is also wide open to game the rule;
 - (iii) As written it is impossible to monitor and control unless CARB's Enforcement Division staff is seriously augmented.
- It's well known throughout the industry that CARB lacks the enforcement ability and that non-compliant vessels operate with impunity throughout the state.

Otherwise put, the 30 % ZE CARB carrot - even though it's a poisoned carrot - is way too tempting - and the CARB stick is way too short.

And if you do insist to include a 30% ZE clause - first prove that it works before you open the barn door.

Thank you for considering these objections to the 30% ZE equivalency clause.
