Subject: Option for solar battery electric units

Comment:

I urge you to allow an option to replace diesel units with solar battery electric units.

These are becoming available commercially and are much cleaner than any diesel or gas powered units.

Sacramento, CA 95814

Re: Transport Refrigeration Units Rulemaking -- Support

Dear Board Members:

Coalition for Clean Air supports the Proposed Amendments to the Airborne Toxic Control Measure for In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets, and Facilities Where TRUs Operate that are on the agenda for your September 23 Board Hearing. These strengthening amendments to the current rule are important to reduce diesel particulate matter (PM) emissions and resulting health risk from diesel-powered TRUs.

The 2010 and 2011 amendments have not reduced emissions as much as expected, in large part because of growing sales of units with less than 25 horsepower engines. The proposed amendments would close that loophole and establish a transition to zero-emission engines for truck TRUs. This transition will reduce cancer risk to individual residents and off-site workers near facilities where TRUs operate, including those located in and near disadvantaged communities; improve air quality; provide GHG emission reductions (including the powerful short-lived climate pollutants hydrofluorocarbons and black carbon) needed to combat climate change; and reduce non-cancer health impacts such as premature deaths, hospital visits for cardiovascular and respiratory illnesses, and emergency room visits for asthma, especially in sensitive receptors including children, the elderly, and people with chronic heart or lung disease.

Because of these benefits, we urge the Board to vote for the amendments today and bring them back for final adoption as soon as possible. In addition, we urge you to quickly take the next step, which is to also move all trailer and other TRUs to zero-emission operation.

Respectfully,

Bill Magavern
Policy Director

Subject: Delegation of owner requirements to lessees when applicable

Comment:

We ask for edits to section 2477.12. Requirements for Lessors and Lessees to delegate owner requitements to lessees when applicable.

We ask for consistency across CARB rules with definitions that affect businesses that are regularly engaged in the trade or business of renting or leasing motor vehicles without drivers. The following statements from the Advanced Clean Fleet rule should be implemented in the Airborne Toxic Control Measure for In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets, and Facilities Where TRUs Operate

The ACF rules stipulates the following:

- B) For vehicles that are rented or leased from a business that is regularly engaged in the trade or business of renting or leasing motor vehicles without drivers, The owner shall be presumed to be the rental or leasing entity for purposes of compliance if:
 - a. The rental or lease agreement for the vehicle is for a period of less than one year; or
 - b. The rental or lease agreement for the vehicle is for a period of one year or longer, unless the terms of the rental or lease agreement or other equally reliable evidence identifies the party responsible for compliance with state laws for the vehicle to be the renting operator or lessee of the vehicle.

Why this matters?

There are immense challenges on the control of leased and rented vehicles outside of CA. If a vehicle that generally doesn't operate in CA but has one or two trips would be affected. Penske would have to change all the contracts to stipulate that entry in CA is prohibited, but that might still not stop entrance. If there was consistency across rules and the terms of the rental or lease agreement or other equally reliable evidence identifies the party responsible for compliance with state laws for the vehicle to be the renting operator or lessee of the vehicle it would be beneficial to all and encourage compliance.

Regulations that are not based on vehicle registration are much harder to implement and for this reason we ask for CARB to think how they can support fleets that have these challenges.
