Subject: Small Off-Road Engine Regulations: Transition to Zero Emissions

Comment:

I urge you to delay implementation of this action to at least 2030.

As a licensed landscape contractor and small business owner, earlier implementation will lead to economic hardship and potential loss of business.

While these efforts are to be applauded, current replacement of small gas engines with battery power is not reliably viable with current technology.

Some issues with this technology are as follows:

- charge capacity too small to run all day
- discharge rate anxiety by professional users (run down time highly variable depending upon use)
- reduced battery lifespans due to constant or frequent use
- insufficient torque/power (i.e. more power = less run time)
- higher price point to purchase
- no to little standardization in battery design
- issues with California's electrical grid including PSPS
- difficulty and or extra costs associated with the need for charging stations or carrying multiple extra batteries during work day

In general, the landscape industry is beginning to use some battery technologies such as portable power equipment (drills, Saws, chainsaws, small lawn mowers).

If battery technology was equal to small gas engines in power and price, I can assure you, many contractors would begin to make the switch. If nothing else we are a practical industry.

Thank you for your consideration

Subject: Generators for disabled

Comment:

Please exclude generators for areas where PG&E loses power, areas such as Santa Cruz County. I am disabled and need power 100% of the time. I currently use a Honda 5000ex to power the refrigerator/freezer to store my perishable prescriptions and heat. If it weren't for the generator I don't know how I could exist at my home of 21 years. I cannot afford a Tesla wall battery and solar, which wouldn't last as long as needed up here in the mountains anyway. After the CZU fire we were out of power for weeks. I doubt battery generators that will last with the same energy and time usage by 2022 (maybe by 2035). Don't cut off our lifeline.

Comment 6 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021) - 45 Day.

First Name: Michael
Last Name: Lloyd
Email Address: michaelloyd3280@gmail.com
Affiliation: Retired

Subject: Proposed SORE regulations
Comment:

I've always been a firm proponent of reasonable environmental laws, but the proposed SORE regulations are very impractical, at least in rural areas of the state.

For forty years, I've lived on 20 acres of steep oak woodland and wild grassland in the hills of Mendocino County.

After the seasonal rains stop every spring, due to the fire danger and Cal Fire mandates I have to cut several acres of wild grass around my home and along both sides of my 750-foot-long driveway with a string trimmer ("weed eater"). Since it's impossible to predict when the last seasonal rain falls, my neighbors and I sometimes have to cut three times.

A battery-powered string trimmer only lasts roughly 20-30 minutes before needing several hours of recharge, and the cutting is much slower than with a gas-powered device. An extension cord for an electric trimmer will only go so far, and can throw sparks into dry grass where cords plug together.

The grass isn't cut for landscaping purposes, but to enable Cal Fire to try and save my home, and maybe give us precious seconds to escape a wildfire.

This spring, due to the drought, three oak trees, plus seven Douglas fir that I planted 25 years ago all died. The oaks simply fell over, the seven Douglas fir I had to cut down. One of the oaks fell across my driveway leaving sixty feet of tangled branches across my driveway, stranding the house and my vehicles on the wrong side of the blockage. I had to cut for days and days to make pieces small enough to stack on level ground. The Douglas fir I cut up to pack uphill out of the woods.

I don't know what I'd do with battery-powered chain saw, or an electric one.

A lot of forest waste can be chipped instead of control burned. But chippers need gas engines, and don't work very far from a road.

Obviously the problem of dead trees isn't just my own, it extends all over fire-prone northern and central California.

And then there's my 80+year-old neighbor, who lives alone in the woods off the grid. She has solar panels for electricity, with a

generator for when the sun doesn't shine due to prolonged bad weather, especially when the days are short. She needs a gas-powered backup generator to charge her storage batteries. No power, no light. And no water from her well pump.

Cal Fire needs large gas chainsaws to fight wildfires. The logging industry needs chainsaws to operate far from electricity. Second-and third-growth forests need thinning to be healthy. If a battery goes dead cutting down a tree, the tree can start splitting up the middle threatening the safety of the faller.

And if people in the cities can't grow lawns economically due to the high cost of mowing, converting to rock gardens and wood decks mean that the grass won't be there to cleanse the air and absorb heat.

How will the power used to generate the electricity to charge the battery originate? Hydropower, geothermal, wind and solar won't be enough.

Please pardon if I've misinterpreted some of the proposed regulations. Information is spotty and contradictory at this stage of the game.

Thank you for your time.

Michael Lloyd

Subject: Please remove ridiculous restrictions!

Comment:

It has become clear to me that the California air resources board will only allow you to pollute if you have a lot of money. I have made numerous air pollution complaints unto facilities I live down wind from. They continue to pollute on a daily basis. As a victim of ridiculous legislation that has forced me to sell perfectly good equipment and has drastically altered my way of life and my ability to make a living I can say that as a tax-paying member of society I am considering moving to another state where the legislation and cost of living doesn't put a strain on me and my family. Now there is legislation that has been and is further limiting my Recreation. Please be realistic and consider fuel reduction in the forest as a way to limit carbon emissions as an alternative to the drops in the bucket of emissions that this legislation attempts to halt.

November 3, 2021

I am a an industrial supplier to commercial cleaner / small business owner operating a commercial cleaning business servicing Caltrans, City of Stockton Parks and Rec, City of Stockton Graffiti embayment, KFC, Taco Bell, San Joaquin County Sheriffs Department Correctional (municipalities / office parks / retail /residential customers) in the greater Northern California area for the past 33 years.

I proudly come from the Stockton community located in San Joaquin County. I employ 10 workers and we take great pride in the service we provide the community.

For the last 30 years, we partnered with Caltrans, City Of Stockton, Unified School Districts of Lodi Stockton Linden, Manteca, San Joaquin County Sherriff's Department and many other city and county officials to clean roads, walk ways, jails, restaurants, and malls and the (main / most efficient) tool they use is an internal combustion powered pressure washer. Beyond this we have 77 of crews working daily. The mandate of no internal combustion engines being considered would eliminate the jobs of nearly all of our staff and their staff.

We care deeply about a clean environment for both the health of our neighbors and beauty of our community. In Stockton and surrounding communities. We have participated in water recovery / water treatment as well as propane burner usage in accordance with all state and local regulations.

Thank you for your consideration.

Best Regards,

Benny Bozzelli

Subject: Delay SORE for Pressure Washers

Comment:

I have been in the pressure washer industry for decades specifically the business to business segment. Industrial equipment generally with 10HP to 25 HP engines. Those pressure washers are able to conserve water over smaller equipment. Many types of cleaning happen over night and in places where higher power to run electric units is not available. These applications are real and very difficult, if not completely impossible to manage with battery technology. A small part could be replaced with higher voltage (230V Single or 3 Phase), however hooking up to these power sources for a contractor poses many safety risks to the public and contractor in the small of amount of places that would work. Pressure washers use a great deal of energy in order to conserve water and labor, in a way that cannot be done with battery technology. How much extra water will be required if the gas engine units and the performance they offer isn't available?

I think a delay of implementation of the SORE rules for Pressure Washers, especially industrial, should be delayed. My limited research shows that gas engines produce between .52 and .59 pounds of carbon dioxide/KWH of energy. Looking at the site that shows CA emissions for power (which is an awesome tool and site), shows numbers ranging from .16 to .34 pounds of CO2/KWH. So I can see that there is a savings that might average to about a savings of about .32 pounds of CO2/KWH. That as an awesome savings. But the national average for power generator is .92 pounds of CO2/KWH. Clearly California is leading in Green House admissions. However, right now it seems that each small engine that is replaced in CA with electric would produce MORE CO2, as CA could provide that greener power supply to the rest of the country. Think of it, if you can eliminate .92 pounds of CO2/KW, or even more as that is a weighted number at it includes California Power.

Has the comparison of .59 pounds CO2/KWH for SORE been compared with the much higher environmental cost of .92 pounds of CO2/KWH from power generation?

I encourage you to delay the Pressure Washer engine requirement until at least 2028 for the sake of CO2 emissions alone, but also because pressure washers serve needed functions that provide water savings and health benefits and offer employment to many, especially in the minority communities. I also think that many SORE will be eliminated for residential users because the big box stores will trend towards battery powered. Those are not commercial and won't meet the needs of many applications, but many SORE will be eliminated. Also and for reasons we all probably

understand stationery pressure washers that are used in factories and other places that could use electricity for supplying power already are.

Thank you again for reading this and answering if it would be best to wait until over all power generation was lower in CO2 output than a gasoline engine per KWH, if a water analysis has been done on this, including waste water recover technology that often requires the higher HP of large SORE engines, if minorities would be effected more by these changes in regards to contract cleaner owners, operators and employees.

Subject: Comment for SORE implementation

Comment:

I have been in the pressure washer industry since 1983, specifically the sales and service of pressure washers in the business to business segment. We primarily deal with industrial equipment generally with 10HP to 25 HP engines. Those pressure washers are able to conserve water over smaller equipment. Many types of cleaning happen overnight and in places where higher electrical power to run electric units is not available. These applications are real and can be very difficult, if not completely impossible to manage with battery technology. A small part could be replaced with higher voltage (230V Single or 3 Phase), however hooking up to these power sources for a contractor poses many safety risks to the public and contractor in the small amount of places that they could possibly work. Pressure washers use a great deal of energy in order to conserve water and labor, in a way that cannot be done with current battery technology. How much extra water will be required if the gas engine units and the performance they offer isn't available? Consider the fact that an average garden hose produces 10 gallons per minute while an average pressure washer consumes 4 gallon per minute. Another aspect of water use is the recovery operation of the water in an outside cleaning environment. All mobile water recovery systems use small gas engines, how will this affect that operation?

I believe a delay of implementation of the SORE rules for Pressure Washers, especially industrial, should be delayed. The research shows that gas engines produce between .52 and .59 pounds of carbon dioxide/KWH of energy. Base upon the site that shows CA emissions for power shows numbers ranging from .16 to .34 pounds of CO2/KWH. So I can see that there is a savings which could average to about a savings of about .32 pounds of CO2/KWH. This would be an incredible savings, based on the national average for electrical power generation is .92 pounds of CO2/KWH. Clearly California is leading in Green House emissions. However, right now it seems that each small engine that would be replaced in CA with electric would produce MORE CO2, as CA could provide that greener power supply to the rest of the country. Subject: sore2021, Just not logical.
Comment:

CARB is gambling, staff has stated industry will figure out solutions that are equivalent to SORE and zero emissions. They are gambling with the lives and livelihoods of many Californians. Currently there are no alternatives to engines in many categories.

The logical decision would have been to require stricter emission requirements in stages. It is feasible.
Today it is possible to reduce the emissions of SORE, have it cost less than inadequate performing ZEE, and not induce the other issues of ZEE such as waste, power generation, etc.
This is not to say ZEE doesn't have a place, there are several areas where using ZEE is a better alternative, however banning all at one fell swoop is irresponsible.
My plead with CARB and its staff is reconsider your approach, where there are no viable alternatives to SORE, tighten emission limits. Please don't gamble Californians lives by "betting on black".

Subject: concerns of AB-1346 as a pressure washing contractor

Comment:

I'm writing in behalf of professional mobile cleaning contractors, (pressure cleaning companies). This group of professionals helps maintain sanitation, keeps our streets and facilities cleaned and safe. I fear your proposal will harm this industry worldwide. We already have a challenging supply demand with engines in this size being on back order. With this change there will surely be large companies buying mass amounts of engines prior to 2024 making it nearly impossible for smaller companies to maintain their business's, by completely stopping their ability to get the equipment needed. This will only lead to poor sanitation, increased slip hazards and simply a dirtier place to call home. Restaurants require hood cleaning, which with fewer contractors may increase fire hazards and deaths. Think about your children playing at a dirty unsanitary playground because there's not enough contractors to maintain cleanliness. I ask you to please don't take this group of professionals for granted. We all live in, work at and visit a place that needs ongoing cleaning. In addition pressure washers reduce water consumption, which water use will surely increase drastically.

Subject: SORE
Comment:

I am a believer in reasonable environmental laws but the proposed SORE regulations are not practical in CALFIRE's State Responsibility Areas, areas governed by PRC 4291.

We have 4.5 acres adjacent to the Sierra National Forest. We've lost 45 mature ponderosa pines to the bark beetle infestation along with numerous large oaks. It would be impossible to clear and remove these fire hazards with battery powered chainsaws. Since we are adjacent to the Sierra National Forest where no land clearing or management has occurred it is incumbent upon us to weed eat our 4.5 acres to provide a margin of safety to our home. A battery powered weed eater does not have the horsepower necessary, or the battery life, to complete this task and comply with CALFIRE's requirements.

We respectfully request an exemption from SORE regulations for residents residing in State Responsibility Areas of California.

Gary Gilbert, Retired
CalFire Region Chief

Subject: Small gas engine ban

Comment:

To whom it may Concern:

I am a commercial pressure washing company located in San Diego and been in business over 20yrs. The equipment I use (small gas engines) are imperative to keeping areas clean and sanitized as well as for water reclaiming. There is no electric equipment strong enough or efficient enough to handle these tasks. As a commercial business my families livelihood depends on this equipment not to mention keeping areas like shopping centers and municipalities clean. Not being able to use this equipment will cause a build up of rodents and diseases as we use hot water also. This will be a public safety concern. My recommendation is if banning small gas engines is non negotiable, then banning personal/home use engines and make licensed commercial businesses exempt from this. Electric applications are good, but not in the case of commercial usage. The environment will be much worse by this new proposed law and you will find sanitation to be the biggest issue, second being aesthetics. I strongly urge you to consider these issues because if they aren't dealt with prior to the law being in effect, I'm afraid you will be addressing them at a later date. If you have any questions, please contact me.

Regards,

Barry Lambert

Subject: Please Delay AB 1346

Comment:

Firstly, as a California resident, I do appreciate your efforts to minimize climate changing emissions. As a mother of 3 young children living in Southern California, I care deeply about the air quality and believe we should take actions sooner than later, but with a plan to support those who will be immediately affected by the change in place. At work I serve many customers who are very hard working small business owners whose livelihood depends on professional and commercial equipment listed as SORE.

I am afraid prematurely moving forward with banning small engine powered equipment in 2024 without having alternative technology at a comparable price range and performance will not have the support from small business stakeholders. As it stands, it would have numerous negative impacts on landscapers, mobile washers, commercial contractors, outdoor power equipment dealers, and other businesses throughout the state of California, as well as their employees, and the various commercial and residential customers they service.

Currently professional-grade battery/electric equipment to run many hours straight without charging intermittently in commercial service settings - and the infrastructure needed to charge, transport safely, and recycle it - doesn't yet exist at the scale necessary to meet the state's accelerated timelines.

In the industry I serve (commercial cleaning, pressure washing), the majority of the (equipment) end user customers are small businesses (dis-proportionally minority owned or/and operated) who may or may not have financial means to upgrade their equipment even if comparable technology and infrastructure to support it readily existed. It is also my belief that substantial rebates or subsidies programs (far more aggressive than South Coast AQMD rebates for lawn and garden equipment) should be offered to mitigate financial burdens from upgrading equipment to small business owners for this effort to work until the battery technology truly becomes mainstream and affordable to all.

To make a difference in improving the air quality, the majority need to comply. Without feasible means to get the majority who will be directly affected by it on-board, the adoption of the new bill will only result in a colossal waste of time and tax dollars.

With this in mind, I respectfully request the Legislature and CARB postpone efforts to ban small engine powered equipment until the cost and performance of comparable electric/battery powered

equipment meet commercial, emergency, and rural residential use needs. In the meantime, I encourage CARB to work with equipment manufacturers to explore additional small engine emission reduction technologies that can be implemented in the near future.

Thank you for your time.

Comment:

We provide homes with multiple services with the use of gasoline hand held blowers and hard scape pressure washing tools. It's effective and efficient for business, and allows us to provide many homeowners and renters a great way to keep their home and neighborhoods clean. Removing (not making them for future persons/businesses) these efficient tools that will in all likelihood under-improve our state's smog emissions will very likely hurt small and medium businesses instead. Battery operated engines are not currently light enough, effective enough, repair-easy as the gas counterpart. The answer to affectively reducing and or removing bad emissions worldwide is for countries to grow more forests and reduce construction development (and the energy & equipment that is needed to build it), reduce automobiles by nation-advocating walking or biking distance local shopping, and for government to assist in providing finances for inventors and educators in the small engine industry to produce tools that are as efficient and effective or better than current ones; BUT we are not there yet!

Subject: Reconsider Ban of small off-road engines

Comment:

Hello and thank you for taking the time to read my concerns regarding the Ban of small off road gas engines.

I started Carters Precision Pressure Washing to do two things. Make a living and help the surrounding communities.

I am not against programs that help to heal the environment. I believe this measure is too harsh on the people that rely on the engines to make a living. There is currently no technology to replace the small off road engines.

This ban will cause thousands of businesses to have to close their doors. It will not only effect the business owners but those that work for them too. Ultimately, it will effect economy of our state with the loss of hundreds if not thousands of jobs.

Is there to a chance to ban the small off road engines to the basic consumer on the 2024 date and allow those running a business with machinery to continue to purchase for an additional time.

Our city needs the small businesses to clean the dirt and grime that accumulates on our streets, sidewalks and structures.

These businesses help in many ways past the pollution that is created by the engines that run the equipment. We manage water usage while cleaning and when reclaiming used waste water. It is not only for the beautification but helps to sanitize

I hope those in power take the time to look at an alternative to the hard line set to stop sales of the small off road engines. How it effects those doing business in the state of California.

Best regards.

Fred Carter

Subject: Chainsaw ban

Comment:

The current proposal to ban the sale of gas powered chainsaws is set to cause immeasurable safety issues for rural California. While electric chainsaws may work for suburban homeowners and businesses, they are patently unsafe for large jobs including falling trees for firewood or as used by HotShot crews to remove hazard trees in fire zones.

It is unsafe to have a chainsaw run out of power out in the woods mid-cut and is obviously not possible to simply plug it in. An exception for rural CA should be made.

Subject: Deep Concerns about AB-1346 as a California Pressure Washing Contractor

Comment:

Dear CARB,

Below are 5 primary reasons why I think you should reconsider your timeline and conditions with AB-1346. Please take these items into account, I am a concerned pressure washing contractor in this lovely state who use to live on the street 11 years ago and this industry has helped me create a life for myself and my employees that we are forever thankful for.

1.) Health and Safety - Power washing is a very efficient way to keep sidewalks slip-free to OSHA standards, sanitized and clean, which reduces the spread of infectious diseases, rodents, and pests.

2.) Power Washing is a green method of cleaning. It tremendously reduces the usages of water and dangerous chemicals being used while cleaning. Maintenance cleanings and restoration processes provide an extended lifespan to surfaces and building materials which reduces the carbon footprint of replacements.

3.) Gas-powered reclaim systems are paramount in controlling wash water so contractors can obey the Clean Water Act(1972). It's important to keep our waterways pollution-free.

4.) Directly affects minority and low-income individuals - Pressure washing is a lower barrier of entry providing a gateway out of poverty. A power washing technician can make a living wage with benefits in the state of California and provide for their families.

5.) There is current cost-efficient technology that can dramatically reduce emissionsput off from small engines up to 90%+. Moving to zero emissions this fast with the current best available technology is inadequate, and will force businesses to close, cut staff, and/or raise the cost of services significantly.

Subject: Small off road engine regulations

Comment:

I'm concerned about the pending regulations of off road engines, specifically generators used for back up power. I live in the Santa Cruz mountains, and 4 years ago removed my wood stove, replacing it with a electric heat pump. This was done to reduce air pollution, save energy, and improve air quality in my house. I did this knowing I would have to increase the size of the generator I use to provide back up power in the winter. We have many power outages in my area every winter. Solar panels/battery back up is not possible due to the surrounding redwood forest. Battery back up using the power grid is of limited use when some outages are 3-7 days. The battery capacity to power a heating system would be huge and very expensive. Removing our ability to use generators for backup power would make life very difficult for my family and many others in similar areas during power outages. Please consider an exemption for generators in areas where there are no alternatives.

Thank You

Subject: Support Proposed Amendment to Small Off-Road Engine (SORE) Exhaust & Evaporative
Comment:

November 4, 2021
Dorothy Fibiger
California Air Resources Board
1001 I Street
Sacramento, CA 95814

RE: Support For Proposed Amendment to Small Off-Road Engine (SORE)
Exhaust & Evaporative
Emissions

Dear Ms. Fibiger:

The Curtis Park neighborhood is a politically active and vibrant 2,500 household community located in South Sacramento. The Sierra Curtis Neighborhood Association (SCNA) holds monthly board meetings to address neighborhood issues, manages the Sierra2 Center for the Arts & Community, hosts many annual events, and publishes monthly the Viewpoint newspaper.

SCNA strongly supports the proposed amendment to small off-road engines (SORE) which would set emission standards for smog-forming pollutants to zero for all new SORE beginning with the 2024 model year. Small off-road engines include, leaf blowers, lawn mowers, weed trimmers, chain saws, golf carts, generators pumps, and specialty vehicles. Small generator engines are exempt from the zero emission standards. However, the proposed amendment would make the emission standards more stringent for generator engines beginning with the 2024 model year. The emission standards would be zero for generator engines for the 2028 model year.

SCNA has been actively involved in zero emission equipment (ZEE) for yard care. The Sierra 2 Center contracts with FRESH AIR Yard Care which uses only electric and hand powered equipment to maintain the landscape. SCNA has a Clean & Quiet Yard Care Ad Hoc Committee that promotes and educates the neighborhood about greener alternatives to yard care at community events and through their website
<https://sierra2.org/neighbors-seek-cleaner-quieter-yard-care-tools/>

Please let us know if there is any other actions SCNA can take in support of the proposed SORE zero-emission standards.

Sincerely,

William Hoover,
Board President, Sierra Curtis Neighborhood Association
president@sierra2.org, (916) 452-3005

First Name: Kyle
Last Name: Turk
Email Address: kturk@holtca.com
Affiliation:

Subject: AB1346
Comment:

Dear SORE Lead Dorothy Fibiger,

I am writing to you today as a concerned constituent in opposition to AB 1346 and CARB's proposed rule to ban small engine powered equipment in California by 2024. These proposals, if enacted, would result in significant hardships for my small business, and my customers, many of whom are minorities and your constituents.

Moving forward with banning small engine powered equipment in 2024 would have numerous negative impacts on landscapers, outdoor power equipment dealers, and other businesses throughout the state of California, as well as their employees, and the various commercial and residential customers they service.

These proposals would drastically limit equipment choice for professional landscape contractors and outdoor power equipment dealers across California. We are small businesses who rely on small engine powered equipment every day as cost-efficient and high-performing solutions to install and maintain living landscapes and green spaces in communities throughout the state.

As battery technology has advanced, so too has the availability of electric outdoor power equipment. However, professional-grade battery/electric landscape equipment - and the infrastructure needed to charge, transport safely, and recycle it - doesn't yet exist at the scale necessary to meet the state's accelerated timelines.

While I appreciate the efforts of legislators and CARB to address California's air quality needs, the small engine-powered equipment category is a comparatively minimal contributor to the state's emissions. Further, the living landscapes our equipment is used to install and maintain contribute to tangible environmental benefits, including reductions in the heat island effect, carbon sequestration, trapping dust and particulate matter, providing habitat for pollinators, and producing oxygen.

With this in mind, I respectfully request the Legislature and CARB postpone efforts to ban small engine powered equipment until cost and performance of comparable electric powered equipment meet commercial, emergency, and rural residential use needs. In the meantime, I encourage CARB to work with equipment manufacturers to explore additional small engine emission reduction technologies that can be implemented in the near future.

