Subject: VOTE NO on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Subject: VOTE NO on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Subject: VOTE NO on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, I understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While it is in question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, there isn't any known credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Comment:

I am writing to strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. Sufficient scientific information does not exist to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level. Such reductions are not reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Subject: Vote No on AB 32 Scoping Plan Burden on Housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. In fact I have heard that the Board is being asked by some to increase that target to a significantly higher number.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. There is really no scientific support to even justify greenhouse gas (GHG) reduction targets from passenger vehicles at the proposed 5 MMT level. Anything more than this is merely a negotiating posture but those with other agendas and ignore the potential economic consequences on the housing industry, the need for housing in the state and the related economic consequences that would occur.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders and their consultants have a vested interest in the success of SB 375 and AB 32. They also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Subject: AB32 Scoping  
Comment:

Please do not add to the already outrageous cost of new housing any more. The term "affordable housing" is already a joke. Cal ARB knows the industry has been weakened by the recent economic debacle. Please do not allow this group to kick an entire industry while they are down. This is not the time to be taking action that would reduce jobs in our already tenuous economic condition.

I am writing to express my deep concern over the proposed recommendation regarding the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Subject: Vote no on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Specifically, we understand that the Board is being asked to increase that target to something higher than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Subject: VOTE NO on AB32  
Comment:

Please strongly consider voting NO on AB32. I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals. I strongly urge you not to increase the Regional Transportation-Related Targets any further.

I represent the third generation of my family in the housing industry. Two of my sons represent the fourth. People in the housing industry are experienceing the most terrible loss of jobs since the Great Depression.

AB 32 would make it difficult and expensive to build new homes or commercial buildings. We already have a new requirement for "green" building to deal with that is slowing the housing sector even more.

Even if AB 32 would help the enviroment, which has not been proven, now is not the time to add another burden on the already struggeling housing sector.

Please vote no on AB 32.

Thank you.

I am writing as an engineering geologist to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, I understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

As a geologist, I have studied the geologic history of the earth including global plate tectonic events, ice ages, climate history and astronomical history. It is my strong opinion that global climate change cannot be altered by man to any significant degree. Man is arrogant to believe that such power is within his grasp. Therefore, it is absurd to mandate such policies with the global climate change excuse.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. Not only do I question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, there is no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

I strongly urge you not to increase the Regional Transportation-Related Targets any further. In fact, I believe that you should look toward relaxing those targets altogether.

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, I understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. I not only question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, but I also know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Governor Schwarzenegger recently signed Senate Bill 375, which sets out the process to determine the actual Regional Transportation-Related GHG Targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board!

As someone who lives in California and is concerned about GHG emissions, I have a vested interest in the success of SB 375 and AB 32. I also have a vested interest in helping the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on new housing will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Comment:

Dear Board Members:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals. I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Respectfully,

Reggie Morgan

Ames Grenz Insurance Services, Inc.

Subject: VOTE NO on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, I understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. I not only question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, but I also know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Governor Schwarzenegger recently signed Senate Bill 375, which sets out the process to determine the actual Regional Transportation-Related GHG Targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board!

As someone who lives in California and is concerned about GHG emissions, I have a vested interest in the success of SB 375 and AB 32. I also have a vested interest in helping the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on new housing will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

VOTE NO ON AB32!

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals. I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Governor Schwarzenegger recently signed Senate Bill 375, which sets out the process to determine the actual Regional Transportation-Related GHG Targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board!

As someone who lives in California and is concerned about GHG emissions, I have a vested interest in the success of SB 375 and AB 32. I also have a vested interest in helping the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on new housing will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Subject: "VOTE NO on new emission burdens for housing"

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, I understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. I not only question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, but I also know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Governor Schwarzenegger recently signed Senate Bill 375, which sets out the process to determine the actual Regional Transportation-Related GHG Targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board!

Subject: AB 32 Scoping Plan to Reduce Greenhouse Gas Emissions

Comment:

As someone living with asthma, I urge the CARB Board to adopt a strong global warming scoping plan for California to both slow global warming and achieve immediate reductions in smog and other dangerous air pollutants that cause illness and death. A strong plan will set the standard for national and international action. I also urge the state air board to include a stronger focus on measures to reduce emissions from driving which contribute both the largest percentage of greenhouse gases and dangerous air pollutants in California. Therefore, the plan should include a much more aggressive statewide goal for reducing vehicle trips and measures to promote progressive action by local governments. To reach the state's targets for greenhouse gas reduction targets, the plan should additionally include a strong goal and additional regulatory measures for reducing pollution from industrial sources such as petroleum refineries and cement manufacturing facilities. It is also critical that any measures taken to reduce greenhouse gases contain do not increase hot spots of pollution in communities already impacted by multiple sources of pollution.

Subject: VOTE NO on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Subject: Please vote NO on higher emission targets

Comment:

I am concerned about the proposed recommendation to increase the target amount of the AB 32 Scoping Plan to more than 5 million metric tons.

Please do NOT increase the Regional Transportation Targets any further. The burdens will already be tremendous and our economy simply cannot bear the weight of additional requirements.

