Subject: World-first Best technology

Comment:

An air pollution is a world problem and is serious .Therefore I developed "Soyama Turbine" which was the first technology in the world that made exhaust gas exhausted by the internal combustion engine which was the main reason,a factory,the thermal power station absorption offset ,silence having no bad smell . The exhaust gas extremely decreases by attaching it to earth exhaust oral region mentioned above,and this turbine is a splendid turbine of the surprise that the exhaust sound makes solve having no bad smell not reduction .If the world is adopted with this turbine ,the earth can spend quiet daily life with clean air ,and abnormal weather ,the air pollution problem solve it, and the splendid earth will revive.Please examine adoption . Thank you in advance for your help. The United States it be eternity！