Regards,
Kyle Turk

Comment:

If this bill is not removed it is going to put a lot of small business out of business. Not to mention more business will leave the state cause unemployment to go up. People will go out of state and purchase these items anyway. Pluss the publics electric bill's will increase. I can not see how this is going to effect any good change in air quality anyway because most small off-road engines do not emit very much emissions. Why put people out of work or force businesses to leave the state when the economy is so bad. I have looked at a lot of the studies and for the most part they do not take into consideration the large rural counties and how this is going to effect those economies. Thank you for taking the time to read this.

Subject: Ineffective Use of the Law

Comment:

A ban on small gas powered motors is unnecessary and ineffective. A complete reliance on electric power has consequences too. It is not a thoroughly clean source of energy and most importantly our existing infrastructure cannot support it. New regulations on circuit breakers are causing modern & up to date coffee makers and microwaves to trip breakers. There is already much strain between restricted home warming fires and space heaters tripping breakers. Stop cutting us off on both ends.

Comment:

The only concern I have is that this transition to electric motors be directed at minority communities as well. Many small landscaping businesses don't always have the best English skills so they would need this information in their language of preference. This transition should also be subsidized for lower income business owners. Many of the landscape maintenance community do not gross a high income and this transition might be costly to them.

I do not see how they will be able to provide non gas powered equipment to handle large commercial properties from a landscape maintenance stand point. Also in the past the cost of such is absorbent and we are unable to pass all those costs along to our customers. If government wants to pass such a Law then the equipment must have multiple manufacturing options and to ensure replacements and repair shops are available. Financial aid needs to be given to us to avoid closing business.

Comment:

Gas powered blowers have been outlawed for many years with no enforcement. Maintenance companies have known this and have just been trying to get away with it for as long as possible. And they will continue to delay until the last possible moment. So even if you move the date forward, it will not cause folks to purchase new equipment until the deadline. So demand will not be created and we will be in the same exact position 4 years later.

Subject: No ban on gas equipment

Comment:

A ban on gas equipment is the elimination of the landscape industry. This ban is a unrealistic endeavor. Our California representatives and governor should have never just spewed out this ban. If they actually did some tease arch they should have started with residential sales. Homeowners account to more gas powered equipment then all of the landscapers put together. To equip one truck for electric powered equipment there has to be a on board generator, 20-30 spare batteries. Now what happens when the power grid fails. How do these companies operate? They don't! Again this ban would kill the landscape industry! Governor Newsom does not know how to run a state and has destroyed California!

Subject: Gas Blowers/Landscape Maintenance

Comment:

Dear California Air Resources Board,
Gas blowers and other gas-operated landscape maintenance equipment should be banned as soon as possible. They create noise as well as air impacts that affect the equipment handlers as well. These machines do not clean, they only move dirt and leaves to neighboring areas.

The generous timeline to eliminate gas-operated equipment could be used to train all the well-meaning maintenance personnel and their employers in healthier maintenance techniques. Many of the people unhappy about the ban cannot imagine another way to accomplish their work.

Perhaps training is a positive step the State of California can help implement. The person that helps me with my office and home landscape maintenance received free bi-lingual water-efficient landscape maintenance training sponsored by the City of Santa Barbara and City College many years ago. This resulted in greater pride in his work, along with saving water.

Comment:

To whom it may concern

I run a small commercial landscape business

If I have to change for gasoline-powered equipment to electric this will put a huge burden on over head cost as well as efficiency of using electric power equipment, Are Gasoline-powered equipment runs 5-6 hours a day 6 days a week, It would be very frustrating with electric power equipment that is heavy cumbersome from battery weight and will not hold up to hours of service charge and abuse that we need to complete quality work that is demanded in the landscape maintenance services

I would have use a gasoline powered charger to charge the battery equipment, this does not make sense Please do not place this burden on businesses and resend this law

Subject: Opposed to small engine ban (gas powered)

Comment:

Banning gas powered engines before there are adequate replacements will place a tremendous hardship all business of all sizes. Just in the tree care industry, we will not have adequate replacement for equipment. For example, we will not have saws large enough to cut large fallen trees and large dead trees. Currently there are not comparable electric alternatives in this broad small engine ban. Banning critical resources to maintain properties, the forest and infrastructure before replacement tools are available is very poor planning.

Subject: S.O.A.R. Proposed Changes

Comment:

Hello C.A.R.B. Board,

While the currently available battery powered Outdoor Power Equipment is suitable for most Homeowners that maintain small in-town residential lots there is nothing currently available that meets the needs of Commercial Landscapers or large property owners with respect to 1) available power, 2) run time, or 3) affordability. Certainly the equipment that is on the market today is much better than what was available just a few years ago but for a User that needs to run a machine all day to earn a living what can be purchased right now just will not get through the day without many batteries and some way to charge them while working out in the open.

We need a distinction between the Residential Users and Commercial Users. The product on the market right now absolutely meets the needs of those folks working on their homes in-town so please go forward with restrictions to what they will be able to buy in 2024.

For hard working Landscapers, working all day every day to keep our state the beautiful one that it is, they need to let the OPE Industry continue to refine and improve the battery-powered equipment to come up with product that can truly replace the gas-powered equipment that they currently use.

Thank you for your consideration,

Dan Sumner

Subject: Banning gas powered equipment

Comment:

Should gas powered lawn equipment be banned.

The short answer is no. These governments mandate trends are nothing more than the government creating its own new market and agenda on the backs of hardworking people across the country.

The clear facts are we ban oil and gas production only to increase production from other parts of the world that don't even come close to the high environmental standards currently in use by the United States. Do let's have other countries that don't regard the environment produce oil and gas so we can feel better here in the muted states as if we have reduced the worlds carbon footprint.

Another analogy is our countries distain for suppressing people and human rights yet we have shipped our manufacturing jobs to places like China that are one of the worlds leading countries in human rights abuse. But American politicians can smuggly talk about our progress.

Ronald Reagan once spoke on appeasement and how it can only end in surrender or fighting.

So I say stand up for your rights now. Don't fall for the lies.

William

Already using Many electric machines and they are better than gas. our Mean Green 60" Ride mower and 48" stand on mower have improved profitability significantly over gas and reduced maintenance time and expense. Our electric chain saws and hedgers are an improvement over their gas counterparts also. Reduced operator stress and PPE requirements are also beneficial.

Comment:

This communist/socialist proposal is bullshit. I can't even run a diesel truck that I paid good money for, for more than 1000 miles a year, with a new regulation. The California communists will eventually put a 100% tax on our profits to pay for this eco bullshit that is not proven, and that is what they are essentially doing. Down with governor Grusome. Keep doing what you're doing and not only will we be taxed to death, but the prices to retool will be passed on to the consumer.

Comment:

2024 is too short of a time frame to ban small gas power equipment and try to replace them with electric or solar power. Two major problems, one is the electric power does not possess the power and diversity yet to replace some of the larger equipment. The second issue that seems to be ignored is the amount of batteries and disposal issues that will now be caused by an enormous amount of batteries that will be flooding the market.

We should continue to manufacture low emission engines and maintain new more efficient motors until the electric motors can fully replace existing equipment. 2028 should be a minimum target date.

Comment:

It would be completely irresponsible to ban all gas powered equipment. I understand limiting some pieces of equipment but there are so many aspects of tree work that require bigger and more powerful equipment. There would be so many dangerous trees that couldn't be removed without a large gas powered saw which would cause so much damage when it fails. Potential wild fires. Potential damage to private property. Potential harm to citizens. Not to mention the thousands of jobs that would be lost as work is eliminated. Not a well thought out move.

Comment:

I belong to the CLCA. Contrary to what most of my colleagues think, I wonder why the new law to outlaw gas-powered engines hasn't come sooner? Grass lawns are an extreme waste of water and the labor to maintain such is a total waste of manpower. I suggest replacing all grass lawns with native plants which are drought tolerant and sequester carbon better than grass could ever do. Native plants sequester carbon and keep it in the soil by encouraging mycorrhizal fungi to build out its structure made of carbon and keeping it in the soil, not in the air. Native plants are also food factories for pollinators and promote bio-diversity which is essential to the well-being of the soil food web for our planet.

Subject: Banning of Gas Powered Small Engines

Comment:

I run a smaller office for a national tree care company. Our office prides itself in having the latest technology and best equipment. We have almost all new trucks and chippers. We use husqvarna battery chainsaws almost exclusively for tree pruning. That said, we still rely on the use of gas powered chainsaws greater than 45cc as the technology is not offered. We also lean on our gas equipment when working in remote locations, for fire abatement, and recharging batteries is not an option. A ban of gas chainsaws would bring our industry to a screeching halt. While I do feel that the technology will get there I think there needs to be adequate time for the industry to adjust. I appreciate the consideration.

Thanks

Travis

Comment:

In my opinion it is time our industry stop using gas powered equipment asap. The image of landscape companies can only benefit for embracing a more environmentally friendly way to conduct our work.

If we plan now on switching to electric tools, it will be done by 2024 without much financial pain. How many years does a mower or blower last when used daily? What about the less maintenance needed to operate electric tools? When factored in the equation it makes even more sense to switch.

In California we have had to adapt to a lack of water and learn about efficient irrigation systems and installing less thirsty landscapes or find another way to make a living. Working for cleaner air and a better environment is no less important and well worth the initial investment. After all we are in the GREEN industry!

Subject: Regulations to small off-road engine regulations

Comment:

Sacramento is a city of trees. Also it is a city of leaves. But all year long, you can hear the drone of leaf blowers everywhere, any hour of the day, and sometimes, night.

They are polluting. I can smell the gas exhaust as I ride my bike past them. They create very dirty air, especially in the dry summer, when dust mixes with exhaust fumes. Apparently an hour of gas-powered leaf blowing puts as much pollution in the air as a car trip from here to Denver.

They are loud. Their drone keeps people from opening their windows. Their drone drives away birds and other small creatures. They create a dead zone as everything moves away to avoid their obnoxious effect.

Leaf blowers and other small gas-powered tools are obnoxious, unhealthful and dangerous for the environment. Many can be replaced easily with their electric-powered counterparts.

For the sake of common sense, peace and quiet, and the survival of the planet, please take this small step, and regulate the use of gas-powered engines! Thanks so much.

Subject: Proposed Ban on Gas-Powered Small Off-Road Engines
Comment:

I believe that the proposed ban on the sale of gas-powered small off-road engines, beginning in 2024, is a wise and necessary measure. The regulations do not, and should not, prohibit the use of existing gas powered small engines. If it did that would represent a significant hardship to many landscape maintenance companies as well as residential homeowners. Creating a hard deadline and getting the word out NOW will ensure the preparedness of the users and the manufacturers.

Perhaps the \$30 million proposed allocation to help with the transition from gas to electric could be in part used to incentivize the creation of better battery technology, a battery allowance, and or homeowner rebates (largest user segment).

Waiting for technology to arrive delays this necessary step, both incidentally as well as purposefully. Drawing a hard line in the sand with a reasonable cut off date of 2024 ensures continued diligence to perfecting the technology. Don't let up.

I support the proposed ban on the sale of gas-powered small off-road engines, beginning in 2024.

Thank you,
Cheryl Fields, ASLA
Senior Landscape Architect

Comment:

I've been a landscape contractor for 30 years. While we have embraced battery landscape equipment, there are applications where the technology is not yet close to practical or replaceable. Medium to large chainsaws; The power needed to weight ratio of battery power makes it impossible to move safely while working, even backpack battery don't have enough runtime and also add operator loose of balance and fatigue. Lawn mowers; the weight added by battery's sufficient to operate large mowers creates soil compaction problems and requires frequent charge or change outs that make them impossible to use commercially or institutionally. While battery Backpacks solve some power longevity problems, they add fatigue, safety, heat stress and cost issues (over \$1000.00 each). Firefighters, Licensed tree & landscape workers need exemptions from this ban to safely be able to take care of our urban environment until suitable, plausible equipment is available.

Subject: Another example of how government is not paying attention to the impact on business

Comment:

This new proposal for gas powered equipment is another example of how government is not paying attention to small business. For two reasons. First a lawn service business will not be able to function without gas powered vehicles unless they buy thousands and thousands of dollars worth of batteries to operate this business. Anyone that has used an electric blower knows that it requires multiple batteries just to do one house. They use a lot of electric power. Each battery is in excess of \$100. So if a small company is doing 20 houses a day you will need \$2,000 for each worker on the crew.

But the second part of this is now you are creating toxic metal contamination for when these batteries go bad in two years. Then these batteries will need to be replaced again at another \$2,000 per man.

Third is why doesn't our government think these things through? How much of the electricity that is used in these "electric machines" are using electricity made with fossil fueled powered electric plants. Is this all smoke and mirrors to make it look good to the public but not really making changes at all? You are still using fossil fuels to make the electricity.

Subject: Outlaw of gas powered landscapig equipment

Comment:

In response to the proposed new regulations we have been incorporating battery powered blowers and lawn mowers into our landscape maintenance operations over the past 3 years . These are applicable to small projects where the service is only an hour or two and is applicable to Homeowners not commercial use. We have found that battery technology has not yet caught up to this type of equipment. For those properties that request battery operated equipment there is a increase in cost of equipment and labor pasted on to the consumer. I believe that the time table of 2024 is to short and will negatively impact our business as equipment costs rise. More time is needed for the equipment industry to implement battery technology into their equipment that will provide cost effective equipment with better battery life. Suggest that this be rolled out to all residential equipment and eliminate the sale of gas powered equipment to the homeowner as a first step.

Comment:

I am concerned about a clean environment; HOWEVER this bill is misguided, and does not address the many workers who need commercial pressure washers, as my family does for their income.

Please consider an exception for commercial pressure washers with ICE.

Thank you

Jim Bailey

Subject: Transition to Lower Emissions
Comment:

I have been a licensed landscape contractor for more than three decades. I whole-heartedly support transitioning from gas power to electrical for small equipment, such as blowers, mowers, hedge trimmers, etc. Not only are the current machines bad for the environment, they are bad for people operating them. The noise and emissions are awful.

Opponents of this measure insist it is between battery and gas powered machines. Battery life is a legitimate concern. When practical, a corded machine is a viable alternative, as is charging an extra battery or two at every stop. Increased demand for the technology should result in innovation, increased efficiency and price competition, much as it has with electric cars. Over time, I doubt many will miss paying for gas, oil and other maintenance not required by electric motors.

An incentive/buy back program, possibly something like the "cash for clunkers" (CAP) program to help with upfront costs, accurate data on the lower costs of running electric equipment might help ease the concerns of some. Another fact to mention is clients, just about all clients, cannot stand gas leaf blowers and other loud equipment. You can sell the transition to your clients as something not only good for the environment but good for their peace of mind.

Smart landscape professionals will turn this to their advantage.

Comment:

This 2024 transition that bans gas powered lawn equipment will have a significant impact on the many smaller operators of local landscape maintenance companies. There is a concern regarding access to electrical outlets and maintaining charging of batteries as may become necessary. Significant financial grant assistance will be required for the smaller companies who have already been impacted by the pandemic and the associated loss of business.

Comment:

We have been in the business of landscape and gardening repair equipment for the last 20 years. We have been providing service to small companies and individuals in the gardening industry. They have been our main business structure and they have been concerned about this new law and most of them have been commenting about moving to another states to continue their business or moving to another country. This law will not only affect our business but our small community which most of our customers are hispanics and their main resource for income is their gardening work. They are concerned about all the money they have to spend in batteries for their equipment since they sometime spend more than an hour with a gas powered blower on a single job and the only powered leaf blower available the battery only lasts 45 min to an hour so they will have to buy like 6-7 batteries which run over \$1000 each and they will have to make sure they charge them every night and have to buy a charger for each of them which also run over \$150 each. This is going to make our customers consider moving to another states where they can still continue with their work. If our customers start doing this I will have to let go of my employees and will have to close down my business after 20 years, please consider all these concerns from my customers and from my employees. Thank you.

Subject: Gas powered landscape equipment
Comment:

Yes. Gas powered landscape equipment should be banned immediately.

For 10 years, my small but profitable maintenance company used hand held battery powered equipment. We carried extra fully charged batteries with us. The equipment did not harm our ears, irritate clients/neighbors, cause lung damage due to the fumes, endanger our environment, and the air just smelled better. The equipment was light and powerful enough to do everything we needed except to blow off heavy wet mowed grass or heavy wet soil. we used rakes, brooms, and shovels for those tasks if necessary.

Our environment and our careers are in jeopardy because if it gets too hot and dry for plants to survive, we will not have a landscape industry. Currently, there are even desert plants that are dying due to excessive heat and lack of minimal water.

Unless all of us are inconvenienced to slow the climate crisis, even if it is expensive, we will have a planet on which we don't want to live or on which we can not live.

Currently, not one major country on earth wants to spend the money or be inconvenienced by changes that will enable the continued existence of our children, grandchildren, and all of the children on earth to live in the world as we know and love it.

Comment:

with over 50 years experience in california landscape care our company Hanson Palms llc wanted to voice our opposition to not only the extreme shortness of time to change over to all electric equipment but the basic misunderstanding of commerical care of landscapes in california . Point 1 there are no battery powered equipment that are capable of being carried by a single person that will function as a replacement for gas power backback blowers, The units would be extremely heavy, require charging stations that are mobile on the trucks and be 30 % more expensive min. Point 2 other equipment such as parking lot sweepers, which are gas powered cannot be used because of the size of the machines prohibits their use in small areas . Point 3 there is currently no equipment available to mow large pasture like areas of turf or clean up cramped small areas . How can the state of California impose replacement guidelines when there is no alternative equipment available.

Subject: Electric vs. Gas Landscape equipment

Comment:

While the goal of reducing emissions by eliminating gas powered landscape equipment is worthwhile, the alternative technology just does not exist that would be powerful enough and cost effective enough for commercial maintenance applications.

For example: we have typically in each of our commercial landscape maintenance trailers two each gas powered: blower, mower, hedge trimmer and string edger. Eight pieces of equipment that on average are used about six hours a day each, that's 48 hours of run time needed. Equipment that is powerful and can deal with 105 degree heat, cold near freezing, rain, UV, wet heavy leaves, wet lawns very efficiently.

For the alternative equipment battery life is all over the place and often what's listed is best case, not taking into account that heat, cold, exposure to rain and UV, heavy power drains like wet leaves or wet grass all reduce battery life and battery power (battery power is not constant like gas power) very quickly. So for our eight pieces of equipment used about six hours a day each we would need on board at least how many batteries? Dozens ... with a charging/holding rack that could hold them.

We'd need a new trailer for our trailer to handle the extra weight and charging racks, not practical, and at how much additional cost if it was? Or we load it all onto the pickup truck and since it has to be protected from the elements and theft, we lose the storage/hauling capacity of the truck. Then we need additional separate trucks and crews for hauling, what are the costs both financially and to the environment, to all the extra trucks and trailers? Very, very significant.

As for charging ... our trucks run for maybe five minutes as we go between accounts, then they sit idle/not running when they at an account for thirty minutes or more. Could all those batteries be recharged for the next day given those short run times between accounts? Or would we need a whole separate, massive, charging station at our small storage yard? By the way, we don't have extra room for a charging building (has to be indoor, can't be exposed to the elements or theft), or even electricity for that matter, at our storage yard. How would we do it and at what very significant capital investment costs?

What about overall battery life? Not long I suspect with all that heavy use, in extreme conditions, a few months to a year? So now you are talking about millions upon millions of dead batteries

annually, that have to be replaced frequently at large cost ... and that are potentially toxic in and of themselves. Maybe half get properly recycled ... but the other half are going to end up in the landfills. What's the cost, both financial and environmental, to that?

How will this rapid forced change affect the one person commercial operation? The small operation with a couple of crews? The larger operations with fleets? How will the many significant costs, and these are not incremental costs, get passed on to the consumers?

So, while the goal of reducing emissions is worthwhile it does not appear that this has been thought out, researched or studied. And it needs to be studied in the field, over time/several years in different seasons and weather conditions and on the scale needed. Please do so before implementing any mandates.

Greenworks battery powered equipment worked great for as long as I was able to charge the batteries. However, the company is in Canada and problem solving with that company is next to impossible! I now have a group of Greenworks tools that are inoperable because I can't get the batteries charged or buy new ones. I really liked the ease in usage while I had battery power, though. The equipment needs to be more accessible if it's required.

Subject: Gas-powered Equipment and a Small Business

Comment:

To Whom It May Concern:

As a family-owned business with less than 8 employees, we already face a plethora of hurdles struggling to stay afloat, especially in the midst of a pandemic.

Prices of materials and supplies are surging while our ability to pass costs along to customers is diminishing; projects bid on are no longer profitable just weeks later. Unlicensed individuals and large landscape companies are at an unfair advantage of reducing or absorbing costs when bidding projects. The daily operations are becoming too expensive to maintain when all we are trying to do is keep our business open with integrity and hard work as the back bone of our operations. All we strive for is to contribute to our community and make a living for our family and employees we view as family. Some days, it feels like one more hardship may just be the final straw that puts us under.

With the mass circulation of information regarding the potential ban on purchasing new gas-powered equipment as early as 2024, our small business cannot help but feel an overwhelming sense of dread and fear for the obstacles this ban would implicate.

As a commercial landscape provider, our staff meet onsite our yard each morning to clock in. From there, they embark on 8 hours service routes ranging from 5 to 50 miles away from home base. During that time, even the simple task of finding a restroom to use can be difficult. With possible bans on new gas-powered equipment, we now will need to figure out ways to charge all of our equipment, while still remaining profitable, without causing an inconvenience to our customers, and to do so with limited resources as the technology that has been developed for the commercial landscape industry is severely lacking. The availability of affordable equipment that can hold charge long enough to support a full day of use does not exist nor does the equipment necessary to charge that equipment.

As a member of this community, we are not opposed to the need for advancements, change, and taking direct responsibility towards working as a "greener" company. We instead are terrified of how to continue operations during a time of already exponentially increasing costs and dwindling profits while transitioning to a new technology that just hasn't had the proper research and development.

Ultimately, we are asking...begging... that additional time be given and that additional resources be allocated towards the development and expansion of "green" technology so that we can all make this transition in a way that is efficient, affordable, and supportive to everyone in our community.

We ask for fair and genuine consideration so that small businesses, families of our community, can survive.

Respectfully,

McKayla Benites

Subject: Absolutely gas tools should be 95% banned

Comment:

Absolutely gas should be 95% banned. Ive been fully battery operated on myself and crew for 2 years now. Its been amazing.

- I no longer have to buy gas and oil, and have leaky cans in trucks and vans.
- Nobody can ruin a tool by mixing gas wrong saving me thousands in lost equipment. Not only bad mixing kills tools, but creates more smoke when done wrong.
- Once you have battery and chargers. Additional tools cost less money.
- You can use customer supplied power, which is often solar.
- I've added solar to one vehicle and we never have lack of battery charge.
- Less sound and noise pollution for my customers
- Less sound for my crews ears, no exhaust in they're lungs. Healthier for them and the planet.

The only reason gas should be used is huge weed eating and fire clearance work. The batteries just don't have the capacity for acres of mowing.

Subject: Difficulty for proposed small engine ban

Comment:

I have operated a small engine sales & repair business since 1984 and have 5 employees with thousands of customers who depend on the small engine industry. I first want to say I am concerned about our environment and want to do my part in keeping it clean but I also know banning all small engines by 2024 is not really feasible with the technology in place now or by 2024. All of the brands we represent have been designing new and environmentally conscious equipment but some products cannot be replaced with electric power.

Here are some concerns listed:

Among the problems of using battery powered commercial landscape equipment, there are:

- issues related to charging many batteries such as fire hazards to a facility
- limits of electrical circuits in a facility
- limits of power availability to a facility that would be charging at least 1,000 batteries for 50 landscape crews in 1 day (assuming mowers, blowers, etc would all be using batteries, 20 5ah batteries per crew which is a bare minimum, not mowing much grass)
- limits of personnel to work overnight to rotate batteries
- limits of "peak hours" where electricity is rationed exactly when landscapers would need to charge many batteries in the evening
- inability to continuously generate electricity from a gas powered generator in an emergency

We have been involved with homeowners and business owners that suffer from power loss, fires, flooding and other losses and our gas powered small engine equipment has been a life saving resource to help them! This cannot be taken lightly.

There are also thousands of workers that depend on small engine equipment to make a living and yes beautify California some would suffer huge financial losses if this ban goes into affect on 2024.

I would suggest our government looks for more information on implementing electric power for small equipment and will talk with industry leaders in our field to see if the proposed restrictions will work.

Affiliation: LUSA Holdings, LLC

Subject: 2 cycle equipment emissions
Comment:

I believe the added costs of inhibiting the use of 2 -cycle equipment by 2024 will cause more emissions and hardship for the users of this equipment. I have a background in commercial licensing of lithium ion battery technology and believe I have sufficient understanding to have a real opinion.

Current electric equipment technology is not sufficient to reliably use in the landscape industry. The material science in the batteries is not yet capable of holding a sufficient charge long enough and deliver enough power to satisfy the typical landscaper. The balance of weight, cost, life and load is not yet appropriate for our use.

Thus forcing companies to use inferior technology too soon will only increase the number of batteries, pieces of equipment needed to be purchased, all drivers of carbon emissions, while also increasing drive time for crews, mechanics and repair shops trying to support each crew in the field.

Subject: gas powered landscape equipment

Comment:

Currently battery powered equipment and electrical equipment can't compete with gas powered equipment in terms of power, output, and efficiency.

if landscape companies are not allowed to use gas powered equipment, we would have to raise our rates. if gas powered equipment becomes illegal in the state of california, the only way this can make sense is to fine homeowners who contract with contractors who use gas powered equipment.

if pollution is the issue, then we need to look beyond landscape equipment and look at the vehicles we use, particularly diesel powered trucks that haul and deliver goods.

Comment:

To whom it may concern,

I think that it should be regulated, granted. By the county and needs of said counties. Highly treed counties with lesser population should be exempt. The very tools that are used daily to survive in these counties are being affected by this proposed amendment. People that use wood to heat their homes = you suckers just freeze.

loggers that help thin and manage the forests, What will they do for work? Loggers are a special breed of people we need those people to be in the woods where they are happy and thrive. The monies that the government has taken and supposed to allocate towards thinning and maintaining the overgrowth needs to be sent to just that. Too many years of neglect by the politicians has lead us into another political scam of climate change. If the money taken from the American people was spent and proportioned adequately our California wild fires would have not killed so many innocent people.

the forests have been neglected for decades that is evident. Our future goals should include thinning of federal and county forests with the highest regard. Tools used to do this very job should not and can not be taken away.

In conclusion,

Healthy trees clean and make oxygen that all mammals breath. Healthy forests that are kept up and funds spent properly on programs to do just that. Help us mammals breath fresh clean air. Trees clean air quality every day that they are alive. When controllable wild fire are allowed to destroy millions of acres of uncleaned forests that is a shame. We have the resources we have the people we have the equipment we have an amendment that will end all of this! This is a bad amendment towards the health of humankind. Reconsider per county, per sq acre of forest, per population, it can be done with honest non bought politicians. We the people want our voice heard we are the funds that pay the way for politicians and we want our money spent differently!

Subject: Carb zero emission gas engine ban
Comment:

To whom it may concern,
the technology does not exist to ban all gas engines and will not
in 2024. you will simply force those with no solution out of
business in your state. Yes in the handheld market there are
solutions that are improving. in the construction market which
will no doubt be active with the infrastructure bill there is none
at this time fo many of the gas powered units used in
construction.

it is also an issue in turf care as well. it would seem to be
premature when there is no replacement in many cases. not to
mention that the power grid in California has been challenged
already.

lastly, where does lithium mining and the disposal of batteries do
to the environment. it sounds great to go battery but it is still
a long way off before it is available in all products and not a
biohazard for disposal.

there is room for emmissions improvement going forward and a common
sense tiered approach will be a better path for all.
thank you

Comment:

I believe that the need for equipment that can perform for a 10 hour day will not be readily available at reasonable pricing for municipalities to be able to continue to offer emergency response services. Currently, the need for in-field charging means that either our gas or diesel trucks or generators will need to be run to facilitate charging batteries. Will generators be exempt? There will be an on-going need to generate power to charge or run electrical equipment in the field. Public safety depends on it.

I don't think our electrical infrastructure can handle the increased demand.

Subject: gas powered tools

Comment:

As much as I believe the requirement to replace gas powered equipment to battery powered may be a burden for some by outlay of additional cost, I feel it's necessary to move in this direction. We are at a forefront of making change and the landscape industries is no different. I'm curious if there would be available a buy back program that could help offset some of the burden? Three years seem fair enough to give companies time to make change and transition over this period. Our environment is so important, and the green Industries can be a leader in doing something that will affect the world.

Thank you, Brad

Subject: Consider Proposed Amendments to the Small Off-Road Engine Regulations: Transition to Zero

Comment:

I have been using battery-powered blowers for the last 10 years when the City of Santa Monica introduced their ordinance. These blowers are quieter and you don't smell the gasoline fumes in the air, particularly when multiple companies are servicing clients on the same days throughout the weeks. There is also less fire danger using battery-operated blowers when red zone ordinances are in effect.

I think there should be some funding available to help smaller companies transition to gas-powered leaf blowers as well. The batteries are the most expensive part of the equation and the higher the wattage, the more expensive. They also need to have multiple batteries and chargers that charge quickly so that the same number of clients can be serviced on their regular schedules.

Subject: Small engines

Comment:

Any efforts to eliminate small engines should be abandoned. There are much more productive ways to mitigate carbon emissions such as proper Forest management. Small engines are a drop in the bucket of emissions compared to the hundreds of thousands of Acres of forest burned. Legislation like this costs residents of the state millions and millions of dollars. California is becoming less friendly to the poor and working-class people.

Subject: Gas Powered Equipment Sales Ban

Comment:

It is LONG past the time to end the use of these highly polluting devices - many of which are used in landscaping. Alternatives exist and the state is offering incentives such as funding for electric blowers. Change is never easy but economies will adapt to meet the need for the greater good. Postponing or delayment does not solve the larger air quality problems - only kicks the can up the road.

I support the ban and look forward to a greener future.

Subject: small engine ban

Comment:

I am against any ban on small engines. Small engines work hard and last a long time. Battery operated equipment is an option for the contractor, not a mandate. I own several pieces of battery operated equipment, which I love. But I also love the small engine. No battery mower can top my Honda mower. What are we going to do with all those used batteries? This is do good-ism to the max. I'm against it.

Subject: proposed ruling outlawing gas powered landscape equipment

Comment:

Please consider postponing this mandate to outlaw gas powered equipment until appropriate improvements have been made to electric powered (or other alternative) equipment options allowing the vigorous demands of the landscape industry to be met consistently on a daily basis. As a proponent for change based on environmental impact of gas powered machines, we have tried electric powered equipment on a number of occasions including outfitting a low demand landscape maintenance route with standard required demo equipment. We were met with challenges from the beginning including inferior power, underwhelming battery life, heavy equipment, etc. all culminating in inferior performance and higher labor demands. With increasing wage demands and now potentially new equipment purchase requirements, I urge that 2024 be reconsidered for a later date in order to improve efficiency for a more seamless transition on all levels. Product performance, battery life, quick charging stations, gas powered equipment buybacks/rebates, supply issues and so more all need to be addressed before we can make such a drastic change.

Subject: Regarding Gas Powered Equipment

Comment:

To whom it may concern,

I am a licensed landscape contractor in California.
I have read the bill, which alleges that the alternative technology is equivalent to gas powered engines. This is completely false. My company uses the battery powered equipment, in addition to gas powered - and there is a very clear winner here. Gas powered equipment is far more powerful, efficient, and cost effective.

1/1/24 does not allow enough time for electric/battery-powered commercial grade landscape equipment to be able to handle the demands of professional landscape work.

Please allow gasoline-powered commercial grade landscape equipment to be sold until at least 2028, so equipment can be further developed, costs can come down and supply chain issues be solved.

Thank you.

Sincerely,
Robert Olsen

I am an industrial supplier to commercial cleaner / small business owner operating a commercial cleaning business) servicing (municipalities / office parks / retail /residential customers) in the greater Southern CA area for the last 21 years.

I proudly come from the Anaheim community located in Orange county. I employ 11 workers and we take great pride in the service we provide the community.

Within the last year, we partnered with Orange County Conservation Corps, multiple municipalities, fire department, LA County Fire, OC Parks, multiple school districts including OCUSD, Anaheim, Perris, Tustin. The list goes on and on. Our equipment is used to clean and sanitize schools, food venues, municipal areas, parks, bus stops, Gas engine pressure washers are used to clean and the (main / most efficient) tool we use is an internal combustion powered pressure washer. There is no replacement for pressure washers on the horizon in an electrical unit. Beyond this, all of these companies, institutions, or organizations have crews working daily. The mandate of no internal combustion engines being considered would eliminate the jobs of nearly all of our staff. The level of cleanliness in outdoor areas will fall to dangerous levels if cleaning by pressure washer is eliminated.

We care deeply about a clean environment for both the health of our neighbors and beauty of our community. (where applicable) We have participated in water recovery / water treatment as well as propane burner usage in accordance with all state and local regulations. Thank you for your consideration. Let's keep America Clean and Safe.

Subject: Please Delay the Deadline for Commercial Usage

Comment:

I am writing to you today as a landscape and garden professional. Landscape professionals work every day to take care of our nations green spaces, and we share Governor Newsom and other California policymakers desire to reduce carbon emissions from gas-powered equipment as quickly as is feasible. However, a two-year timeline is simply too fast a transition for commercial users and at this time is not technically feasible. The battery powered commercial-grade equipment on the market today is not yet ready for high-volume use it does not perform as well; the repair and maintenance infrastructure are not there; Californias energy grid may not be able to handle the increased loads, and industry companies would have to rewire and retrofit their buildings to add additional powerlines and charging stations at a significant cost.

Battery-powered landscape equipment is a good solution for many suburban and urban homeowners with small yards to maintain, but the equipment is not ready for high-volume professional use. It is less powerful, does not work as well on slopes and grades, and takes significantly more time to complete the same task as existing equipment. In California there are 55,000 landscape companies and 99% of them are small businesses. Many are minority owned and are not prepared to make this transition in only 2 years.

We support a responsible transition to zero emission equipment when the equipment is ready. However, currently, commercial battery-powered equipment has performance issues, cost issues, and infrastructure issues. According to its own data, the California Air Resource Board can allow a much longer timeline for commercial landscape companies to make the transition to battery equipment and still meet its emission goals without placing a financial burden on the 50,000 small landscape businesses in California. Because of this please delay implementation of this transition for commercial/professional grade equipment to 2026 or beyond.

Lastly, to assist a transition to ZEE there must be a robust rebate and tax incentive program put into place. We understand and acknowledge that the power of the purse is vested in the California Legislature, but we must highlight how concerned we are as an industry that our voices are not being heard. While we appreciate that the California Legislature approved \$30 million to support AB 1346 and this transition, that amount is woefully inadequate.

Based on the CSUF data published in CARBs ruling, if ALL that money went to ONLY commercial business (1,911,555) that would mean that only \$15 dollars would be provided per piece of equipment traded in. We are talking about investing 10s to 100s of thousands of dollars for each company to transition and \$15 does not come close to supporting the landscape industry and our majority small business demographic. This further highlight how a delayed

transition for commercial grade equipment will make this transition easier and less costly for all those involved. In conclusion, the landscape industry cares deeply for the environment. We genuinely want to support a transition to ZEE, and we believe that time is coming but not by 2024 for a complete transition. The landscape industry relies on this equipment to support their employees, customers and families and their concerns must be considered.

Subject: potential banning of gas-powered equipment

Comment:

If the ban takes effect, all of our customers would see higher costs. I know that humans cannot change the climate; it has always changed without our influence. Computer models are bogus, because there is no way to predict heat from the sun, wind currents, and air pressure. Plants need carbon dioxide for survival. Battery powered equipment needs lithium and a lot of other natural resources and energy to build them. These batteries can't be recycled. This state doesn't even have enough electricity for our present needs, electricity uses a lot of natural gas, oil and coal.

It is more efficient to just use gas. Small mowers and blowers can be OK with battery or power cords, but chain saws and large mowers probably can't. This potential ban is a very bad idea that won't do anything to "cool" the climate. Even if it does get warmer, why is the ideal temperature right now?

Subject: Support for California's transition to clean lawn care equipment

Comment:

Dear Chair Randolph and Members of the Board,

I am a California resident and I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

The use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to California's notoriously poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

892 premature deaths avoided

438 fewer emergency room visits for asthma

311 fewer hospitalizations for respiratory and cardiovascular issues

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

Please approve and amend the SORE regulations per the staff recommendation.

Thanks,

Louis Priven

Subject: No more gas powered leaf blowers!

Comment:

Gas powered leaf blowers are a scourge in my neighborhood! They are completely ruining any quality of life here. Everyday there is some property next to me operating a leaf blower. The noise is deafening and the stench of burning and unburnt fuel is sickening. It is not healthy or safe to be within a hundred feet of these machines. God knows what it is doing to the poor workers who use them. We need to completely get rid of fossil fuel leaf blowers and generators and require property owners to provide exterior power outlets for electric alternatives. There should be noise limitation standards also required for all new leaf blowers. Eventually blowers of any kind should be abolished since they kick up a cloud of toxic dust that drifts across the entire neighborhood. LA has a history of air pollution -- we need to continue to combat it at every level. Work on leaf vacuums (instead of blowers) and other alternatives must be promoted and supported.

Comment:

Dear ARB: Please quickly enact and begin enforcing rules to ban the sale of gas-powered gardening equipment such as lawnmowers and leaf blowers. In reality, the latter should more properly be called "dust blowers," because they are used year-round in our neighborhood and mainly blow particulates rather than leaves.

Our home on a cul-de-sac is surrounded by 7 other homes, almost all of which employ gardeners who use dust blowers every week. We hear them 6 days a week, and must constantly run to close our windows to keep out the gasoline exhaust fumes and dust.

I began my career as a health educator for an affiliate for the American Lung Association and later worked as an environmental planner (much of it in air quality). As such, I implore ARB to reduce the incidence of COPD in California by banning dust blowers.

Subject: Approve and amend SORE regulations
Comment:

Chair Randolph and Members of the Board,

I am a homeowner in Sunnyvale and I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024. Please approve and amend the SORE regulations per the staff recommendation.

As you know we are in a climate crisis. There is no room left in our carbon budget for polluting tools that have clean electric options in the market. As you also know, the use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and degrades California's air quality. California continues to fail to meet national air quality standards, which means that millions of Californians breathe unhealthy air everyday.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

892 premature deaths avoided

438 fewer emergency room visits for asthma

311 fewer hospitalizations for respiratory and cardiovascular issues

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

Thank you for taking action,
Sincerely,
Kristel Wickham

Subject: Support for California's transition to clean lawn care equipment

Comment:

Dear Chair Randolph and Members of the Board,

I live in Long Beach, California, in the crowded coastal neighborhood of Belmont Shore. Gas-powered leaf blowers and lawn equipment are used almost daily by hired gardeners (known colloquially as 'blow and mow' yard care workers)- and spread dangerous fumes, dust, and noise onto our home and property and throughout the neighborhood - causing health problems of many types.

I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024. This is an urgent need for the health of Californians.

The use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to California's notoriously poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

- \$8.8 billion in health insurance benefits through 2043

Dear Chair Randolph and Members of the Board,

There are many very hard steps we need to take to have an effect on climate control, but transitioning to cleaner lawn care equipment is one of the easier steps that should be taken ASAP. I live in California and support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024--or sooner, if possible, as this obvious change with its major positive benefits should have happened years ago.

The use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to California's notoriously poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

Subject: Comment for Notice of Public Hearing to Consider Proposed Amendments to the Small Off-Road

Comment:

"Small Off-Road Engines" can be a source of pollution and MUST be included as you limit emissions. As a nation, we must strive to go beyond "net zero" to ensure that we are not just eliminating greenhouse gases but also improving the quality of our clean energy supply. Small appliances and engines MUST be part of the solution, not continue to exacerbate the problem.

I urge CARB to enact stringent regulations to phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

I was glad to see that the California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. These sort of supports for small businesses are important as part of the efforts to clean up our air and environment.

We in SoCal and around the world appreciate the efforts to make our planet a healthier place and ensure a safe future for our grandkids.

Subject: Ban fossil fuel leafblowers
Comment:

Members of the Board:

Please ban fossil-fuel powered lawnmowers, leaf blowers, and similar equipment. We cannot continue to tolerate air & noise pollution, and associated health and social impacts, that come from use of this equipment. Fossil Fuel powered lawncare appliances produce inordinate amounts of pollution that can send users and their neighbors to the hospital, or worse. They also generate noise and dust that impact everyone and really impact neighborhoods.

We don't need fossil fuel powered lawn maintenance equipment. I grew up on the east coast in the 1970's and 1980's, with a yard that was large by northern California standards. We mowed our lawn with an electric mower and managed the leaves with rakes or electric leaf blowers. Electric mowers and blowers are more advanced and powerful now than they were decades ago -- and yards are smaller. There's really no need for fossil fuel engines for residential, corporate, or municipal yard maintenance.

Please ban fossil fuel powered yard maintenance equipment completely and quickly as possible.

Thank you
Jon Rosenfield

Dear CARB,
As you draft amendments to the Small Off-Road Engine Regulations:
Transition to Zero Emissions AND Public Availability of Additional
Documents and Information, make sure you use the science-based
evidence of the health benefits from zero emissions SORE:
\$8.8 billion in health insurance benefits through 2043
892 premature deaths avoided
438 fewer emergency room visits for asthma
311 fewer hospitalizations for respiratory and cardiovascular
issues.
These are large and important health benefits that make it
imperative to have strong rules for SORE.
Sincerely yours,
Clair Brown
Prof of Economics, UC Berkeley

Comment:

Please do the correct thing and address the issue of gardening equipment that uses gasoline and mixed fuel. Now is the time, not a year from now. This equipment is unhealthy for the environment and for the users. We need action taken now, not promises that are broken. If you are on this board then you should be promoting healthy air; if you aren't then get a different job like a lobbyist for the energy companies.

Sincerely,
Ron Parsons

Comment:

Dear members of the board,

I am writing to urge you to pass the proposed Small Off-Road Engine Regulation. Transitioning gas powered lawn mowers, leaf blowers and similar products to electric power will not only reduce CO2 emissions, it will improve air quality and benefit the health of all Californians. I'm sure I don't need to tell you this!

Thanks for your time, and best wishes,
David Arrivee

Subject: Please Delay the Deadline for Commercial Usage

Comment:

I am writing to you today as a landscape and garden professional. Landscape professionals work every day to take care of our nations green spaces, and we share Governor Newsom and other California policymakers desire to reduce carbon emissions from gas-powered equipment as quickly as is feasible. However, a two-year timeline is simply too fast a transition for commercial users and at this time is not technically feasible. The battery powered commercial-grade equipment on the market today is not yet ready for high-volume use it does not perform as well; the repair and maintenance infrastructure are not there; Californias energy grid may not be able to handle the increased loads, and industry companies would have to rewire and retrofit their buildings to add additional powerlines and charging stations at a significant cost.

Battery-powered landscape equipment is a good solution for many suburban and urban homeowners with small yards to maintain, but the equipment is not ready for high-volume professional use. It is less powerful, does not work as well on slopes and grades, and takes significantly more time to complete the same task as existing equipment. In California there are 55,000 landscape companies and 99% of them are small businesses. Many are minority owned and are not prepared to make this transition in only 2 years.

We support a responsible transition to zero emission equipment when the equipment is ready. However, currently, commercial battery-powered equipment has performance issues, cost issues, and infrastructure issues. According to its own data, the California Air Resource Board can allow a much longer timeline for commercial landscape companies to make the transition to battery equipment and still meet its emission goals without placing a financial burden on the 50,000 small landscape businesses in California. Because of this please delay implementation of this transition for commercial/professional grade equipment to 2026 or beyond.

Lastly, to assist a transition to ZEE there must be a robust rebate and tax incentive program put into place. We understand and acknowledge that the power of the purse is vested in the California Legislature, but we must highlight how concerned we are as an industry that our voices are not being heard. While we appreciate that the California Legislature approved \$30 million to support AB 1346 and this transition, that amount is woefully inadequate.

Based on the CSUF data published in CARBs ruling, if ALL that money went to ONLY commercial business (1,911,555) that would mean that only \$15 dollars would be provided per piece of equipment traded in. We are talking about investing 10s to 100s of thousands of dollars for each company to transition and \$15 does not come close to supporting the landscape industry and our majority small business demographic. This further highlight how a delayed

transition for commercial grade equipment will make this transition easier and less costly for all those involved. In conclusion, the landscape industry cares deeply for the environment. We genuinely want to support a transition to ZEE, and we believe that time is coming but not by 2024 for a complete transition. The landscape industry relies on this equipment to support their employees, customers and families and their concerns must be considered.

Comment:

Greetings,

It is time for the phase out of these small polluting and noisy devices. I have replaced my yard blower and chain saw with battery tools which work fine. I live rural so I use these tools a lot. I purchased extra batteries and told my gardener NOT to use his gas powered tools. He loves the yard blower.

We have to stop kicking the cans (issues) down the road for future generations to deal with. It is OUR responsibility and the time to address those responsibilities.

Comment:

The time has come to finally quickly phase out gas-powered blowers. We can no longer justify the huge amount of air pollution from them over the new battery-powered blowers. The pollution affects the health, immediate and long-term of all of us and should no longer be tolerated.

A secondary benefit of this change will be a huge improvement in noise pollution which will also improve our health and quality of life.

Subject: Support for California's transition to clean lawn care equipment

Comment:

I am a resident of Los Angeles, and want to express my full support for the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

I have personal experience of the polluting effects of old, poorly maintained gas-powered gardening equipment. On a daily basis in my neighborhood of Westchester, garden service providers come into the neighborhood and create a triple whammy of pollution from excessive noise, toxic air pollution caused by the equipment itself, and toxic air pollution caused by blowers that launch street level dirt into the air (including the heavy metals present on our hardscape surfaces). I'm sick of it in every sense and want this stopped.

The use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to California's notoriously poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

892 premature deaths avoided

438 fewer emergency room visits for asthma

311 fewer hospitalizations for respiratory and cardiovascular issues

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

We have an existing city ordinance that prohibits this gas-powered equipment. Isn't it time to enforce it?

Please approve and amend the SORE regulations per the staff recommendation.

Thank you,

Sam Butler

I strongly support banning gasoline-powered leaf blowers and other landscaping equipment. These devices are highly polluting and noisy and can be replaced by battery or line-powered equipment.

Many years ago the New York Times rightly described the gasoline-powered leaf blower and its noise, pollution and uselessness as the, "Gardening Machine From Hell".

It is now time to consign these machines to Hell, where they belong.

Subject: Stop The Sales of Polluting Gas Powered Yard Equipment As Soon As Possible

Comment:

Please stop the sale of gas powered, and highly polluting leaf blowers, and all other polluting gas powered yard equipment, as soon as possible. If it cannot be done until 2024, that will have to do.

I have been personally sickened (and therefore house-bound, at times) because of these terribly toxic, pollution spewing gas powered yard tools for decades now.

It is long overtime for CARB to ensure that gas powered yard equipment making companies switch permanently to selling only electric powered tools, in order to help ensure healthy air quality in our neighborhoods. This critical change needs to be final, and it needs to happen fast~ Our children's health, and overall community's welfare, depends on your decision.

Comment:

I was surprised to find out what a source of pollution gas leaf blowers have become and completely support a total ban on gas-powered blowers, which have been illegal in my small town of Ojai for a few years. They are also a source of noise pollution and remove one of the sources of regenerative agriculture--leaves.

Comment:

Dear Chair Randolph and Members of the Board,

I live in Sacramento and I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

The use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to Sacramento's poor air quality. And California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

Please approve and amend the SORE regulations per the staff recommendation.
Thanks, Jane Woehl

Comment:

Gasoline leaf blowers are an environmental disaster due to the huge amount of pollutants they emit into the air. Electric blowers would be a much better solution. The fumes and high-pitched noise of gas leaf blowers regularly cause people to close windows, be awoken from sleep, startle babies, and frighten pets. and that doesn't count the thin layer of dirt and dust that they kick up into the air that then drifts into homes, onto cars, or gets inhaled. Please outlaw these highly polluting small gas engines.

Subject: Polluting small off-road engines (SORE)

Comment:

Gas powered leaf blowers are a significant source of air pollution in the Los Angeles basin. One hour of operation from a commercial leaf blower emits the equivalent of driving a 2017 Camry 1100 miles. While walking in my neighborhood, I am assaulted by fumes from leaf blowers--like standing behind a dirty diesel gas bus. This pollution also impacts the health and safety of lower wage workers. Trade-in programs can be developed to mitigate the financial burden on landscape workers.

Phasing out the use of SORE quickly can have a significant benefit in improved air quality and reduced carbon emissions. This is low-hanging fruit in the battle to save our state from irreversible climate change. Ban SORE's!

Subject: zero emission SORES

Comment:

It's vital that California SORES transition to zero emissions to reduce air and noise pollution and to make the state safer and healthier for all.

Important too that for small businesses who are dependent on such engines (i.e. gardeners/landscapers, etc). a system of financial assistance be created to help reduce the cost of transitioning to zero emissions equipment.

Thank you for your consideration.

Subject: I support transitioning away from gas powered yard care equipment
Comment:

Dear Chair Randolph and Members of the Board,

I live in Merced in the Central Valley where asthma and other respiratory health problems are double what they are elsewhere in the state. Almost every family has one or more members who are impacted. Which is not to say other areas of California are not contesting with similar impacts of poor air quality as well. But you can see why my concern is so great.

Please support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

The use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to California's notoriously poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

892 premature deaths avoided

438 fewer emergency room visits for asthma

311 fewer hospitalizations for respiratory and cardiovascular issues

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

Please approve and amend the SORE regulations per the staff recommendation.

Thank you for considering this long overdue measure to improve our air quality.

Subject: Gas powered small engines - AB 1346

Comment:

I am writing in my role as a physician to urge you to do all you can to support AB 1346 and ban the sale of gas powered small engines as soon as possible.

The pollutants and toxins emitted from gas powered small engines is significant and is damaging our health. This pollution increases our risk of heart attack, stroke, lung disease, cancer, and miscarriage. As a pediatrician, the increase in premature birth, low birthweight babies, and birth defects is especially heart breaking.

The social cost of the problems these gas powered small engines cause is enormous. It includes medical costs due to increases in the above diseases, premature deaths, degradation of natural resources, decreased GDP, property damage from climate-induced floods, wildfires, and climate remediation.

As a physician, I am asking you to do what is best for Californians' health. We have solutions for a safer, cleaner, healthier future. Now all we need is the political will to do the right thing and help translate AB 1346 into reality to clean up the air we all breathe.

Sincerely,
Karina Maher, MD

Subject: Public Meeting: Transition to Zero Emissions
Comment:

Of the easiest things that can be done to lower emissions and transition to ZERO EMISSIONS ,one of the easier steps to be taken YOU can take for us, the citizens of California. You do not have to spend money to do this. You do not have to make money on this plan. YOU MUST PAY ATTENTION to the science involved in the CLIMATE CRISIS PROBLEM and offer the best options to the citizens of your state to make LIFE SURVIVABLE in the future and better now.It is my state and has been for the last 50 plus years. We have children, grand children and great grandchildren living in California and want for them the future of a NATURAL WORLD that does not threaten their lives and that will exist when they have children.

We take this problem seriously and ask you to take this proposal to make blowers of all sizes and descriptions that one can hold, push, carry or transport in some fashion ZERO EMISSIONS PRODUCTS.

This is a small action on your part and a small action that will make a BIG DIFFERENCE and something that we can all participate in and know that we have made a difference in literally "saving the Earth". All the small actions will add up to hope in peoples' hearts and something that MANY can participate in to really help not only their own neighborhoods, but their cities, states and countries.

Please take positive action toward the goal of ZERO EMISSIONS.

Comment:

Dear Chair Randolph and Members of the Board,

I am writing in support of new regulations to phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

These gas-powered forms of lawn equipment are horribly polluting and inefficient. Gas-powered leaf blowers and lawn mowers, in particular, have a huge effect on air quality, which in turn causes numerous health problems. We need to bring California air standards up to meet national air quality standards.

Please approve and amend the SORE regulations per the staff recommendation.

Thanks,
Janet De Lu

Comment:

I am a San Francisco resident and I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

As a retired firefighter I can appreciate the increase in public safety and public health from the reduction in the storage of gasoline and other petroleum fuels from the garages and sheds of California. I can also appreciate the reduction in burns and other injuries from the use of gas powered appliances.

Beyond the personal injuries and deaths, on a public health scale, the elimination of SOREs will improve the air quality in California. Do your best to act now, and reduce the magnitude of changes that will have to be enacted next year, next decade, next score of years, to prevent climate chaos.

thank you,

Jiro Yamamoto

Comment:

Dear Board Members;

I am writing to urge more stringent regulation of mowers, leaf blowers and other small off road engine emissions. I live on a busy street and with the exception of older vehicles and those modified with resonators and I assume bypassing the catalytic converters, the emissions are not as noticable as those from nearby lawn mowers, leaf blowers and the like. It is clear that this is a health hazard in my already poor air quality home. I strongly urge you to be bold in your decision making. It is indeed a matter of life and well being. Two acquaintances, with out a smoking history, have died of lung cancer in the last three years. Both were life long southern California residents. We have made progress but must continue on this trend. Lives depend on it and the decisions you make are a measure of personal integrity.

Thank you for your attention in this matter.

Sincerely,

Jay Jones

Landscapers are already barely making ends meet. its a tough competitive market and this proposed amendment to the small off-road engine regulations would put many out of business. California's electrical infrastructure cannot handle all the additional load of batteries charging every afternoon. Besides the cost of converting equipment inventory to battery powered, the cost of upkeep and maintenance would drive overhead up. Help keep small business alive.

Comment:

How many Leaf Blowers are there in California, and the Nation? I do not know, but the manufactures know! That would tell you how much GHG is added to the atmosphere.

What I do know is the amount is greater than it would be if they were banned. That alone would justify banning. But there is another reason as well. Think how much more quiet it would be if electric blowers were used? Rechargeable battery packs could be used instead of heavy gas blowers!

Subject: Please Delay the Deadline for Commercial Usage

Comment:

I am writing to you today as a landscape and garden professional and leader of a youth motorsport non profit organization. While I share Governor Newsom and other California policymakers desire to reduce carbon emissions from gas-powered equipment as quickly as is feasible, a two-year timeline is simply too fast a transition for commercial users and at this time is not technically feasible. The battery powered commercial-grade equipment on the market today is not yet ready for high-volume use it does not perform as well; the repair and maintenance infrastructure are not there; Californias energy grid may not be able to handle the increased loads, and industry companies would have to rewire and retrofit their buildings to add additional powerlines and charging stations at a significant cost. Battery-powered landscape equipment is a good solution for many suburban and urban homeowners with small yards to maintain, but the equipment is not ready for high-volume professional use. It is less powerful, does not work as well on slopes and grades, and takes significantly more time to complete the same task as existing equipment. In California there are 55,000 landscape companies and 99% of them are small businesses. Many are minority owned and are not prepared to make this transition in only 2 years.

We support a responsible transition to zero emission equipment when the equipment is ready. However, currently, commercial battery-powered equipment has performance issues, cost issues, and infrastructure issues. According to its own data, the California Air Resource Board can allow a much longer timeline for commercial landscape companies to make the transition to battery equipment and still meet its emission goals without placing a financial burden on the 50,000 small landscape businesses in California. I implore CARB to delay implementation of this transition for commercial/professional grade equipment to 2026 or beyond.

In addition, to assist a transition to ZEE there must be a robust rebate and tax incentive program put into place. We understand and acknowledge that the power of the purse is vested in the California Legislature, but we must highlight how concerned we are as an industry that our voices are not being heard. While we appreciate that the California Legislature approved \$30 million to support AB 1346 and this transition, that amount is woefully inadequate. Based on the CSUF data published in CARBs ruling, if ALL that money went to ONLY commercial business (1,911,555) that would mean that only \$15 dollars would be provided per piece of equipment traded in. We are talking about investing 10s to 100s of thousands of dollars for each company to transition and \$15 does not come close to supporting the landscape industry and our majority small business demographic. This further highlights how a delayed

transition for commercial grade equipment will make this transition easier and less costly for all those involved.

In conclusion, the landscape industry cares deeply for the environment. We genuinely want to support a transition to ZEE, and we believe that time is coming but not by 2024 for a complete transition. The landscape industry relies on this equipment to support their employees, customers and families and their concerns must be considered.

Regarding the youth motorsports, we utilize a small gas powered engine designed for lawn mowers that is recognized nationally, if we are unable to purchase/own/run these engines, then the sport will die out in California. Quarter midgets have been around since before World War II, Capitol Quarter Midget Association in California has operated a dirt track for quarter midgets since 1954, where Jeff Gordon raced. Please consider moving the date to help everyone adjust and reach the same goals.

Comment:

The state of California has restricted those of us that live here too much. So many restrictions and mandating that people are leaving the state in droves. Petroleum based vehicles and equipment are by far cheaper to run. We already experience rolling blackouts from a lack of clean electrical power. Banning gas power will further impact the states power grid. Politian's need to stop the stupidity now.

Subject: Support for California's transition to clean lawn care equipment

Comment:

To Chair Randolph and Members of the Board,

I am a resident of Southern California and I support the adoption of new regulations that will phase out the sale of gas-powered leaf blowers and lawn equipment in California beginning in 2024.

I understand the use of gas-powered leaf blowers and lawn mowers in particular causes health problems, and greatly contributes to California's poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

It's quite clear this regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

Please approve and amend the SORE regulations per the staff recommendation.

Thank you for your consideration.

David Griffith

Comment:

The use of gas-powered leaf blowers and lawn mowers can cause numerous health problems and contributes to poor air quality. California consistently fails to meet national air quality standards, which means millions of Californians breathe unhealthy air everyday.

California's communities and environment deserve better. To ensure that all communities have breathable air in the state, CARB must require 100% of the SOREs sold in California to be zero emission.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:
\$8.8 billion in health insurance benefits through 2043
892 premature deaths avoided
438 fewer emergency room visits for asthma
311 fewer hospitalizations for respiratory and cardiovascular issues

Subject: We Need Non-polluting Lawn and Garden Equipment

Comment:

Please stop the sale of gasoline-powered lawnmowers, leaf blowers, etc. They pollute the air and contribute to climate change. Also, I personally am sick of having to run and close all my windows when I hear gasoline-powered lawn and garden equipment nearby. I've been using an electric lawnmower for years. Other people can too.

Subject: Leafblowers-ugh!

Comment:

Dear Chair Randolph and Members of the Board, The proper things to say are below. What I want to say is that it is ludicrous that I hear the sound of blowers at work, at play, nap time , ALL THE TIME. I smell their dust and breathe the polluted air that is filled with particulate lead from the gutters, human sputum....contaminated?...stuff we should not be breathing. But worst of all, in this horrendous drought, the mulch and leaf cover are being removed from our soil, drying it out and causing more water to be used. This has to stop!

I am a California resident and I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

The use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to California's notoriously poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

892 premature deaths avoided

438 fewer emergency room visits for asthma

311 fewer hospitalizations for respiratory and cardiovascular issues

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

Please approve and amend the SORE regulations per the staff recommendation.

Subject: Leaf blowers stink up my neighborhood...

Comment:

Please ban polluting leaf blowers. I have to race around the house, slamming shut all the windows on a beautiful day, upstairs and downstairs, whenever one of those CO2-emitting monstrosities is in action. And it happens weekly, courtesy of my HOA, since they are in charge of the landscaping. There's nothing I can do to get them to use zero-emissions leaf blowers. Even with my race-around-the-house routine, I still get those noxious gas fumes inside the house. It takes forever to dissipate -- I can't even open the windows for a LOOOOOONG time afterwards, because the gasoline odor lingers. Please help. We need a law. Clean leaf blowers exist. Let's use them exclusively. Ban these polluting machines. We must do everything we can to slow global warming and keep our air clean.

Comment:

PLEASE outlaw those hideous, loud, disgusting polluting gas leaf blowers! Everytime I'm outside those nasty things are spewing out FILTHY gas fumes that I have to breathe. This is NOT okay. They are also obscenely LOUD, adding to noise pollution, then they blow their dirt all over the neighborhood into OTHER people's yards, on other people's cars, etc. I SWEEP my driveway - it doesn't take that long with the proper broom.

AND OUTLAW WOOD BURNING FIREPLACES. My neighbor's wood-burning fireplace spews dirty smoke into my kitchen window to pollute and dirty MY home. There are BILLIONS of people on this planet now and wood-burning fireplaces have NO place in our world!!

Subject: Unhealthy Emissions by leaf blowers and gas-powered mowers

Comment:

I have lived in California for 40 years and it is quite amazing that after all this time with all the regulations that have been passed on air quality during that time, that leaf blowers are still polluting the air in this state and causing noise pollution as well. This state is suppose to be at the forefront of clean energy and yet nothing has ever been done to curb leaf blowers and lawn mowers from their endless pollution in this state.

I moved from the midwest in 1981 to Orange County and one of the first things that I noticed was the noise and pollution of leaf blowers used by the gardeners every week. I had never seen leaf blowers before and here it is 2021 and nothing has changed. It is certainly time to curb them and have them powered by electricity.

Comment:

Dear Chair Randolph and Members of the Board,

I am a California resident and I support the adoption of new regulations that will phase out the sale of polluting (and noisy) gas-powered leaf blowers and lawn equipment in California.

This equipment contributes unnecessarily to California's air pollution.

Your own health benefit analysis determined that these new regulations, if adopted, would be most helpful.

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them buy replacement equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

Please approve and amend the SORE regulations per the staff recommendation.

Subject: Please ban gas powered leaf blowers

Comment:

Every weekday there's a gas-powered leaf blower blasting somewhere on my street. I'm so fed up with smelling the exhaust and hearing their drone out my window. Last August, even the week our skies turned black with ash and our AQI was over 400 with particulate pollution, the band of gardeners was out blasting a cloud of ash out of the gutter and back into the air. I felt so disgusted and defeated and I retreated to the room farthest from the street to try to hear my zoom lecture over the noise of the blower and my air purifier.

Gas-powered leaf blowers are a scourge on the environment- the fumes they emit along with the particulate pollution they cause are a major concern for public health as well as environmental safety. Particulate pollution is correlated with a number of negative health impacts including a number of cognitive disorders. The noise pollution they cause is a nuisance to humans in the area (with more people than ever working and schooling from home) but also for animals who rely on acoustic signaling to communicate. The noise level is a stressor for many species.

Thank you for your consideration of this matter

Dr. Kelly McCormick

Please consider a full ban on leaf blowers, but at a bare minimum, a ban on gas-powered leaf blowers.

Subject: All small off-road engines sold in CA should be zero emission.
Comment:

Dear California Air Resources Board (CARB),

Ensure that 100% of leaf blowers, lawn mowers, weed wackers and other "Small Off-Road Engines" (SOREs) sold in the state are zero emission.

Please pass the proposed Small Off-Road Engine Regulation to end the sale of polluting lawn and garden equipment.

Polluting smoke in air

Message CARB Now

The use of gas-powered leaf blowers and lawn mowers can cause numerous health problems and contributes to poor air quality. California consistently fails to meet national air quality standards, which means millions of Californians breathe unhealthy air everyday.

California's communities and environment deserve better. To ensure that all communities have breathable air in the state, CARB must require 100% of the SOREs sold in California to be zero emission.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

892 premature deaths avoided

438 fewer emergency room visits for asthma

311 fewer hospitalizations for respiratory and cardiovascular issues

Sincerely,
J. Barry Gurdin, Ph.D.

Subject: Leaves are called leaves because we're supposed to leave them

Comment:

We do need to just ban the sale of gas-powered leaf blowers asap, but we need a marketing campaign on behalf of a paradigm-breaking life cycle analysis of leaves. Add up the negative health impacts from the air pollution and noise, and the health benefits from pulling leaves with a rake or pushing them with a broom over to nearby trees or shrubs for mulch. We think CARB doing marketing campaigns to counteract the ridiculous think-alike habits and values promulgated by the marketers of stuff we don't need COULD measurably reduce GHGs. It could be a challenge campaign with other states and nations to see who can decrease the gas-powered leaf-blower population fastest.

Many municipalities already have long since banned these. Their sheer quantity adds up and degrades our quality of life. Let's leave the nation in banning these as well.

We need to stop allowing internal combustion engines in our environment.

They assault our hearing, our breathing, and also damage our Earth and water.

If we do not change now when will we?

We do not have the luxury of time, we need to act now for the very survival of life on this one and only home of ours.

Please make the positive changes we need.

No dollar amount can outweigh our environment.

Comment:

This is low-hanging fruit. Lawn mowers, weed whackers, and leaf blowers are used every day in our neighborhoods. They don't travel long distances, but they emit as much pollution as cars. There is no reason they cannot be all electric. Landscaping companies that use these tools all day can stock extra batteries and replace them throughout the day. Homeowners who use them occasionally can charge them at home.

Subject: New small engine regulations

Comment:

I am writing to you today as a concerned constituent in opposition to CARB's proposed rule to ban small engine powered equipment in California by 2024. These proposals, if enacted, would result in significant hardships for my small business, and my customers. Please submit these comments to the docket for the CARB SORE2021 rulemaking.

Moving forward with banning small engine powered equipment in 2024 would have numerous negative impacts on emergency responders, landscapers, outdoor power equipment dealers, and other businesses throughout the state of California, as well as their employees, and the various commercial, government and residential customers they service, at a time when local businesses are already reeling from the catastrophic effects of a global pandemic.

These proposals would drastically limit equipment choices for professional landscape contractors and outdoor power equipment dealers across California. We are small businesses who rely on small engine powered equipment every day as cost-efficient and high-performing solutions to install and maintain living landscapes and green spaces in communities throughout the state, and maintain our state's critical infrastructure. Equipment choices and supply are already limited due to worldwide supply chain disruptions caused by COVID-19, and we do not yet see any indications of recovery and return to normal supply and demand.

Battery powered technology is also not appropriate for all applications and all users. Many rural areas lack the infrastructure needed to charge, transport safely and recycle battery powered equipment - and this infrastructure will not exist at the scale necessary to meet the state's accelerated timelines. And, battery powered equipment is simply not a viable option for many critical services, like fuel mitigation, infrastructure/utilities maintenance and tree care and clearing services that depend on small engine-powered equipment to keep our citizens and infrastructure safe.

While I appreciate the efforts of legislators and CARB to address California's air quality needs, the small engine-powered equipment category is a comparatively minimal contributor to the state's emissions. Further, the living landscapes our equipment is used to install and maintain contribute to tangible environmental benefits, including reductions in the heat island effect, carbon sequestration, trapping dust and particulate matter, providing habitat for pollinators, and producing oxygen. Our gasoline powered

products are also needed to combat the catastrophic toll that fires and other natural disasters have taken on our environment and communities in California.

With this in mind, I respectfully request CARB postpone efforts to ban small engine powered equipment until cost and performance of and infrastructure for comparable electric powered equipment meet commercial, emergency, and rural residential use needs. A delay in implementation would allow the world's supply chain to recover from the worldwide pandemic that has disrupted production of all types of equipment - including both battery and gas powered; and would allow time to develop solutions for our critical infrastructure workers who require gas powered equipment for their services. In the meantime, I encourage CARB to work with equipment manufacturers to explore additional small engine emission reduction technologies that can be implemented in the near future.

Subject: Please Delay the Deadline for Commercial Usage

Comment:

I am writing to you today as a landscape and garden professional. Landscape professionals work every day to take care of our nations green spaces, and we share Governor Newsom and other California policymakers desire to reduce carbon emissions from gas-powered equipment as quickly as is feasible. However, a two-year timeline is simply too fast a transition for commercial users and at this time is not technically feasible. The battery powered commercial-grade equipment on the market today is not yet ready for high-volume use it does not perform as well; the repair and maintenance infrastructure are not there; Californias energy grid may not be able to handle the increased loads, and industry companies would have to rewire and retrofit their buildings to add additional powerlines and charging stations at a significant cost.

Battery-powered landscape equipment is a good solution for many suburban and urban homeowners with small yards to maintain, but the equipment is not ready for high-volume professional use. It is less powerful, does not work as well on slopes and grades, and takes significantly more time to complete the same task as existing equipment. In California there are 55,000 landscape companies and 99% of them are small businesses. Many are minority owned and are not prepared to make this transition in only 2 years.

We support a responsible transition to zero emission equipment when the equipment is ready. However, currently, commercial battery-powered equipment has performance issues, cost issues, and infrastructure issues. According to its own data, the California Air Resource Board can allow a much longer timeline for commercial landscape companies to make the transition to battery equipment and still meet its emission goals without placing a financial burden on the 50,000 small landscape businesses in California. Because of this please delay implementation of this transition for commercial/professional grade equipment to 2026 or beyond.

Lastly, to assist a transition to ZEE there must be a robust rebate and tax incentive program put into place. We understand and acknowledge that the power of the purse is vested in the California Legislature, but we must highlight how concerned we are as an industry that our voices are not being heard. While we appreciate that the California Legislature approved \$30 million to support AB 1346 and this transition, that amount is woefully inadequate.

Based on the CSUF data published in CARBs ruling, if ALL that money went to ONLY commercial business (1,911,555) that would mean that only \$15 dollars would be provided per piece of equipment traded in. We are talking about investing 10s to 100s of thousands of dollars for each company to transition and \$15 does not come close to supporting the landscape industry and our majority small business demographic. This further highlight how a delayed

transition for commercial grade equipment will make this transition easier and less costly for all those involved. In conclusion, the landscape industry cares deeply for the environment. We genuinely want to support a transition to ZEE, and we believe that time is coming but not by 2024 for a complete transition. The landscape industry relies on this equipment to support their employees, customers and families and their concerns must be considered.

Subject: In support of transition to zero-emissions lawn care equipment

Comment:

Dear Chair Randolph and Members of the Board,

I am a California resident and I support the adoption of new Small Off-Road Engine (SORE) regulations that will phase out the sale of highly-polluting, gas-powered leaf blowers and lawn equipment in California beginning in 2024.

The use of this equipment causes numerous health problems, and contributes to California's poor air quality. Because our state continues to fail to meet national air quality standards, we must do everything in our power to reduce the use of fossil fuels -- in engines large and small.

CARB's own public health benefit analysis determined that, in addition to saving billions on health insurance in the next two decades, these regulations will:

- prevent 892 premature deaths,
- reduce asthma-related emergency room visits by 438, and
- result in 311 fewer hospitalizations for respiratory and cardiovascular issues.

It is important that these regulations be introduced and enforced in a way that prevents small, proprietor-owned landscapers from being put out of business. To that end, the California Legislature has appropriated \$30 million for your agency to distribute to small proprietor landscapers to enable them to transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy-back programs already in effect under the auspices of air districts throughout the state. You must see that these subsidies and programs are effective and even handed so that no small landscaping business is harmed by the regulations.

The SORE regulations will improve air quality, improve human health, save lives, and slow climate change.

I, therefore, urge you to approve and amend the SORE regulations in accordance with the staff recommendation.

Thank you for your consideration of my comments.

Comment:

Changing from gas motors to electric motors is great.
one thing I notice the state is not opening new renewable energy
plants like the ones using wood biomass to generate electricity.
more electric cars more electric equipment great.
power outages and power roll outs on neighborhoods who is going to
be without electricity.
Is the state of California ready to step up and open new electric
plants or we have to rely on solar panels.
Even Tesla can make panels fast enough to keep up with the energy
demand.

Comment:

With a reasonable period to transition -2024- small engines which pollute so greatly should stop being sold in CA. Millions will remain in service for a number of years but will Wear Out as all gas engines do and should then be replaced with electric options. The sad reality is that we rich nations have put out the largest amount of Co2 and other greenhouse gases and MUST take action before our world becomes a hell! Economics of jobs using these engines may need some future tax incentives to help the transitions, instead of paying oil producers so many write-offs!

Comment:

Clerk of the Board

I realize the technology is evolving, but today there are many gas driven units that could easily be replaced by electric power. Leaf Blowers are an example. I own one and they work quite well as does my electric lawnmower and my electric hedge trimmer; and the list goes on.

As such, please consider phasing out small gas engines in our State. We would all benefit from it.

Thank you,

J S Wolfe

Subject: pass the proposed Small Off-Road Engine Regulation

Comment:

Dear Board Members -

As an East Oakland resident and environmental scientist, I have witnessed more air quality problems that anywhere else I have lived in the United States.

Ten years ago in the city of Charleston, South Carolina, we worked to create a trade-in incentive for local residents to turn in their gas-powered lawn equipment in exchange for credits to buy electric. This had a profound impact on our neighborhood air quality!

With the proposition of the SORE regulation, the Board has an opportunity to have an even greater impact on the air quality in our local communities. Please pass this regulation so we no longer have to close our windows and doors due to the toxic exhaust fumes of garden equipment polluting our homes!

Subject: Ban on Gas Powered Equip by 2024
Comment:

CARB-

As a landscape industry, we are in favor of moving more toward a sustainable, more environment friendly use of power equipment. As contractors, we clearly understand the important role we play and how our efforts to reduce gas emissions is critical to a long term solution in the fight against global warming. Where we differ is the 2024 timeline to make this abrupt and radical transition. The cost of gas vs. electric is extremely prohibitive for small contractors who make up the majority of businesses in this state. There also needs to be greater improvement in the technical development of electric equipment where it is of equal performance or better than current gas powered units. Its important to listen to all voices and bring all parties together to formulate a viable plan which is a win win for the State, Contractors and Manufacturers. Thank you.

Subject: Gas Powered Equipment Response

Comment:

I support eliminating gas powered equipment. Not only do they pollute our air quality, that equipment is a significant disruptor of peace and quiet for way beyond the clean up area. No one likes the sound and people nearby can't wait for it to be over quickly. The sound and air is also bad for the workers.

I know it will increase some costs in the short term for landscapers but the long term benefit for the neighborhoods and the planet is worth it. I've already spoken with HOA contractors that are currently upgrading methods and equipment because their large unit contractors won't allow them now.

Maintenance people in particular are often expected to hold to low pricing from years ago. I've found that customers still expect their below market pricing to continue indefinitely. The new standards will allow companies to update pricing in a way that customers can understand.

I'm a landscape designer, not a licensed contractor. I work full time with licensed contractors and also non licensed gardeners.

Subject: Gas blowers

Comment:

Great idea to eliminate them. They put out abundant air and noise pollution. From early morning to nights and weekends. I know it will be a burden for many, financially, to purchase electric blower systems. The prices are ridiculously high for electric systems that work through the day for larger landscape maintenance sites. But, transition to non-gas systems is crucial now to our environment, neighborhood peace and quiet and global warming.

Landscapers would be wise, if they can afford it, to lead and market themselves as true stewards of the environment. If grants or subsidies were available, then professionals and gardeners nationwide will transition faster. Plus, citizens should encourage this rapid transition. The payoffs in air quality, greatly improved peacefulness in neighborhoods and global warming will be profound.

Subject: Small Off-Road Engine Regulations -Lawn Equipment

Comment:

I support the ending of the sale and use of petroleum powered lawn equipment in California for several important reasons. One we are burning our forests down because of climate change driven extreme heat. The Caldor and Dixie fires are Exhibit 1 and 2. Second, the emissions from both petroleum by-products and PM 2.5 mobilized all summer and fall are the source of long terms adverse health effects. The epidemological evidence is persuasive and combined with seasonal fire smoke, are the source of early mortality. Mortality for the operators has become an environmental justice issue.

Finally there is noise and more noise with the clouds of road dust entrained by weekly gas fired lawn blowers. Climate change is killing our forests and the toxic dust is harming us. Please act in the public interest. Thank you s/ Harold M. Thomas

Subject: Reasonable Time Frame to Transistion

Comment:

While I may not be in CA, I work for a landscape contracting company that services a large portion of the state. Also many legislative items that CA does affects and tends to influence other states. With that said, we at BrightView and frankly most landscape contracting industry do care about the environment and are constantly finding ways to lower our impact. Many of us, including BrightView have already embraced alternative fuel machinery and electric. However given the entire industry has been using combustion engines that run of diesel, unleaded, and mix for well over a 100 years it will take time to retool our fleets, crews, business models, pricing to customers and vendors, and train our employees. The landscape contracting industry is open to moving to electric power sources. However we have to change how we setup our trucks in trailers in order to be able to store batteries, charging stations, solar panels, and buy all new equipment. We also have to stock new spare parts, tools, and re train mechanics. This is a very large investment to make. Also we need to analyze our costs and efficiencies with this equipment and make sure we are charging our customers accordingly otherwise we risk going out of business and putting more people out of work. All this items take a lot of time to analyze, organize, spend, and assemble to be able to continue to same level of service to our customers. In closing a 2 year deadline to make all the above happen is simply not possible. It does not make business sense nor industry sense to make that change that fast. Our vendors would not even be able to fulfill orders. Also with this fast deadline this will push companies to simply buy their products out of state, thus decreasing commerce and the economy within CA and putting an undue burden on the vendors out of state and that in turn will put a burden on the purchasers in those states. That in turn won't fix your problem. Give the industry a reasonable time frame to adjust, adapt, and evolve. Lastly many of the landscape contractors are not large multi million companies. Meaning they simply do not have the capitol to change their fleets over to fully electric either at all or in this timeframe. Please consider providing a more reasonable deadline. We landscape industry and the manufacturers of these products do welcome this change however just in a more organic reasonable time. Thank you.

Comment:

Working as a grounds men for the Kern High School District myself the idea of trying to get rid of the small gas engine is a horrible idea. Battery powered equipment is good for home owners not for commercial work. Longevity and the run time of the equipment is not even on the same level. I have done many demo's on battery powered equipment and this would be a big mistake if California decides to go this route.

Subject: two stroke engines

Comment:

Dear Sir/Madam,

I'm a landscape contractor who feels that two stroke engines should be quickly phased out. They are super polluters, are often poorly maintained, and I would assert not safely used by the majority of operators. All in all the cost of operating these machines is inexpensive only in the short run. I would urge you all to phase them out quickly and consider any programs in your power to create to help those who cannot afford safer and cleaner equipment.

Thank you,
Christie

Subject: Proposed Amendments to the Small Off-Road Engine Regs

Comment:

As a Landscape Architect, many of the landscape contractors that we work with have expressed to us that the proposed banning of gas powered engines of 25HP or less will have a crippling affect on their businesses. The proposed battery operated equipment is extremely expensive and require multiple batteries to power the equipment throughout the day. In addition, these batteries are not long lived, so they will ultimately end up in landfills contaminating ground water which California desperately needs to protect as a secondary backup water source during extreme drought situations. The financial impact of this bans will hurt businesses, their employees, families and their clients. We ask that this ban be postpone until long term sustainable solutions are developed. The technology is just not there yet.

Subject: electric vs gas

Comment:

Our town has banned gas powered small engines and the availability of electric substitutions has been good. We are using half gas and half electric now. The transition has been uncomfortable, but now the boys like the cleanliness of the electric machines. The power is not as strong and a combustion engine, but at least it is better than hand tools! We use mainly hand tools but on larger lawns and hedges a machine is great. The client just has to know that work will take a bit longer with hand tools, but most feel good not listening to loud 2 cycle engines outside their windows. Better, stronger machines are on the table now, our beloved machines will always be with us!

Subject: phase out gas leaf blowers and lawn mowers
Comment:

Dear Chair Randolph and Members of the Board,

I am a California resident and I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

The use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to California's notoriously poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians like myself breathe unhealthy air everyday.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

892 premature deaths avoided

438 fewer emergency room visits for asthma

311 fewer hospitalizations for respiratory and cardiovascular issues

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives.

Please approve and amend the SORE regulations per the staff recommendation.

Thanks,
Jill Dunham, PhD

Comment 410 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021) - 45 Day.

First Name: Suzanne

Last Name: Hume

Email Address: S@CleanEarth4Kids.org

Affiliation:

Subject: Please approve the changes to SORE regulations as recommended by staff

Comment:

Chair Randolph and Members of the Board,

CleanEarth4Kids.org supports the adoption of new regulations to phase out the sale of gas-powered leaf blowers, lawn mowers and other lawn equipment in California by 2024.

Please approve the changes to SORE regulations as recommended by staff.

According to CARB's own research, gas-powered equipment like leaf blowers and lawn mowers are a major source of air pollution:

*1 hour of a gas-powered mower puts out the same emissions as driving a 2017 Toyota Camry from Los Angeles to Las Vegas and 1 hour of the best-selling leaf blower is the same emissions as driving from Los Angeles to Denver

*Leaf blowers and other small gas engines will create more ozone pollution than all the passenger cars in California

Air pollution is linked to heart, lung and neurological conditions like dementia, Alzheimer's and Parkinson's. CARB must take action.

The public health benefit analysis by CARB shows these new regulations would result in:

*\$8.8 billion in health insurance savings through 2043

*892 premature deaths avoided

*438 fewer asthma related emergency room visits

*311 fewer hospitalizations from respiratory and cardiovascular issues

California has allocated \$30 million for CARB to help small landscapers transition to zero emission equipment. This is in addition to existing subsidies and buy back programs in air districts.

These regulations will improve air quality, help to slow the climate crisis, improve human health, and save lives. Please vote yes.

Thank you!

Suzanne M. Hume

Comment 420 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021) - 45 Day.

First Name: Kristine

Last Name: Henderson

Email Address: kristine@Gardenworks-Inc.com

Affiliation:

Subject: Please delay

Comment:

I urge you to delay implementation of this action to at least 2030.

As the Maintenance Department Manager for a licensed landscape contractor and small business, early (2024) implementation will cause economic hardship and potential loss of business. While these efforts are to be applauded, current replacement of small gas engines with battery power is not reliably viable with current technology and processes within the landscape industry.

Critique of this technology is as follows:

- charge capacity too small to run all day for large projects
- discharge rate anxiety by professional users (draw down time highly variable depending upon use and battery size)
- reduced battery lifespans due to constant or frequent use and constant recharging
- insufficient torque/power (i.e. more power = less run time)
- high price point to purchase
- high price point for replacement batteries
- no to little standardization in battery design
- issues with California's electrical grid including PSPS
- difficulty and or extra costs associated with the need for charging stations or carrying multiple extra batteries during workday
- supply chain issue challenges for foreseeable future
- repair issues - often more economical to throw away than repair

In general, the landscape industry is beginning to use some battery technologies such as portable power tools (drills, saws, chainsaws, small lawn mowers). The challenges listed above will lessen over the next 10 years as the technology improves and price points reduce. A two-year plan is too soon to avoid the issues above. If battery technology was equal to small gas engines in power and price, I can assure you, many landscape contractors would begin to make the switch.

PLEASE consider a delay until 2030.

Sincerely,
Kristine

Comment:

Hello,
Until there is an affordable and realistic option to this regulation, this will be a tremendous burden to the landscape industry. Although Battery operated equipment is available, it is not feasible to have workers swap out batteries throughout the day since this equipment batteries will not last 8 hours or more. Again, until there are options, this is a waste of time and money to continue this amendment.

Subject: Gas powered lawn equipment

Comment:

Gas powered mowers, edgers and "leaf" blowers should be completely banned. Phasing out sales of new equipment in 2024 will allow the continuation of this extremely LOUD and TOXIC ritual by those who already own these "tools". They fill our homes with toxic fumes, blow dirt and weeds everywhere and make horrendous noise. These deplorable so-called "yard tools" also significantly contribute to greenhouse gases. Roving yard crews should use rakes and brooms instead of polluting every neighborhood with their destructive "tools".

I urge you to ban them completely. Now in 2021.

Subject: Gas Powered Garden Equipment.

Comment:

First off would you be willing to pay two to three times more to have your landscape maintained? The cost to a landscape contractor would be enormous. Just the cost of battery equipment alone is two to three time higher than gas powered equipment just for the basic unit, battery and charger. They would still need to buy additional batteries and charger's because one battery wont last more than an 90 minutes. In addition they would need a way to charge the batteries in the field. There are not enough manufacture's out there that off an option to use the car ot truck battery. Which means they would have to use either a Generator (Which I understand is on the list of gas powered equipment to be banned). Or use electricity and the clients location to charge there batteries.

Please also keep in mind that if Landscapers would need to do clean up by using rakes instead of blowers, they would need to possibly double there staffing to get the job done in the same amount of time. This would increase the cost of the contractors operating expense's. Not just in employee slaveries but in Workers Compensation Insurance, additional vehicles and fuel cost.

Comment:

I am against the banning of small off road engines. I have been a California Licensed Landscape Contractor for 40+ years. Here are my objections;

1. The thousands of small gardeners & tree trimmers will eventually have thousands and thousands of battery equipment. All Lithium charged. And when those pieces of equipment go bad where do you think those defunct Lithium batteries will go?? Answer - straight into our landfills. That is a disaster!!!
2. This will cause work productivity to plummet. Thus landscape maintenance costs will sky rocket. Adding to added cost to Homeowners & HOA's = added inflation.
3. Hugh gas tax loss with no gas being purchased for thousands of equipment pieces. Where will this lost tax revenue for our highway repairs come from???

Subject: Ban gas powered yard tools

Comment:

I support banning gas powered yard tools, not only do they

Add to pollution, dust, weeds and noise pollution, they are also a health hazard for those using, in the case of leaf blowers they gasoline tanks strapped to their and spend all day walking around breathing in fumes. For the safety of those forced to try and earn a living maintaining yards we need to ban the unsafe practice of carrying gasoline on their backs.

Subject: Small engine ban

Comment:

As a small business owner, The ban of sale of small engines would be detrimental to our business. After doing rough calculations it would cost aroximaetely \$75,000 per maintenance truck to convert to all electric. With 5 maintenance trucks currently in operation that equals \$425,000. That doesn't include the cost to upgrade the pg&e service to our property and add additional electrical circuits to our shop to be able to handle the power needed to charge all the equipment. A study shows that there are over 2 million pieces of commercial equipment in the state of California and the proposed 30million in Grant money to replace them only equals 15 dollars per piece of equipment. That doesn't seem like an equal trade. To further speak on electrical california as a state is already maxing out our power grid.. this is the reason for pg&e planed power shut offs.. if all landscapers are charging our equipment that will put even more strain on our grid, what happens if we have a power shut off and can't charge our equipment?? The employees don't work or get paid?? The business can't charge the clients?? Sounds like a detriment to the economy. This ban also follows closely behind the new diesel laws outlawing older diesels weighing over 14 k gvw. We had to get rid of 2 trucks with just over 100k miles on them and replace them with equal viechles costing 65k each totalling 120k. Soon after the diesel laws changed we have the covid 19 pandemic. We lost some assccounts and some have switched to a partial maintenance program reducing our maintenance income. And on top of this we have payed out over 650 hours to pay employees who have either had covid or have been exposed to someone who has. I think the ban of gas equipment will be detrimental to not only our small business but the industry as a whole. We have had to over come a few large hurdles in the past 5 years we don't need another one. I feel if there is proper funding for direct replacement of equipment that will be the only way company's will be able to survive. I also find it interesting that the automobile wis given over 15 years to do research and development to eliminate the sale of gas viechles by 2035 but the landscape industry is only given 2 years? I strongly advise administration to think about the consequences before passing this law.

Comment:

Please require all landscaping businesses to switch to electric leaf blowers or brooms and rakes. The pollution from gasoline leaf blowers and lawn mowers is awful. Additionally the noise pollution is disturbing and goes on all day long every day. Our air quality in Southern California is horrible and a danger to everybody's health from kids to the elderly.

Subject: electric-powered lawn equipment better for gardeners and schools

Comment:

Dear Chair Randolph and Members of the Board,

Thank you for all you do. It must not be easy to oversee matters of air quality and have to balance competing interests. I hope the decision to phase out gas-powered lawn equipment is a relatively easy one to make: less air and noise pollution = healthier people.

As a teacher in a California public school, I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024. It makes sense both on a very personal level and for the health and well-being of everyone.

When the gardeners use their lawn-equipment during class, it's hard for me to project my voice over the din. It makes it harder for the kids to concentrate. On weekends, when I am looking forward to a well-deserved nap, the gardeners next door power up their machinery and rob me of the rest I need. Most importantly, by phasing out gas-powered equipment, you will be giving my students hope, tangible proof that the state is doing all it can to address the looming climate emergency. Indeed, I was stunned and dismayed when a student told me the other day I was the only person he knew who was taking any steps to address climate change!

Beyond how this issue impacts me and my students directly, the use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, and greatly contributes to California's notoriously poor air quality. California continues to fail to meet national air quality standards, which means that millions of Californians breathe unhealthy air everyday. That also means more cases of asthma and missed school days.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

\$8.8 billion in health insurance benefits through 2043

892 premature deaths avoided

438 fewer emergency room visits for asthma

311 fewer hospitalizations for respiratory and cardiovascular issues

The California Legislature also appropriated \$30 million for your agency to distribute to small proprietor landscapers to help them begin to acquire and transition to new, zero emission electric and manual equipment. This is in addition to subsidies and buy back programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives, and give some needed relief to educators who are already working so hard.

Please approve and amend the SORE regulations per the staff recommendation.

Thank you,

Isabelle Teraoka

I am a California resident and I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

These types of small engines produce a lot of greenhouse gasses. Better alternatives are available, and developments in both this field and others show that recommendations and gradual phase-outs are not effective. We need to ban the sale of this equipment immediately; it's too late to dilly-dally about climate change.

Financial subsidies provided by the state will help any small businesses that are hurt by rule changes. There are no more excuses.

Subject: No gas power equipment

Comment:

electrical equipment for the landscape is fine for homeowner but for commercial landscape side their is a great expense incurred for products that don't do as well as gas powered equipment . People banning gas power equipment have probably never been on a commercial landscape maintenance rout. Battery powered equipment have high cost to purchase and when battery is no longer useful replacment is almost as much of a cost as the original purchase. Battery equipment for large landscape maintenance is not yet economically smart at this point due to reduced power and cost compared to gas power equipment .

Subject: Banning gas-powered mowers

Comment:

Hi-

I just wanted to weigh in here. I've owned and operated Down to Earth Landscaping for 24 years now in the East Bay and I am a strong advocate for the environment and the health of our workers. While I agreed with the ban on gas leaf blowers because of its direct impact on workers health and the environment, most landscapers have not stopped using them. On any given day in an area that hires gardeners, I'll see most if not all gardeners are still using the banned equipment with no enforcement. We made the switch and it has been a challenge. The equipment requires constant maintenance because they're not made for commercial use (though their price tag is high as if they are), there are limited vendors who repair them and they require constant charging, limiting where and when they can be used.

I don't agree with a ban on gas mowers. While we have been reducing the amount of lawns we install, the ones that are out there growing still require cutting and battery and electric options aren't for commercial use. This will result in constant cost and headache for the companies who are following the rules while most gardeners who are not operating legally will continue to do things their way and the homeowners who hire them will continue to support them. Without enforcement, these bans are useless and enforcement would only create a further rift between those of us following the law and the vast majority who are being hired as gardeners who don't and won't.

Thanks for reading,
Jesica

Comment:

It is my opinion that small gas powered equipment should not be banned.

I am a partner of a small landscaping business with 7 employees. At the moment we focus on mostly landscape maintenance and we rely heavily on gas powered equipment like leaf blowers, weed eaters and hedge trimmer. Although we have started to try out the newer electric counter parts the tools are just not as reliable as gas powered. I feel the market is just not there yet to convert to full electric. This is not to mention that full electric tools are more expensive and have required more expensive repairs faster than gas powered equipment.

I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

While these regulations do not prohibit the use of polluting equipment, they do propose restricting the production of new equipment to sell or lease for use in the State of California beginning in 2024. This is a modest but important step to advance greater use of cleaner, healthier and quieter equipment.

As your agency's own research has found, the use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, greatly contributing to California's sad role as home to seven of the Top Ten most polluted cities in the nation. In fact, California risks losing future federal funding if we continue to fail to meet national air quality standards.

Comment:

Banning the sale of small gas engines up to 25hp in California 2024 for homeowners use is one thing but to do it to business owners who rely on small gas engines to forge out a living & to expect them to replace those engines with electric equipment is irresponsible & wrong to do that so soon. The reason for this is the technology is not there yet to make this practical & feasible. If by enacting this law in 2024 the outcome will eventually be catastrophic for many companies to stay in business. Until the technology is sound enough this law should be abolished until that can be proven.
Sincerely,
John M. Tornabene

Subject: Small engine ban

Comment:

Please reconsider the small engine ban scheduled for 2024. In a state that is already very difficult to operate a small business due to high taxes and other regulations this could be the final nail in the coffins for many small businesses that depend on these types of power equipment. The cost to convert to battery to accomplish the tasks that the small engines perform is staggering. The current technology only allows us to operate these electric powered tools for approximately 30 minutes. I'll need 16 battery packs per each power tool we use in order to work a shift.

Please stop the ban.

Steve Smith

Subject: Small Off-Road Engine Regulations

Comment:

We are very opposed to the Proposed Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions. This is not cost effective for commercial landscape care and will cost companies accounts and ability to continue to do business. The commercial electric/battery powered options are not effective, they take twice as much time to operate and the batteries do not last long enough to complete more than 1 job. Please do not pass this amendment.

In the cities where it is required we are following requirements and are having to increase cost of service as well as buy new batteries (which are terrible for the environment) constantly.

Subject: Zero Emissions on SORE

Comment:

MTA Distributors, LLC is a distributor of small lawn & garden equipment. The company serves a network of both manufacturers of small equipment and small retail businesses in California, such as hardware and lawn and garden stores. We supply these small businesses with Honda engines and dozens of different pieces of equipment powered by internal combustion engines.

While the proposed mandate of no internal combustion engines would negatively impact the lives of our 60 employees, we do not make this appeal primarily on our own company's behalf. Instead, we make it on behalf of the thousands of employees of our customers' businesses that we serve. Many of these Californians would be instantly unemployed by this legislature. Last year, we served 631 businesses in California, each employing anywhere from 2 to 40 people. At a conservative estimate, this would represent 2,500 Californians that we currently serve who would be unemployed by this policy. This is not even to consider the many employees served by our competitors. Moreover, this legislation will create new financial burdens for all Californian homeowners, and it would be most painful for the lower income households. A battery powered zero-turn mower costs 33% more than its gas-powered equivalent. This extra cost will be passed down from the landscaping companies that service low-income apartments straight through to the tenants.

Of course, we share your concern for protecting our environment. We all desire to care for the earth and work hard to build a sustainable future. In fact, MTA has even created an entirely new staff position for developing green energy. However, this legislation will not achieve the intended outcome of reducing ecological damage. In fact, the net effect of this dramatic legislation is actually worse for our environment. Any deeper look into the realities of increasing battery adoption will reveal that the energy equivalent of 100 barrels of oil is used to make a battery that can store the equivalent of one barrel of oil (M. Mills), meaning a move away from combustion engines could cause a 100-fold increase in energy consumption. Furthermore, it is demonstrated that "green" equipment requires ten times more material than fossil-fuel equivalents, and 500,000 pounds of ore must be mined in order to produce 1 battery for an electric car (M. Mills).

Please do not attempt a future and putative gain in human welfare at the expense of an immediate and certain loss of it. We feel strongly that a more thoughtful and more measured approaches to

alternative energy will better serve both humanity and our precious environment.

Comment:

I ask that CARB please help commercial landscape contractors with the implementation of going electric. This is a much needed change and for many good reasons.
However, there are a few problems with the the time line of said bill.
Having spoken directly with our distributors and manufacturers, there are few if any options available for electric/battery operated commercial equipment. Due to the lack of commercial equipment how would the Landscape industry implement a change over in such a short period of time?
I think a more reasonable transitional time period would be a good start.
The auto industry, for instance has many options available, however they do not have to comply until 2035.
I would suggest a phased in approach starting in the year 2028 which would also allow the technology to catch up with the needs of the commercial landscape contractor.
Then a complete target date of 2030 to change to electric.
In addition, incentives and tax credits should be made available since this would require a substantial investment by the entire industry.

Comment:

If this proposed legislation were adopted it would cause a tremendous financial hardship for landscape maintenance (gardening) professionals as well as construction professionals. Retooling and adjusting facilities to new charging requirements would put undue burden on business owners.

In addition to the financial implications, the legislation is discriminatory toward minorities (particularly hispanic). A large portion of the landscape and gardening industry is comprised of hispanic owners and workers and it is my position that this new legislation unfairly targets these minorities.

Equipment

Comment:

ATTN: Clerk of the Board
California Air Resources Board
1001 I Street
Sacramento, CA 95814

RE: Proposed Amendments to the Small Off-Road Engine Regulations:
Transition to Zero Emissions

To the California Air Resources Board:

Associated California Loggers is the trade association representing logging companies, log trucking companies, and log road building companies in California. Our members are at the forefront of fuels reduction, thinning, and biomass collection at a time when California has faced its two worst wildfire seasons in history.

This particular period of crisis in California history - with its terrible mix of loss of human life, wildfire carbon emissions, loss of animal life and species habitat, and the destruction of hundreds of homes and millions of acres of timberland - strikes as exactly the wrong time to be targeting chainsaws, water pumps and other "tools of the trade of wildfire prevention and suppression." Against the emissions produced by wildfire, the emissions reductions contemplated here strike as a comparatively small.

Moreover, we believe that the rule as proposed simply isn't workable, and that exemptions for specific pieces of equipment must be exempted from the Proposed Rule. Those specific pieces of equipment include large chainsaws, water pumps required during the conduct of forest management activities for the purpose of wildfire preparedness, portable pumps relied upon for drafting water to fill water trucks, off-road forestry equipment with water tank and pump for wildfire preparedness, and portable air compressors to service forestry equipment.

Associated California Loggers believes that our comments should be considered with an eye towards worker safety and wildfire preparedness. We have been working with the Governor's office on "workforce development" of a young and diverse workforce and we believe that it would be counterproductive for this important work to be rendered impossible to perform due to unrealistic "electric" engine requirements for wildfire work in the woods.

Thank you,

Eric Carleson
Executive Director
Associated California Loggers

Subject: In Support of NO MORE GASOLINE Leaf Blowers

Comment:

I am in full support of ending gasoline powered small engines especially leaf blowers and landscape equipment. Firstly, the emissions produced by those engines contribute to climate change and need to be put at a stop immediately. Every reduction of CO2 is important toward climate change solution, including by individuals, businesses and government.

Secondly, zero emissions alternatives already exist for landscape maintenance regardless of size. I suggest all landscape maintenance be performed with electric motors. Electric equipment can be employed for residential, commercial and even large municipal or park size work. For example, electric mowers (even ride on style) are better than gasoline mowers for park settings.

In addition, I would like motorized leaf blowers completely banned in the future for certain areas, such as residential and commercial, to stop the increase of airborne particulates. The use of leaf blowers causes pollutants, including road metals and urban bacteria, to become airborne, resulting in health and ecosystem impacts.

Subject: Ban for gas powered equipment

Comment:

The ban for gas powered machines would impact our operation a lot. Electric equipment is very loud too and it will take a lot longer to get a job done. We would have more complains from patients and visitors. The short last of charge means we have to buy a lot of very expensive batteries who run out quickly. More time to get a job done means to we need more people doing the same job in a certain amount of hours.

The disposal of batteries is not resolved ether.

No on the ban for batterie powered equipment!

First Name: Brandon

Last Name: Whitney

Email Address: brandon@psipproducts.com

Affiliation: Pressure Washer Dealer

Subject: Response to California AB-1346

Comment:

PSI is a small local business that has been an authorized dealer of industrial cleaning equipment for about 40 years.

We specialize in selling and repairing pressure washers and steam cleaners, 2 pieces of equipment that are targeted for removal from the market by AB1346.

This bill would without a doubt quickly put our company, as well as most of our customers, out of business. While we understand the idea behind the bill is valid and will lead to a reduction in pollution, it will also lead to the destruction of the cleaning industry as we know it. Schools, hospitals, food processing facilities, municipalities, sports facilities and more: all rely on the power of pressure washers and steam cleaners to clean effectively and thoroughly.

Currently there is no technology available to transition to battery-operated or electrical hot water pressure washers or steam cleaners. The batteries required to run our equipment do not exist, and the demand on the existing electrical grid to run our machinery would be overwhelming.

Also, the lithium batteries that would be required due to this bill would present an enormous expense to all of the industries currently using pressure washers and steam cleaners, and could present an additional problem for the environment. Disposing of these batteries could prove to be a bigger problem for the environment than our equipment does.

Please delay the implementation of this bill for industrial users of this equipment. The unintended consequences of this bill will be detrimental to not only the sellers of the equipment, but also the users. Landscapers, car detailers, building maintenance personnel, large venues personnel and many more will need to spend a great deal of money to comply or close their business.

Comment:

This legislation, to ban gas powered small engines, is entirely misguided and will cause great economic turmoil to many small businesses and homeowners. Replacements for these tools are not well developed, they are expensive, and dependent on batteries that expire rapidly. Where is the power to come from to charge all these batteries? Our grid is already overwhelmed at peak hours. This legislation is premature and completely irresponsible.

Subject: Notice of Public Hearing to Consider Proposed Amendments to the Small Off-Road
Engine Regu

Comment:

The banning of such equipment for large commercial operations, including municipality and utility tree trimming, would harshly affect the public's safety. Tree trimming is needed on large scales for municipalities to ensure safe travel for emergency vehicles and keep the public safe from falling trees and limbs. Tree trimming is also needed year-round to clear high voltage powerlines. Not clearing these lines will reduce the reliability of safe electricity to the public. It also poses electrical hazards that can cause injury or death. To limit the use to only battery-operated chainsaws to do this needed and regulated work is irrespirable by ARB. The industry does not have the necessary battery-operated chainsaws to do this work. The technology needed for large-scale tree operations does not exist. There will be an unburdened expense to contractors who will be passed to the taxpayers. A carve-out for these contractors must be given to continue operations of gas-powered equipment. ARB can achieve its goal by limiting homeowners of gas-powered equipment.

Comment:

Dear Air Resources Board:

Dear Air Resources Board,

This is going to be a very hardship for our small business. The reason is the technology is not ready to accommodate the way we operate. We have no outlet available to power and recharge the batteries as we are operating outside only and in remote areas where there is no outlet. It would not be very cost effective at all. We would need to buy a lot of batteries which is very costly.

We perform a lot of public works performing revegetation in remote areas and we need a generator to power our shovel to dig and trench. We need to do weed abatement and use our weedeater for hours. We would not have enough batteries to finish the job in a day or use our chainsaws. Our lawn mowers would not even last all day when we have to mow turf areas that have been repaired and reseeded for the school districts.

Thank you for your time.

Comment:

I am not completely opposed to this idea, but I disagree with it. The equipment for a lot of the tasks aren't well equipped, for example: Stump removal, or most Tree services in general, it isn't quite ready yet. They lack power and reliability on a variety of equipment and not to mention there is still not any options that I am aware of for a variety of chainsaws and pole saws. I also know that in many isolated situations where there is no access to alternative energy, gas is the only real reliable source to power this kind of equipment.

Subject: Small Off-Road Engines

Comment:

I want to encourage CARB to pass the regulation requiring that leaf blowers, lawn mowers, weed whackers and the like all be electric powered engines. Gasoline-powered engines emit vile pollution from fumes. They also are another source of gases that contribute to climate change. Finally they are tremendously noisy, causing another type of pollution that impacts our neighborhoods. The pollution from them causes more respiratory conditions, the chemicals in the exhaust could be carcinogenic and they only continue our dependence on fossil fuels. Now is the time to pass the regulation that all of these engines need to be electric. They are quieter, do not spew exhaust and allow us to decrease our use of fossil fuels.

Comment 481 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021) - 45 Day.

First Name: Alex

Last Name: Salazar

Email Address: alex@groundcareco.com

Affiliation: Business Owner

Subject: Small Off Road Engines for Commercial Use

Comment:

To CARB:

I am a third generation gardener. I, along with my brothers and my father, own a landscape maintenance contracting company in the Los Angeles area. To build our commercial gardening business has been both the most incredibly challenging and most rewarding professional endeavor.

I believe this new proposed regulation, while crafted with great intentions, parts of it are greatly mistaken and have the potential to bring incredible harm to small and what I imagine are predominately minority business owned enterprises.

We have experience using battery powered equipment. We purchased the commercial grade battery set available from STIHL. We also use 4 of their blowers combined with the AR 3000 backpack battery. This is the most powerful battery option available in the market today. In our experience this battery set up has a real run time of about 2 hours. This forces us to purchase more batteries if we want to perform the full day.

While a STIHL BR 500 (gas powered) blower costs about \$500, the commercial battery option costs about \$1500 plus another \$1000 for an extra battery pack. The battery option for the commercial gardener costs \$2500 minimum when the goal is full day performance. This price tag of 5x is an incredible burden. Not to mention the increased repair costs and decreased longevity of this option. I would encourage you to talk to lawn mower repair shops that are familiar with this such as Garvey Equipment in San Gabriel.

Another factor is increased labor due to more limited portability. If a job takes slightly longer due to battery run time concerns or we have to be swapping batteries this increases labor. Labor is another extreme challenge we face. There are no prospects of labor becoming more available or less expensive.

To finalize, I would plead to the CARB board to consider making some sort of exception for commercial enterprises. The use for us is not the same as it is for a homeowner.

This regulation for us is like handing us a weighted backpack while we attempt to hike. a steep hill.

Subject: Opposition to Proposed Rule

Comment:

I am writing in opposition to the proposed rule. I have over 30 years experience in the field of safety/emergency preparedness. The proposed rule is infeasible especially in the area of gasoline and diesel emergency generators which are critical during the frequent power outages California experiences. This will impact me both at home where I depend on an emergency generator for personal medical equipment during power outages and professionally as organizations depend on emergency generators for critical power needs during outages. All emergency generators should be exempt from this proposed regulation, period.

Other off road engine regulations proposed will force many small gardening services out of business due to the high cost of purchasing new electric equipment and multiple power packs. Costs for these services will increase.

Many organizations, farmers, and ranchers use off road gasoline vehicles routinely, this regulation will eliminate that valuable use forcing massive repurchasing and economic harm.

In addition, the elimination of multiple non-electric motors will cause further stress on an already overburdened California electric grid. With all the new electric cars in place, demand can't keep pace already.

This regulation needs to be scrapped due to its impracticality and high long-term economic burden.

Subject: SORE 2021 - Small Off Road Engine Regulations

Comment:

SORE 2021 will cause extreme hardships on people who depend upon generators during the power grid shutoffs. People need generators to refrigerate their medications, operate their medical equipment, and for heating and cooling during extreme temperatures. Electric chainsaws will not work for tree clearance during and after wildfires--they are underpowered and have short battery life. Cutting trees down before and during wildfires saves lives in preventing fire spread. Electric boat motors are inefficient and not compatible with the needs of emergency response, they will also leave people stranded in lakes, rivers, and oceans when the batteries expire. Electric batteries are detrimental to the environment, e.g., they leave toxic elements in landfills, the strip mining involved in procuring the materials for the batteries decimates the land, they catch fires that can't be extinguished.

Comment:

I agree that we should find a better solution than Gas powered small "Landscape" equipment to execute our work. However, I believe that in order for the execution to be successful more time will be needed to educate, train and implement across the Landscape Industry. The communication from State and local officials is poor in regards to explaining what the regulation actually means and how each individual and/or company can make sure to be compliant and prepare when the deadline rolls around. Most companies and individuals will not have the financial resources to prepare or set up their shop to support enough charging stations. I believe that state and local officials should immerse themselves with small to medium sized companies so they know exactly what challenges we will face and how they can help. Give us to 2028 to be inline with the phaseout of gas generators.

Subject: No more leaf blowers, please!
Comment:

Leaf blowers were the invention of a truly short-sighted individual. They are soul crushing and degrade everyone's quality of life.

For people who live in apartment complexes, like me, the leaf blower issue is particularly frustrating. As renters, we have no say in what happens with the landscaping, and are at the mercy of what the management deems to be appropriate. I also hear leaf blowers at work. I am a substitute teacher, and often hear them during school hours. Do children need to be exposed to these pollutants? Does instructional time need to be lost due to the noise? We cannot expect nature to constantly conform to our silly, unrealistic standards.

In a forest, leaves are considered beautiful. The thought of using a leaf blower there would be ridiculous. Why is it so different anywhere else?

The world has enough problems. Leaf blowers should not be one of them.

Sincerely,
Kristen Kessler

Subject: Dangerous small engine law

Comment:

Please consider adopting an exemption application protocol and policy for business that must utilize non altered emissions systems on small engines in hazardous life and death situations. The dive harvest commercial fishing industry utilizes small engines to power "Air Breathing compressors" in salty, humid, wet often very rough weather marine environments.

Implementation of strict emissions and exhaust controls or mandating battery powered small engines in the aforementioned conditions can quickly render them very unreliable and extremely dangerous during dive operations.

Please note: Compromises to performance with small engines in favor of emissions in hazardous conditions could lead to injury or death in some occupational fields such as in commercial fishing operations.

By banning or limiting accessibility of small engines in the State of California you would inadvertently force the use of inferior parts, aftermarket or illegal replacement units which again can unnecessarily put life in jeopardy in the event of failure.

SOME INDUSTRIES NEED TO BE EXEMPTED FROM THIS REGULATION/LAW.

Thank You for your consideration

Subject: Support for California's transition to clean lawn care equipment

Comment:

SOREs are very polluting, especially so for the operator.

In Napa County we have designed a pilot program to put battery powered leaf blowers into the hands of small proprietor yard care operators. The operators would provide input so the program best meets their needs. We need funding from CARB to get this started. It could then be expanded to serve as a template for a statewide program.

I am a California resident and I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

Subject: Small engines gas ban will be detrimental to our business

Comment:

To whom it may concern,

I would like to share my sincere concerns towards the proposed gas small engines ban. We are a commercial landscape business that has been in operations since 2006 and currently employs over 100 full time employee's. Having personally been in the landscape industry since 1998 I feel that I have gained the experience necessary to provide real insight on this matter. We have had a few small municipalities in our service area implement a gas powered small engines ban over the years. Fortunately those clients were not large properties, therefore there was not a lot of area to maintain. In an effort to continue to service those clients we invested in a small number of battery operated pieces of equipment, blowers and hedge trimmers. Unfortunately not all of our clients were willing to accept a surcharge for the necessary acquisition of new equipment. Therefore we had no choice but to absorb the cost. Prior to acquiring the equipment we were informed by the distributors/suppliers that there was nothing available on the market at the time that would be efficient enough to use on a competitive level when compared to the gas powered equipment. The amount of batteries required to operate the equipment for the hours which we require would make the initial investment alone more than 2.5x that of the gas powered equipment. The ROI in gas savings was well over 2 yrs. Another big hurdle for us has been the ability to charge the batteries while on a job in a reasonable amount of time along with short battery life. There will also inevitably be locations where charging the batteries onsite will not even be an option.

If there is a state wide ban, we will most certainly find ourselves in a position in which we will not be able to provide our larger clients the same level of service in the same duration of time. This will force us to renegotiate our service contracts at a higher rate to account for the necessary added service time. There is no guarantee that our clients will be willing to increase our fees, and in most cases will seek out less expensive alternatives. In essence creating a situation for cheaper competitors to take business away, that otherwise would not have existed. Without stating every single challenge the ban would impose on our business, I can truthfully say it will create a drastic negative impact to our business. I plead to those in power to genuinely consider the strain this will impose on businesses like ours that utilize such pieces of equipment. And to please wait until the technology has advanced to the point where the battery powered option is really viable. Thank you.

Please continue and accelerate the transition to zero emissions. I have been using all electric for yard equipment for years and have found no reason that gas powered are required. I use mixture or corded vs battery equipment. The cords took a little to get used to but no real issues certainly for vast majority of residential and a good number of commercial locations. Being home most of the time I know experience the smell as well as the noise pollution caused by the gas powered equipment used by homeowners and landscaping businesses. Very few locations have a large enough area that would require even non-corded equipment. Please give us all peace and quiet along with better air quality. Thanks for your support in this.

Subject: AB 1346 Implementation Schedule

Comment:

Members of the California Air Resources Board,
Ever since 1998, I have been advocating at the local level for a ban on gas-powered garden equipment. Initially the ideas fell on deaf ears. Over the years our community elected one city council member after another who held more sympathetic views. When they became the majority, gas-powered garden maintenance equipment was finally banned in the City of Ojai. It took just a short time for the professional landscape maintenance businesses to comply. The January 1, 2024 deadline stated in AB 1346 is a reasonable advance notification that would allow businesses and homeowners to comply. There are many reasons to stick to this schedule rather than extending the deadline, not least of which is the continuing damage to our air quality perpetrated by these carbon spewing machines.
Please do not delay the implementation schedule of AB 1346.
Thank you,
Sharon Cate
Ojai, CA.

Subject: CARB
Comment:

CARB's 2024 deadline on sales of gasoline-powered landscape equipment does not allow sufficient time for battery technology to develop a battery suitable for extended commercial use.

Permitting sales of gasoline-powered commercial grade landscape equipment until at least 2028 will allow further product development and improvement, reduce costs, and allow supply chain issues be solved.

Landscape use of small gas-powered equipment produces less than a quarter of the exhaust created by these types of engines in California. Homeowner use is by far a greater source of pollution.

I know that more regulation is not desirable, but perhaps during the period between 2024 and 2028 sales of small gas-powered landscape equipment could be limited to contractors that hold, at least, some sort of business license (or proof that they are running a legitimate business) with sales quantities limited by business volume.

Just a thought.

Subject: We Need Zero Emission Leaf Blowers Now -- Notice of Public Hearing to Consider
Proposed Am
Comment:

Monday, November 29, 2021

California Air Resources Board
1001 I Street
Sacramento, CA 95814

Subject: We Need Zero Emission Leaf Blowers Now -- Notice of Public
Hearing to Consider Proposed Amendments to the Small Off-Road
Engine Regulations: Transition to Zero Emissions AND Public
Availability of Additional Documents and Information

Dear Chair Randolph and Members of the California Air Resources
Board,

I am a California resident and I strongly support the adoption of
new regulations that will phase out the sale of highly-polluting
gas-powered leaf blowers and lawn equipment in California beginning
in 2024.

"A thing is right when it tends to preserve the integrity,
stability, and beauty of the biotic community. It is wrong when it
tends otherwise."
-- Aldo Leopold

The use of gas-powered leaf blowers and lawn mowers in particular
causes numerous health problems, and greatly contributes to
California's notoriously poor air quality. California continues to
fail to meet national air quality standards, which means that
millions of Californians like myself breathe unhealthy air every
day.

California Air Resources Board's public health benefit analysis
determined that these new regulations, if adopted, will result in:

- * \$8.8 billion in health insurance benefits through 2043
- * 892 premature deaths avoided
- * 438 fewer emergency room visits for asthma
- * 311 fewer hospitalizations for respiratory and cardiovascular
issues

The California Legislature also appropriated \$30 million for your
agency to distribute to small proprietor landscapers to help them
begin to acquire and transition to new, zero emission electric and

manual equipment. This is in addition to subsidies and buyback programs already led by air districts throughout the state.

This regulation will improve air quality, help to slow the climate crisis, improve human health, and save lives. Please approve and amend the Small Off-Road Engine regulations per the staff recommendation.

"The ultimate test of a moral society is the kind of world that it leaves to its children."
-- Dietrich Bonhoeffer

Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely,
Christopher Lish
San Rafael, CA

Subject: Ban on small gas powered engines

Comment:

I run a small Landscape Maintenance Business which has 50 employees. At current technology for electrical landscape maintenance equipment I would not be able to convert from gas power equipment to electrical equipment. I would need to have 200 batteries for blowers, 100 batteries for string trimmers, 100 batteries for string trimmers, 120 batteries for 21 inch mowers, 160 batteries for 36 inch mowers, 200 plus batteries for small generates, sprayers, rototiller, aerators, seeders, and other gas powered landscape equipment. I would also have to have backup batteries on hand when the batteries do not charge properly. I would have to have approximately 880 plus batteries fully charged on hand every day to perform my daily operation. I would need to build a special area to be able to charge and store these batteries. I would need to know what type of facility and cost to be able to charge that many batteries. I would need approximately \$750,000.00 to buy the electrical landscape maintenance equipment with todays technology to make the conversion. I would have to pass this cost on to may clients to stay in business. I would suggest gradually making the transition as technology and the power grid becomes available. Let start with on type of equipment and see how the transition goes before banning all gas power equipment

No wonder more and more people are leaving CA every day with ill conceived Bill's such as this. I live in rural California and use a gas powered chainsaw, gas powered line trimmer, gas powered lawn mower, gas powered ATVs, gas powered generators. They are not going to save the planet by banning the sale of gas powered small engines. This is simply a "feel good" bill to appease the far left environmentalist Wackos. Lithium for batteries is mined using child slave labor. It takes fossil fuel to charge the batteries. If the batteries aren't recycled they will end up in landfills. What's next? Banning the import of gas powered small engines from out of state. Get a life and stop interfering with ours.
Sincerely,
Dennis French

Subject: Attaining Zero Emissions

Comment:

I am greatly concerned the State of California has taken measures for attaining Zero Emissions by the elimination of Small Off-Road Engines will likely have a negligible effect in the quality of air and at a great expense and detriment of California residents and businesses.

California HAS NOT demonstrated its ability to provide reliable electrical power. Currently blackouts and brownouts are a common occurrence throughout the state. Currently the source of electricity for California is dependent on 60% non-renewable energy. Logically, an increase in electrical demand would need to be derived from non-renewable energy such as coal and LPG. Hence, the employment of battery powered equipment will place greater demand on the fragile electrical grid which in turn will require a greater amount of non-renewable resources to generate the electricity. This is NOT creating a state of having Zero Emissions.

An environment impact for battery powered equipment has not been published. A published report documenting the environmental impact and cost of Lithium battery production from cradle to grave. How much non-renewable fossil fuel is required for the production, recycle and disposal of the Zero-Emission battery?

The Battery Powered Industry for outdoor powered equipment is in its early phase. The cost of Battery Powered Equipment is generally three times that of a gas powered equivalent and with a fraction amount of efficiency. For example, a common commercial backpack blower which costs \$500 with a blowing force of 32 Newtons can be substituted with a Battery Powered Blower for \$1600 having only 17 Newtons blowing force.

At best, the current available Battery Powered Equipment is suited for residential user. Only for a limited number of applications does a battery powered tool make sense for commercial applications.

For example, a tree arborist will employ the small battery powered chainsaw whilst high in a tree for safety reasons. The largest battery powered chainsaw can power a small 18" bar whereas the forestry and fire response requires bars twice size in length. In terms of equivalent chainsaw power, the largest battery powered chainsaw is roughly equivalent to a 30cc gas powered chainsaw. A gas powered chainsaw designed for a 36" bar requires at least an 80cc gas powered engine. Hence there is no suitable battery powered equipment for forestry or fire fighting gas powered equipment, and the list goes on.

From my perspective, California should not be banning gas powered outdoor equipment 1) until it has demonstrated the ability to provide reliable and affordable derived from Zero-Emission renewable energy; 2) until a fully documented environmental impact

report documents the employment of batteries for powered equipment, from cradle to grave, will ultimately consume less non-renewable CO2 emitting energy; 3) without compliance with 1 & 2, at most the ban should apply to residential use only.
My Sincere Regards,
Darryl Braaksma

Subject: Opposition CARB SORE2021 - Proposed Amendments to the Small Off-Road Engine Regulations

Comment:

I am writing to you today as a concerned constituent in opposition to CARBs proposed rule to ban small engine powered equipment in California by 2024. These proposals, if enacted, would result in significant hardships for my small business, and my customers. Please submit these comments to the docket for the CARB SORE2021 rulemaking.

Moving forward with banning small engine powered equipment in 2024 would have numerous negative impacts on emergency responders, landscapers, outdoor power equipment dealers, and other businesses throughout the state of California, as well as their employees, and the various commercial, government and residential customers they service, at a time when local businesses are already reeling from the catastrophic effects of a global pandemic.

These proposals would drastically limit equipment choices for professional landscape contractors and outdoor power equipment dealers across California. We are small businesses who rely on small engine powered equipment every day as cost-efficient and high-performing solutions to install and maintain living landscapes and green spaces in communities throughout the state, and maintain our states critical infrastructure. Equipment choices and supply are already limited due to worldwide supply chain disruptions caused by COVID-19, and we do not yet see any indications of recovery and return to normal supply and demand.

Battery powered technology is also not appropriate for all applications and all users. Many rural areas lack the infrastructure needed to charge, transport safely and recycle battery powered equipment and this infrastructure will not exist at the scale necessary to meet the states accelerated timelines. And, battery powered equipment is simply not a viable option for many critical services, like fuel mitigation, infrastructure/utilities maintenance and tree care and clearing services that depend on small engine-powered equipment to keep our citizens and infrastructure safe.

While I appreciate the efforts of legislators and CARB to address Californias air quality needs, the small engine-powered equipment category is a comparatively minimal contributor to the states emissions. Further, the living landscapes our equipment is used to install and maintain contribute to tangible environmental benefits, including reductions in the heat island effect, carbon

sequestration, trapping dust and particulate matter, providing habitat for pollinators, and producing oxygen. Our gasoline powered products are also needed to combat the catastrophic toll that fires and other natural disasters have taken on our environment and communities in California.

With this in mind, I respectfully request CARB postpone efforts to ban small engine powered equipment until cost and performance of and infrastructure for comparable electric powered equipment meet commercial, emergency, and rural residential use needs. A delay in implementation would allow the worlds supply chain to recover from the worldwide pandemic that has disrupted production of all types of equipment including both battery and gas powered; and would allow time to develop solutions for our critical infrastructure workers who require gas powered equipment for their services. In the meantime, I encourage CARB to work with equipment manufacturers to explore additional small engine emission reduction technologies that can be implemented in the near future.

Subject: Notice of Public Hearing to Consider Proposed Amendments to the Small Off-Road
Engine Regu

Comment:

California Air Resources Board Members,
My name is Francisco Lesaca. My wife and I own and operate Lesaca Landscape Company, Inc. in Bakersfield, CA. We have 12 full time employees, which we are proud to say have been with us on average for 15 years. Our landscape services include design, build and maintenance. My father and mother started the business in 1974. We hope to continue what they started.

I have a deep concern for the new proposed amendments to the small off-road engine regulations and the time in which you want to implement them. I understand the need to reduce our carbon footprint. And being a lifelong resident of the central valley, I understand how important our air quality is to us. But to do a complete ban by 2024 of all gas engines under 25 hp will create a financial hardship for me and many small businesses owners. Every piece of small equipment I have is under 25 hp. Which include mowers, blowers, chainsaws, edgers, string trimmers, plate compactors, aerators, pressure washers, power brooms, augers and concrete saws. We take care of our equipment so it will last us a long time. We try to 3-10 years life out of every piece of equipment. And we only buy professional equipment that we know is dependable and can handle the riggers of our work. It's taken us years to find the right equipment that meets our standards. Now you are asking us to do the same thing with electric equipment in less than 3 years. This is a hard pill to swallow. Its not just the new equipment we will need to purchase. But the cost of setting up our shop, trucks and trailers with charging stations and even maybe solar panels. I don't know where to begin!!!

I hope you can reconsider this timeline of 3 years and extend it to 10+ years. By then, maybe the battery technology will be more advanced. Also, with more time the cost of the equipment may be more comparable to our current gas-powered equipment. If anything, the added time will help us phase out our old gas power equipment and purchase the new battery equipment.

Best Regards,

Javier Lesaca

Subject: SORE proposed amendments

Comment:

Although I am a Landscape Architect, I work closely with the green industry leaders, licensed landscape contractors who install and/or maintain residential, commercial and municipal properties. The amendment proposes banning gas-powered engines of 25HP or less and replacing them with very expensive batteries that are not capable of lasting throughout a work day, demanding multiple batteries for any private or public landscape maintenance company. These batteries are not recyclable needing assistance from the coal industry and will ultimately end up in landfills polluting our soils and contaminating our ground water. It is environmentally unethical and costly, specifically to be put in place by 2024. The CARB committee should extend the date until 2028 when this new battery powered devices can be manufactured and maintained effectively and economically so that existing landscapes can be properly maintained. Please also consider the economic impact the change to this new ruling to the owners and tax payers will be to properly make this change throughout California. Please consider the extention.

Subject: concerns regarding AB 1346

Comment:

To whom it may concern,

I am speaking as a sales manager for a distributor of high pressure washers located in Central California. I have many concerns regarding the passage of AB 1346 pertaining to the phasing out of the sale of small off-road engines, but I will provide comments on a few in particular. I am certain that the negative economic and water conservation impacts as well as the negative impact to the public health of the communities that we serve would greatly outweigh the perceived benefits of phasing out the sale of small off-road engines.

Socio-economic impact:

One of the biggest opportunities for aspiring entrepreneurs is to get into the pressure washing sanitation business due to the relatively low barriers to entry in terms of cost and the (currently) limitless opportunities and needs for sanitation. The majority of these businesses require small off-road engines to run their pressure washer equipment due to their portability and versatility. With the passage of this legislation, we are essentially eliminating tens of thousands of California jobs, many of which are held by minorities. This legislation would be very regressive and further expand the socio-economic gap.

Health impact:

Considering we are in the midst of a global pandemic which has already claimed over 750,000 American lives; I would think that protecting one of the key means of public sanitation would be a top priority. This legislation would cripple the efforts of our customers who provide commercial and public sanitation services.

Water conservation impact:

As we all know, we are in the middle of a drought in California. Pressure washers use less water than other cleaning methods, including a standard hose. While the water in a pressure washer spews out with greater force, it uses about 50% to 70% less water. A typical hose puts out between six to ten gallons per minute (GPM), while a conventional pressure washer uses between two and five GPM.

I have full faith in American innovation and I assume that there will be battery-powered pressure washers at some point in the future which will be able to replace existing small, off-road engine pressure washers, but the technology isn't available yet, and it almost certainly won't be available by January 2024. We need

to be strategic and ensure that we don't create a massive gap in our public health response, drive ourselves into a deeper hole with respect to the drought, and destroy the livelihood of tens of thousands of small businesses before we have a viable alternative technology for providing necessary sanitation services.

Thank you for your consideration.

Sincerely,
Byron Lafferty

Comment:

Dear CARB Board Members,

The National Association of Landscape Professionals (NALP) is the national trade organization representing the \$98 billion landscape industry employing over 1.4 million employees in the United States.

Member companies specialize in lawn care, landscape maintenance, tree care, irrigation and water management. Landscape professionals throughout the nation work daily performing essential services to homes and businesses to maintain their landscapes, sustain the environment and enhance and maintain healthy and safe green spaces.

We are writing to you on behalf of our member companies concerning Proposed Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions, Initial Statement of Reason (ISOR) published October 12, 2021. We are respectfully requesting you to support an amendment to the ISOR and delay implementation of the transition to Zero Emissions Equipment (ZEE) ONLY for commercial/professional grade small off-road engines (SORE).

Please see attached comments for complete explanation and supporting materials.

Subject: For Our Kids, Let's Ban Small Off-Road Engines Now

Comment:

I have been an elementary and middle school teacher in the Southern California for almost 25 years. More and more, I am getting concerned about the kind of world we adults will be leaving to the children I teach. Many of my students suffer from asthma or other respiratory issues, and many are rightfully worried about emissions, climate change and environmental degradation. Now is the time to act to alter course and do much more to assure a better future for these kids. One way to start is by approving the rule to promote the use of zero-emission landscape equipment. Gas-powered landscape equipment, especially leaf blowers, are a noisy, dirty nuisance. My students and I cannot sit idly by while these terrible, high-polluting machines continue to assault our ears, our lungs, and our atmosphere. Perfectly good electric-powered substitutes exist. Many landscapers probably have the same concerns we do and will probably welcome the new rule. Please do the right thing and ban small off-road engines, and take a big step toward removing gas-powered leaf blowers from our lives. Thank you.

This CARB regulation will destroy 10's of thousands of businesses
jobs in California.

I an totally against this regulation. No wonder everybody is
leaving California.

**Comment 536 for Amendments to the Small Off-Road Engine Regulations:
Transition to Zero Emissions (sore2021) - 45 Day.**

First Name: Alan

Last Name: Bonifas

Email Address: all-spray@hotmail.com

Affiliation: CETA (Cleaning Equipment Trade Associati

Subject: Proposed amendments to sore regulations

Comment:

To the California Air Resources Board:

As a dealer of pressure cleaning equipment for over 37 years and the current president of CETA I appreciate the opportunity to submit comments on the proposed regulation and any possible amendments. I agree with the CARB board in their resolve to improve the air quality and reduce greenhouse gases. I also believe that small engines and their lack of emission control advancements have a detrimental effect to air quality. I also realize that ZEE tools are the direction of the future.

So while I agree on these things I also believe that the negative societal and economic impact from banning small engines on commercial (not residential) pressure washers will outweigh the incremental increase in air quality and reduced emissions. The main reason for this is that the technology for ZEE type industrial pressure washers is non existent and not feasible. Having experience in the pressure pump industry from a supplier standpoint I understand the torque and power requirements for industrial pressure washers and there is no feasible size or feasible cost for a battery powered industrial pressure washer. Most commercial pressure washing equipment uses 8 to 20 electric brake horsepower at full load to do their job. By jobs I am referring to graffiti abatement, cleaning city sidewalks and downtown areas, cleaning parks, cleaning and sanitizing playground equipment, cleaning invasive species off of boats, also many types of industrial and commercial and agricultural cleaning that are a necessity not a luxury or for aesthetic reasons.

So I propose that the board amend the regulation to exempt industrial pressure washing equipment with engines above 250CC until 2028 like generators or until feasible technology exists whichever comes sooner.

Respectfully submitted:

Al Bonifas, owner

ALLSPRAY 121 Main st. Swanton, Ohio 43558

Comment 537 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021) - 45 Day.

First Name: Brandon

Last Name: Whitney

Email Address: brandon@psiproductions.com

Affiliation: Pressure Washer dealer

Subject: Pressure washers and steam cleaners sanitize.

Comment:

PSI is a small local business that has been an authorized dealer of industrial cleaning equipment for about 40 years.

We specialize in selling and repairing pressure washers and steam cleaners, 2 pieces of equipment that are targeted for removal from the market by AB1346.

This bill would without a doubt quickly put our company, as well as most of our customers, out of business. While we understand the idea behind the bill is valid and will lead to a reduction in pollution, it will also lead to the destruction of the cleaning industry as we know it. Schools, hospitals, food processing facilities, municipalities, sports facilities and more: all rely on the power of pressure washers and steam cleaners to clean effectively and thoroughly.

Currently there is no technology available to transition to battery-operated or electrical hot water pressure washers or steam cleaners. The batteries required to run our equipment do not exist, and the demand on the existing electrical grid to run our machinery would be overwhelming.

Also, the lithium batteries that would be required due to this bill would present an enormous expense to all of the industries currently using pressure washers and steam cleaners, and could present an additional problem for the environment. Disposing of these batteries could prove to be a bigger problem for the environment than our equipment does.

Please delay the implementation of this bill for industrial users of this equipment. The unintended consequences of this bill will be detrimental to not only the sellers of the equipment, but also the users. Landscapers, car detailers, building maintenance personnel, large venues personnel and many more will need to spend a great deal of money to comply or close their business.

Subject: ban on small engines

Comment:

this proposal to ban all small gas engines under 25hp is dangerous and should never be passed. there is no alternative at this point. how can you provide cleaning service to the windmills that produce power? you cant pressure wash for 8 hours in the middle of the dessert at night without a gas generator. california doesnt have the power grid to run the citizens A/C units at home after 4pm without having grid shut downs. SDGE shuts down peoples power during high winds for days at a time how will rural counties keep food? i agree to regulate some but its not possible to do all.

Comment:

I am wrtiting today as a small business owner in opposition to AB1346. If this were to pass, I along with hundreds, if not thousands, of other small businesses throughtout CA would cease to exist. We are in the business of selling commercial pressure washers, which help keep our cities clean. We sell both gas powered and electric powered units and most of our clients (small businesses like us) opt for gas powereed units for obvious reasons. Electric powered units are no match compared to gas powered units. We are just not at a place where electric powered units will be as effective. Not to mention more water will have to be used, longer cleaning times, financial burden of purchasing all new equipment, multiple batteries required to complete a job, all existing users having to charge batteries every night and day, the toxic chemicals inside batteries (doesn't this also affect the environment?)etc. The loss of hundreds or thousands of small businesses will result in higher un-employment rates and higher rates of people on government assisted programs to get by due to loss of income. Please reconsider.

Sincerely,
Small CA Business Owner

Comment 543 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021) - 45 Day.

First Name: Greg
Last Name: Sprunk
Email Address: gregs@sceclean.com
Affiliation: Business Owner in SD

Subject: SORE2021 Regulations
Comment:

My name is Greg Sprunk and I am the President of Superior Cleaning Equipment. I have owned this company for 30 years. 25 years we have been in Southern CA in San Diego.

We sell and service pressure washers, aqueous parts washers, wash water recycling systems as well as service, parts and accessories for the above items.

We primarily deal with industrial cleaning equipment generally with 10HP to 25 HP engines. Those pressure washers are able to conserve water over a standard water hose, sometimes as much as 3-4 times.

It was inconceivable to me that much thought went into these regulations in regards to the industrial applications that they are going to be affecting. There is no battery technology that will allow a user to clean anything above 1500 psi at this current time. Pressure washers use a tremendous amount of energy but also conserve a great amount of water as mentioned above. Any outside surface that is currently being cleaned from your civic centers to restaurants to ships to boardwalks to hotels to entertainment venues such as Legoland, Sea World all use over 3000 psi. There are no replacements for that. A water hose is not going to cut it. Let me give you just one example out of 1000. Cleaning the hulls of military ships. Most contractors use 5000 psi or more. In order to power that you need to have a very large 460V highly charged cord which is not very safe and now you have the water factor as well. Ever try removing chewing gum from your driveway with a water hose? I guess you could get out there with a chisel but you still won't have a clean surface.

And it's not just pressure washers. With the issues facing California in regards to wildfires there are no chainsaws that run on battery power that are above 15 to 20 inches long. Nothing industrial. Are you expecting that the forest service wheels out a large diesel generator with about 20 extension cords to runoff into the forest to maintain the utility areas that are continuing to catch fire? Up in a tree with extension cords? So you've reduced emissions from the smaller chainsaws but now have a large diesel generator that is putting out as much if not more than the smaller units. And by the way the generators run the entire time. Gas powered chainsaws turn off and on.

it's easy to take a broad sweeping approach to an incredibly complicated issue that obviously has not had much research done in terms of how it will affect the cleanliness, safety and population

base in major areas. I don't have a problem with getting rid of smaller two-stroke engines where there's battery technology to be as equal or better. I have an electric battery powered blower for my home. I can use an electric powered pressure washer at 1500 psi to clean the outside of my house. For my small yard I can use a battery powered lawn mower. But that technology is not available to service large areas, parks for example.

And based on previous summers in California, you are now going to load up the infrastructure and in spite of rolling blackouts, now everybody's going to be charging their batteries on every single item mentioned above and that's not going to affect or increase the use of electricity? Which we already do not have enough of?

What's happening here is what has happened time and again. Legislation that is going to be on the backs of small business people, who make up the back bone and fabric of the communities are going to be the first ones to suffer. There are other options. Limiting horsepower under 5 for example. Taking a wade-in in approach instead of a plunge and see how technology can or will catch up.

A lot of people here talking about how small are gas powered blowers or lawnmowers are causing them a lot of distress and air pollution. And I sympathize with that. But the overreach here in terms of horsepower here is going to have a crippling affect on the small business cleaning, landscaping, services business that has not been thought through. And when you go to your local facilities and see somebody hand brushing with a bristle brush the venue, then using 8 to 10 gallons a minute from a water hose it's going to catch you that this might not be the best approach.

There's a better way to go about this, not the sledgehammer all encompassing, under 25 hp catastrophe that this is about to rain down on this great state. Let's make sure the technology can handle the regulation. At this time it cannot.

In the Pressure Washer Business we rely on a gas engines to provide quality & powerful equipment. In our experience with electric pressure washers they aren't effective for industrial, commercial & other vast application of other jobs. Plus a lot of the jobs pressure washer are used for are not near a power source. Our business is selling, maintaining & repairing pressure washers along with other cleaning equipment. Just since the start of this bill, things are negative of where businesses would go. Not only ours but our customers business's. We believe a delay or abolishment in implementing this bill would help a lot of small business stay in business & make the economy better.

Comment:

Dear CARB,

Thank you for giving us a platform to express our concerns. I've been in the pressure washer industry for 30-years, first building them then repairing them, teaching our dealer network how to repair them and now I sell them to our dealers in the NW territory. While most pressure washers we manufacture are between 5-horsepower and somewhere under 25-horsepower, I don't believe our industry will have a feasible non-emission alternative before January 2024.

These pressure washers (both hot and cold water) are used in many industries throughout my territory (including Northern California) for many applications. Some of the more notable uses which CARB and the state of California should take interest in are:

Invasive species (quagga / zebra muscle) decontamination to keep our waterways clean and invasive species free / Clean-up and sanitizing of dismantled homeless camps / Graffiti removal / Cleaning of equipment at farms and dairies to prevent cross-contamination / Environmental clean-up such as the efforts right now at Huntington Beach / General cleaning and sanitation of outdoor areas / Washing of solar panels to optimize output.

While these are just a few uses for pressure washers, I'm glad to have a chance to voice my thoughts.

Thank you,

Greg Cross, Nilfisk HPW

Subject: Stop the Madness on Pressure Washer Ban of Gas Engines

Comment:

I am an industrial supplier to commercial cleaning industry (pressure washers, floor scrubbers, detergents, sanitizers, disinfectants servicing (municipalities / office parks / retail /residential customers) in the greater Los Angeles area for the last 20 years.

I proudly come from the Anaheim community located in Orange and Riverside county. I employ 12 workers and we take great pride in the service we provide the community.

Within the last year, we partnered with County of Orange, CALTRANS, City of LA, multiple municipalities, food plants, construction companies, transportation, transit, etc, to provide

gas powered pressure washers to clean and sanitize everything from schools, food plants, transit buses, bus stops, homeless encampments, CalTrans vehicles, public property, and the most efficient tool we use is an internal combustion powered pressure washer. Beyond this we have x of crews working daily. The mandate of no internal combustion engines being considered would eliminate the jobs of nearly all of our staff.

We care deeply about a clean environment for both the health of our neighbors and beauty of our community. (where applicable) We have participated in water recovery / water treatment as well as propane burner usage in accordance with all state and local regulations.

Elimination of these cleaning devices will decrease public safety, decrease the ability to clean and sanitize, and keep California as the jewel of a state we all love. Banning these small engines eliminates any acceptable solution for portable pressure washing.

Thousands of cleaning companies, municipal staffs, transit workers, port workers, state employees will be left with no cleaning solution for hard to clean surfaces away from a major electrical source. There is no battery to run a pressure washer. That

technology may come some day, but in the meantime, you have put the horse behind the buggy. You are cutting off your nose to spite

yourself. Do you want excess dirt and bacteria filling the outside areas of restaurants? Do you want sidewalks crusted with spoiled

food and bacteria at public event centers such as a football or baseball stadium? Do you want the building you work at to have uncleaned entrances? Please, take a moment and ask yourself if this

is the right thing to do. You are creating a human health and economic crisis with this ruling. I beg you to use just a bit of common sense. It is easy to hand down decisions from the halls of government. Call your state agencies and municipalities. Call the

schools. Call the event centers. Call the universities. Call the churches. Ask if they can keep their employees, students, visitors, and fans safe without the gas powered pressure washer. I know the answer. Do you?

First Name: Casey

Last Name: Meelker

Email Address: cmeelker@hydrotek.us

Affiliation: Hydro Tek Systems Inc.

Subject: Benefits of SORE used on Commercial Pressure Washers

Comment:

Dear California Air Resources Board:

I write to you regarding the proposal to eliminate Small Off-Road Engines beginning January 1, 2024 and about the severe impact that it will have on various aspects of the lives of the citizens of our wonderful state. My wife and I we both born and raised in the beautiful state of California, and love raising our children here. I am employed by a company that manufactures pressure washers in Redlands, California. This manufacturing facility employs more than 50 people at this Redlands facility who build pressure washers and support this Californian manufacturing facility. These pressure washers are sold to distributors, many of which are Californian small businesses for whom a significant portion of their livelihood is made by reselling these gas powered pressure washers to local municipalities and Californian entrepreneurs who use this equipment to keep our communities safe and clean. This regulation of Small Off-Road Engines would effectively eliminate most of the pressure washing products and the services that we provide to our California customers which would impact our livelihoods as well as theirs.

A pressure washer is used in order to quickly and effectively clean and sanitize in a way no other product can. It is a highly effective piece of equipment that is ideal for a drought susceptible climate since it uses a fraction of the water used by a garden hose. If gas powered pressure washers are not available, there is no current available battery or electric technology to take its place. The other option of cleaning that will be employed will be with a garden hose which will lead to less effective cleaning and significantly more water wasted or in some cases not cleaning at all. One unique application of pressure washers is by using hot water. A hot water pressure washer is an industrial piece of equipment that is the core of our business. It is similar to using hot water for cleaning your dishes rather than just cold water. It quickly removes grease, oil, algae, road film and other grime. It cleans much faster and in many applications completely eliminates the need to use chemicals. If this product is not available then the alternative may be to try to use caustic chemicals to perform the same function which will have a detrimental effect to our environment. Also, there are some applications like gum and graffiti removal where a gas powered hot water pressure washer is the absolute best tool for the job. A hot water pressure washer can remove a piece of gum from the concrete in the matter of seconds where there is no other product that can do this as quickly and effectively. By having gas power, you can effectively clean anywhere including remote areas such as agricultural and construction sites.

The state and local municipalities use pressure washers to keep our state beautiful and safe. Almost every downtown and historic district is cleaned with pressure washers at night after street fairs and market nights. Our amusement parks, stadiums, schools where our children play are cleaned with gas powered pressure washers. Train, subway and bus stations are all cleaned with pressure washers. Hot water pressure washers are employed to clean and sanitize homeless encampments and prevent to spread of deadly diseases. Our state uses pressure washers to kill zebra and quagga mussle larvae in boats to prevent the spread of Aquatic Invasive Species from the Colorado River into our other lakes and streams which would harm the natural eco systems. Hot water pressure washers are employed for disaster cleanup after floods, fires, and oil spills.

Many of the systems that we make, help contractors and municipalities comply with the Clean Water Act by employing onboard generators to power a Recovery and Recycle systems. This system not only picks up the wash water preventing any contaminated wastewater from entering our streams, lakes, and oceans; it also recycles the water for reuse conserving even more water which is one of our states most precious natural resources.

Battery and electric power are currently not an option. We produce commercial/ industrial products that are not capable of being run on the standard power grid. The battery technology currently available is not a feasible or affordable option for this application of industrial/ commercial cleaning.

I ask you to please reconsider your decisions and to make commercial and industrial pressure washing equipment preempt from this proposal due to its heavy use by agriculture and construction industries that depend on it, as well as the various other essential cleaning tasks that I have explained. There are many unseen benefits that these small engine powered products contribute to our every day lives and the quality of life in keeping our beautiful state clean and safe.

Thank you very much for your consideration,
Casey Meelker

Although it is in all of our interests to do our part to replace the use of gas fueled landscape power equipment the timeline proposed to accomplish this is unrealistic for many reasons as follows:

- * We would need to install expensive charging equipment in our landscape yards.

- * All locations on our commercial accounts would need charging stations

- * The electric power equipment currently is not up to speed compared to our current equipment

- * The cost to replace our existing equipment within the proposed timeline would cost our company ten of thousands of dollars. We need more time

Comment 555 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021) - 45 Day.

First Name: David

Last Name: Wyett

Email Address: dave@alwaysunderpressure.com

Affiliation: Always Under Pressure

Subject: Response to California AB-1346

Comment:

Always Under Pressure is a small business in the Bay Area selling and servicing commercial power washing equipment. A large portion of our business is 13 - 25 horsepower gas engines powering 3000 - 4000 psi hot water, high pressure machines.

Some of this equipment goes to school districts, hospitals, construction companies, food processing equipment and facilities and many types of transportation including buses, trains, and airplanes. Most cities, counties, and districts, for example Golden Gate Bridge and BART use this equipment.

We also service the mobile cleaner industry. Some of these companies have as many as four or five wash crews that go out every weeknight and some of them hire and train the homeless and disadvantaged. They mostly work at night and the general public never sees them and are unaware of the work they do. They wash buildings, city sidewalks including urine and feces area where the homeless are living. They wash restaurant entries and walkways, garbage dumpster areas and many public spaces we all use.

While we understand the intent of reducing emissions, at this time there is no alternative equipment available to substitute for this type of cleaning.

The intent of this cleaning is to improve healthy living conditions and quality of life.

Check out these Bay Area news articles regarding the use of hot water pressure washers.

Comment 556 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021) - 45 Day.

First Name: Anthony
Last Name: DeRiggi
Email Address: tderiggi@msn.com
Affiliation:

Subject: I support sore2021 regulations
Comment:

As a physician concerned about air quality, I support the adoption of new regulations that will phase out the sale of highly-polluting gas-powered leaf blowers and lawn equipment in California beginning in 2024.

In addition to the pollution caused by the engine exhaust, blowers can create clouds of industrial pollutants, pollens, fertilizers, herbicides and pesticides, dried animal feces, dust and demolition debris such as lead and asbestos - further polluting the air we breathe.

While these regulations do not prohibit the use of existing polluting equipment, they do propose prohibiting the production of new equipment to sell or lease for use in the State of California beginning in 2024. This is a modest but important step to advance greater use of cleaner, healthier and quieter equipment.

As your agency's own research has found, the use of gas-powered leaf blowers and lawn mowers in particular causes numerous health problems, greatly contributing to California's sad role as home to seven of the Top Ten most polluted cities in the nation. In fact, California risks losing future federal funding if we continue to fail to meet national air quality standards.

CARB's public health benefit analysis determined that these new regulations, if adopted, will result in:

- \$8.8 billion in monetized health benefits through 2043
- 892 lives saved from premature deaths
- 438 fewer emergency room visits for asthma
- 311 fewer hospitalizations for respiratory and cardiovascular issues

The California Legislature has appropriated only \$30 million for your agency to distribute to small proprietor landscapers and help them begin to acquire and transition to new, zero emission electric and manual equipment. More funding will be needed. Funding also must be provided to support training programs to help landscapers switch to clean tools.

Please vote to approve and amend the SORE regulations per the staff recommendation.

Anthony DeRiggi, MD
Sacramento, CA

Comment:

My name is Jay Martinez, owner of JVM Landscape Construction, Inc. in Sacramento, CA. We are a small business, with full-time employees, serving the greater Sacramento area. We primarily are a landscape design and build company, specializing in residential homes.

In reference concerning Proposed Amendments to the Small Off-Road Engine Regulations, Transition to Zero Emissions, Initial Statement of Reason (ISOR) (published October 12, 2021) I would like to humbly ask for your support, to support an amendment to the ISOR, delaying implementation of the transition to Zero Emissions Equipment for commercial/professional grade small off-road engines until model year 2028 or later. As a Small business owner, use of the small engines in questions are crucial to our operations.

This proposed ruling would hurt our staff, to perform essentially duties on the jobsite in a safe and effective manner. This ruling stands to hurt small business owners of color, and employees of color the most as it stands. I know this first hand as a practitioner, and a veteran of the landscape industry for several decades. The additional time would be much needed to allow professionals to further acclimate to an environment better suited and tailored to transition to all electric ZEE.

Thank you for your consideration. Feel free to reach out to me anytime for more information.

Jay Martinez
President
JVM Landscape Construction, Inc.

Subject: Opposition to Banning RV Generators

Comment:

Generators in RVs are not often used, but critical when needed; and the available alternatives to address an RV's need for a generator are much less effective, use more fuel, and cause more pollution than using a generator.

In our 15 years of traveling with an RV, we've only used our generator 6 times, each time for an emergency where our health was at risk, be it when evacuating from the terrible smoke and fires in the SF Bay Area in 2020 (where my wife's compromised lungs needed continuous 110 powered air filtration and a nebulizer and thick clouds cut down our solar panel's ability to keep up), or during snap heat or cold spells while camping off-grid. We support clean air regulations, power our home and RVs with solar panels and back up batteries, and strive to be energy efficient. But there are times when generator power is absolutely necessary in our RV. We don't have a second home. Our RV is our second home on wheels. Why should that home be denied back-up generator power like all other homes?

Attached is our 2-page testimony which includes more detail on the above summary.

Thank You, Roger and Marian Taylor

Subject: Information provided by CLCA at the request of Dr. Pacheco-Werner

Comment:

See Attached (and/or below). Uploaded by CoTB

- Information on the constituent size of Contractors State License Board C-27 licensed landscape contractors

As of 4:00 p.m. today, California has 11,424 active licensed C-27 landscape contractors. There are other C-27 license holders who currently have their license in "inactive" status, meaning that they cannot currently contract at this time.

- Information on the constituent size of sole-proprietor gardeners and income estimates

According to the Bureau of Labor Statistics

(<https://www.bls.gov/oes/current/oes373011.htm>) the average income for a landscape worker is under \$40,000. The exact number of sole-proprietor gardeners, who are overwhelmingly latino, is harder to establish as they do not have to hold a C-27 license and many do not even have local business licenses. A recent article from CalMatters puts the estimated number of sole-proprietor gardeners at 60,000.

(<https://calmatters.org/california-divide/2021/11/a-50-coupon-for-one-tool-gardeners-call-californias-subsidy-inadequate/>)

- Calculation on funds needed if licensed landscape contractors and sole-proprietor gardeners were to have ZEE transition funding under the San Joaquin Valley Air District funding model

As we discussed, if the San Joaquin Valley Air District's commercial Clean Green Yard Machines funding limits (\$25,000 per applicant) were applied to the C-27 landscape contractors and unlicensed sole-proprietor gardeners that would necessitate \$1,785,600,000.00 in assistance funds.

Subject: how to ban leafblowers - we need conversations

Comment:

For several years I have tabled at the Sunday morning farmers market in Sacramento under the freeway near Southside Park, advocating banning leafblowers, especially gas-powered blowers.

I have encountered both resistance and support. The first Sunday I ever tabled about this, a guy came up to me and announced that he owned the biggest lawn care company in Sacramento, and that what I was proposing would never work.

He proceeded to tell me a story about a client, a lawyer who one day while working on a brief was rudely interrupted by a gas-powered leafblower. The lawyer called the company and said, "Get rid of the damn leafblower."

Okay.

A month went by and the lawyer's wife got the bill, and called the company saying, "Use the damn leafblower."

Then Mr. Landscaper Company said to me "See! It will never work!

And I said, "What I am seeing is that nobody sat down and had a conversation about what they wanted, what they were willing to pay, and what they were willing to do."

Oh.

And I see that such conversations are still not happening. We are overdue....

Subject: Mobile Power Generation Safety Concerns

Comment:

SORE considerations

On board power generation provides power for air conditioners in the event of a power disruption for pets left in RV's. Batteries will not supply the power required to run an air conditioner. A vehicles temperature can rise fairly quickly and a pet left in a recreational vehicle that loses utility power would be at a great risk. Have you considered the risk of a power loss to life safety equipment used by elderly or at risk travelers in a RV. Additionally, on board power generation is used in first responder vehicles.

I am familiar with a MRI mobile treatment vehicle that has saved stroke victims and would not be operable without a mobile generator.

These are not 'portable generators' and I disagree with any ban of mobile generators for 2022.

Subject: support ZEE for safe breathing spaces

Comment:

My family purchased a battery electric leaf blower and lawnmower over 10 years ago. We prefer ZEE to SORE for many reasons; they are quieter, cleaner, safer and more convenient. The smell and toxic fumes we are forced to breathe when SORE is operated in and around my family is unavoidable and unfair. My family (including my autistic son) does not obtain any financial benefit from the operation of SORE--only harm.

My neighbors pay only \$25 a month for a "mow and blow" crew. This seems way to cheap; I think they could pay more. Additionally, I can't imagine how landscape crew members must feel after breathing SORE toxic fumes day-in and day-out. This is a serious environmental justice issue! We are sincerely hoping this transition happens faster than designed. You have my support!!!

Comment 13 for Amendments to the Small Off-Road Engine Regulations: Transition to Zero Emissions (sore2021). (At Hearing)

First Name: Alan

Last Name: Metzger

Email Address: alanm@walker.com

Affiliation: Walker Distributing Company

Subject: ZEE Limitations on Large Zero-Turn Mowers

Comment:

I am the GM of distribution for Walker Distributing, based in Colorado. I wanted to point out one of the current limitations of batteries for large equipment - specifically the duty cycle requirements for landscapers using zero-turn mowers.

The typical all-electric ZT mower today (see the Greenworks GZ series) will offer about 1.75 hours of use at full speed, and then they will require as much as 12 hours to recharge. The battery is so large that it does not allow user replacement on the fly. This simple configuration yields a predicted duty cycle of $1.75 / 13.75 = 12.7\%$. That is, a landscaper could use this mower for less than two hours and then would have to park it for up to 12 hours before using it again. To work straight through an 8-hour day, a landscaper would have to purchase five of these mowers. That is an unusually large burden on the typical landscaper.

Battery equipment that can be easily changed on the fly - like modular batteries for chain saws, trimmers, etc - is ready for the new policy. But for certain types of equipment, such as large items (like zero-turn mowers), the viable technology is still many years away. I ask that you consider exempting zero-turn mowers 17 horsepower and above from the regulations under AB 1346.

Thank you for your consideration.

Alan Metzger

Subject: Gas powered ban

Comment:

<p>Dear CARB</p>

<p>I am Trung Pham, owner of Single Cylinder Repair, Inc. I have been doing business as outdoor power equipment sale and repair for more than 23 years. I build my company out of sweat, dedication of hard work. The California has gone too extreme by banning all gas powered equipment. We need equipment to keep our garden, lots, parks and forest clean and prevent fire each year. I am not against technology but we are not getting there yet. The California decision has been driving businesses out from California. Even though California goes zero emission, China, India and other countries freely use coals and petroleum products and it will make no difference. I agree wholeheartedly that we need to protect the environment and keep our planet a place can be enjoyable for everyone but banning all the gas powered equipment is too extreme </p>

<p>Thank you </p>

Subject: Proposed Changes for engines in discussion

Comment:

<p>There are so many issues the way the ban of gas engines in discussion is being implemented. The OPE dealers in CA have been left out of the process. I invite our Bay Area Board Member to visit our store, please. All board members please visit a store near you. We welcome you. We have more knowledge and direct access to the affected Commercial Landscaper whether big or small all day long. That is our customer, we are not a Big Box Store. Staff have not given the Board the full picture with industry knowledge. For example the battery manufactured unit they are using for Commercial Mower comparison for pricing is NOT the unit the end user in California will be buying. We are now so low on inventory going into our high season for weed abatement and wild fire defense season which is March-July. All dealers in CA have a wait list for equipment, we received a call from So Cal looking for a specific model just yesterday. This leaves CA in a dire situation whether we are experiencing a drought or raining season. Supply will not be there with battery units when this time comes in 2024, I am very confident in that. Please start with residential rated units. This user can go to the Big Box Store and purchase an inexpensive throw away battery unit that will last a few years. Ease us into this regulation, give us a chance to change our business plan. Then implement one type of unit at a time for the commercial industry. It involves more than you realize. This gives us a chance to give feedback to manufactures on performance and changes needed per unit on this new product. We've had engineers from Japan out regarding gas units so they can see why the unit is not holding up under use and to make changes needed. We will need this process for the Commercial Industry. There is also a Tech. Service Department at each store that will be effected. Thank you for your consideration. </p>

Comment:

<p>Hello
CARB,</p>
<p><span style="font-size: 11.0pt; font-family: 'Segoe
UI',sans-serif; mso-fareast-font-family: DengXian;
mso-fareast-theme-font: minor-fareast; mso-ansi-language: EN-US;
mso-fareast-language: ZH-CN; mso-bidi-language: AR-SA;">The
approach to ban SORE by 2024 is very aggressive, for industries and
a public who is not prepared. The process will happen
organically in time as the technology improves and costs reduce.
 By removing emission credits in CA, engines above
CARB's emission standard would no longer be allowed. This
would reduce emissions while still giving the public clean
equipment while manufactures continue to develop ZEE. The
current supply chain has delayed the availability to develop ZEE
products. The current timeline is unobtainable for
manufacturers to develop ZEE by 2024 and current ZEE products will
not meet demand due supply chain issues. We ask CARB to take
gradual steps toward ZEE over 10 years.</p>
<p>Thank You,</p>
<p> </p>
<p>Mitch Domiingos</p>

<p>I would like to express my concern and disappointment with the upcoming ban on small gas powered equipment. The sale and repair of this equipment make up 15% of my business and will have a very negative effect on my business financially. Although battery powered equipment is becoming more powerful each year, it still has a long way to go to match and the power of gas equipment. I would like to see a delay to this ban until the industry has the equipment strong enough to do the jobs my customers need to do. The technology is not there yet. Don't handicap a industry while we wait for the technology to catch up. </p>

Comment:

<p>As a lawn and garden business owner and home owner in the city of Santa Rosa, CA I can tell you first hand of the implications that the laws you propose will have on fire danger and the countless people that may die in the next major fire from the decisions you will make. I have seen the devastation that a massive wildfire causes. I have had countless customers in my store crying as they think of the homes or family members that they lost due to fire. I do not oppose transitioning to cleaner outdoor power equipment but as a business owner I know that supply chain issues will guarantee that we will not have sufficient "green" equipment prior to Jan 1, 2024. Given the current global position I beg you to postpone implementation until supply chain issues subside. We live in an area with large open fields, acres and acres of trees and dry underbrush, a lack of water and no current battery powered solution to combat these conditions. Please consider that we don't all live in cities with concrete and asphalt surrounding us. If we can't properly maintain our open spaces then you the board may have to live with the lives lost based on your decision. Please understand that I want a clean environment for my children and I support a transition, I just know that during a global pandemic these goals are not realistic.</p>

Subject: AB 1346

Comment:

<p>Hello, </p>
<p>I am writing today as a small business owner in opposition to AB1346. We are 29 years established in the lawn and garden business and currently have 3 locations servicing all over CA. We are a full service shop and carry many brands of equipment servicing homeowners, landscapers and many government municipals and cemeteries. We currently sell gas and electric branded equipment. With the ban on these gas powered equipment we feel that our technology is not ready for this to come to a head in 2024. We will see an increase in unemployment due to some customers saying they will not make the change as needed, along with the consumers who are willing to make the change but not having the funds to do so. There will be more overhead all together; customers will need multiple batteries, reconfiguration of electrical outlets to withstand charging multiple batteries, solar panels being needed in some cases. There will be a need for greater and more extensive training for mechanics and consumers to learn this new expansion. All units with intergrated batteries are viewed as disposable and unrepairable and in turn will create more waste in our landfills. More waste means more emissions in other ways. Where is it going to stop? We strongly need to reconsider this ban and think about other impacts this will have on the economy. We are putting out one fire to end up with many more. We deeply care for the environment and going green, but again making this transition happen in less than two years is not enough time to get customers or ourselves ready. </p>

Subject: Inappropriate Implementation Timeline

Comment:

<p>To Whom It May Concern,</p>

<p>From a seasoned landscaper's perspective;</p>

<p>Overlooking the fact that the current technological status of battery operated landscape equipment is not yet satisfactory (to say the least), and is most definitely incomparable to the far superior gas powered equipment, the implementation timeline that is currently set is most definitely inappropriate. Here are a few reasons why;</p>

<p>* The massive demand for battery powered equipment that will be caused by this legislation will tax an already stressed supply chain network that will leave tradesmen without the necessary equipment that we need to get the job done. </p>

<p>* Heavy labor demand and limited supply have left our industry (and many others) in need of hard working men and women. Reducing efficiency during a time of labor shortages will only increase the demand for labor when there is already a problem with job vacancies. </p>

<p>* in an already unprecedented time of large-scale inflation, why does it make sense to rapidly force feed legislation that decreases efficiency and therefore heavily raises cost for goods and services to the residents of California?</p>

<p>* There is also the concern of the amount of infrastructure & training that will need to be upgraded in order to accommodate the storage, charging, and maintenance of the alternative equipment. This takes time to do.</p>

<p>In summary, professionals in the landscape industry strive to do the right thing and we certainly understand that carbon emissions need to be reduced, but the alternative technology's are not yet there to substitute out the high quality gas equipment. The industry needs a much more extended timeline in order to execute this without failures that will be felt state wide, by

ALL. </p>

<p> </p>

Comment:

<p class="MsoNormal" style="margin: 0in 0in 8pt; line-height: 15.6933px; font-size: 11pt; font-family: Calibri, sans-serif;">The industry from Manufactures to End Users are not ready for this drastic deadline. In the Bay Area most of the employees who work for a Commercial Landscape Company 5 days a week, work for themselves on the weekend. We are not going to be able to pass on the cost of battery equipment estimated at a realistic 300% increase to our customers. The subsidies are not going to be there forever. In the end a maintenance worker will lose their weekend job to homeowners who will decide to maintain their property on their own. Which happens in every economic downturn, which is looming around the corner. I'd like to know how the electric grid is going to be able to store enough energy to power all the batteries from this equipment to cars, when last I knew Californiapays Arizona to take the solar energy it cannot store on the current grid. Not to mention what will happen with the abundance of dead batteries from all this equipment. The state should maintain some sort of balance of gas, electric and battery equipment. Not excluding gas altogether.</p>

Comment:

```
<p dir="ltr" style="line-height: 1.38; margin-top: 0pt; margin-bottom: 0pt;"><span style="font-size: 11pt; font-family: Arial; color: #000000; background-color: transparent; font-weight: 400; font-style: normal; font-variant: normal; text-decoration: none; vertical-align: baseline; white-space: pre-wrap;">The state of California holds the fate of thousands of small businesses in the palm of their hands with this zero emission plan. Business owners rely heavily on the sale, repair and use of small engine equipment. This state cares deeply about pollution, which is abhorable, however the idea of a drastic zero emission plan on small engine equipment across the state is irresponsible. By doing so, it will crush retail and repair shops and small landscape businesses and affect the way cities, counties and the state will continue to tend to our parks and national forests. Have you considered how the ever growing wildfires in California will be fought against with a measly battery powered unit? Impossible.&nbsp;</span><span id="docs-internal-guid-24da2695-7fff-e98d-3122-cb106e14ab04"></span></p><p dir="ltr" style="line-height: 1.38; margin-top: 0pt; margin-bottom: 0pt;">&nbsp;</p><p dir="ltr" style="line-height: 1.38; margin-top: 0pt; margin-bottom: 0pt;"><span style="font-size: 11pt; font-family: Arial; color: #000000; background-color: transparent; font-weight: 400; font-style: normal; font-variant: normal; text-decoration: none; vertical-align: baseline; white-space: pre-wrap;">With the livelihoods of so many individuals and families at stake please, please think through your decision and consider those who will be forced to close their business. I beg you to ease into the zero emission future and consider all aspects. Please agree upon a transition that is appropriate and accommodating to all those involved.</span></p>

Comment:

<p>This is a crazy idea and the timeline to achieve this is not possible for the average business owner/operator. Small business and repair shops are going to be put out of business because they cant absorb the cost of replacing all the equipment with battery operated. Can California afford to lose more businesses? I just priced a battery operated STIHL weedeater and it was 100.00 more expensive than the gas version and it DID NOT include the charger or the batteries. I'm also curious how are we going to go about recycling lithium batteries that are going to go bad? They are extremely toxic and at this point we do not have a way to recycle them, do we just ignore the fact that most of the raw material for these batteries come from third world countries that are just being plundered for their rare earth elements. California has a hard enough time keeping the lights on and now you are suggesting we push everything towards zero emmision, how is this even feasibly possible? California is a dying state and this is only going to drive more people to leave because these laws are just insane. They make zero sense when it comes to the regular working class trying to make a living in a state thats already incredibly hard to live in if you dont make 150,000 plus a year.</p>

Comment:

<p>Banning small engines by 2035 is a dumb, dangerous proposition! We have had the big Creek Fire where people use gas powered generators for power; the elderly used them for the oxygen they rely on to keep them alive. I told our neighbor's gardeners that you wanted to ban their mowers and yard equipment. They said that's dumb because the electric ones are not very powerful, plus you have to deal with the cords. It will cost them more money to replace all of their equipment. Can't wait until they wake up to how destructive this progressive ideaology can be to their way of life! </p>