I have been following the implementation possibilities of Senate Bill 375. It is readily apparent that there is still no clear process and outcome for SB 375. That process needs time and effort to work. Any action by your Board to increase limit numbers will make SB 375 implementation more cumbersome, more uncertain, and ultimately make SB 375 implementation take longer.

Home builders want to see SB 375 and AB 32 work, but we want to do it in a manner that is predictable, and works for our State's economy as well. If you create a moving target, then I'm afraid there will be a backlash against SB 375. You need to keep the AB 32 limits realistic in order to maintain the support of the construction industry throughout California and eventually throughout the United States.

Again, please do not increase the Regional Transportation-Related Greenhouse Gas Targets. Thank you for your consideration.

Subject: Vote No on new emissions burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Subject: VOTE NO on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Subject: VOTE NO on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Comment:

Homebuilders do not make or sell automobiles; therefore homebuilders should not be burdened with GHG bills. These bills should be targeted toward the automobile manufacturers, or a special tax to the purchaser should the automobile NOT meet specific criteria.

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Rob

Subject: Vote No

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Comment:

In this economic climate, we need to be encouraging the construction, building and home building industries by allowing home buyers to be able to purchase and sell homes. While I am an advocate for the clean business practices as well as consumer practices, the jump to levels above 5 MMT would cause unreasonable economic hardship through excessive regulation on homebuilding and community building. There is a housing problem in California with overcrowding. Legislating mandates on homebuilding will decrease construction activity and cause more loss of jobs to an already hard hit construction industry which provides good paying jobs to American and Californian families. Lets be reasonable and realize the effects for driving businesses into severe financial difficulties and driving up home prices and adding to the affordability problem with regulations discussed in the Sacramento.

Thank You

Subject: AB 32 Scoping plan

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, I understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

I strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. There is no credible scientific evidence that would indicate that larger reductions than those already legislated are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board. These bills were supported by the homebuilders association - administratively bypassing them makes a mockery of the legislative process that is necessary for the type of broad based consensus necessary for this legislation to work.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Subject: VOTE NO on new emission burdens for housing

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

Thank you,

Bob

I strongly oppose AB-32 and any increased requirements of green house gases and particulate reduction over 5 million metric tons.

We have thousands of people out of work in many industries and to force further reductions without a cost benefit analysis of jobs is irresponsible.

Walter Heiberg

Subject: Comments on Land Use Sector Target

Comment:

I wish to offer comments on the Land Use Sector Target, and to urge it NOT be increased to a higher level. The Planning and Conservation League suggests the "land use" target should be raised from 5 million metric tons of CO2 equivalent (MMT) to 11-14 MMT. They state "as shown by the analysis of Dr. Reid Ewing and Dr. Arthur C. Nelson, the 5 MMT target is based upon models that are widely acknowledged to underestimate the benefits of dense, mixed-use development, while the higher target is achievable with policies California is already considering".

It is incredibly elitist to suggest no one but the rich in the future need dream of a new home on its own newly platted lot. The rich will always be able to buy enough offset credits to build their mansions in outlying areas on huge estates, but to posit policies that deny everyone else the right to have a home on its own lot in a new suburban area is elitist and racist. I used to work for the Watts Labor Community Action Committee, and its great founder Ted Watkins. He knew as well as anyone that African-American families wanted and needed the reduced stress of lower density neighborhoods than the inner city provided (not HIGHER densities!), and it would racist now to deny that dream to people who have passed their entire lives in poverty just trying to save up enough for their kids to actually live that dream...Does anyone really believe the folks in South Central would prefer a future (mandated for them!) of a stacked flat in a 20 story building near Skid Row over a nice home with its own yard in Corona?

Subject: "VOTE NO on new emission burdens for housing."  
Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

Subject: Vote NO on further increases to Transportation Targets

Comment:

Dear Chairperson Nichols and Members of the Board:

On behalf of Pardee Homes, I am writing to urge the you NOT to increase the Regional Transportation-Related Targets beyond the proposed 5 MMT level in the AB 32 Scoping Plan.

This year the Legislature passed and Governor Schwarzenegger signed Senate Bill 375, which sets out the process to determine the actual Regional Transportation-Related GHG Targets. That process needs to be given deference and allowed to work.

As a builder of master planned communities and a company that has been recognized by the Governor and the US EPA for green building and land development practices, Pardee Homes has a vested interest in the success of SB 375 and AB 32. We also have a vested interest in helping the state and the home building sector out of its current and profound economic malaise. Imposing out-of-proportion burdens on new housing will neither help our struggling economy nor realistically achieve our AB 32 goals.

We strongly urge you not to increase the Regional Transportation-Related Targets beyond the current proposal of 5 MMT.

Thank you for your consideration of our position.

Subject: Proposed A.B. 32 Scoping Plan – Greenhouse Gas Emissions Reduction Target for Regional Transportation  
Comment:

Ladies and Gentlemen:

Concerning the pending Scoping Plan for A.B. 32, I write to express concern about the proposed recommendation to target a reduction of 5 million metric tons annually of greenhouse gases from regional transportation and land use. Specifically, I understand that the Board and its staff are being asked by some to increase the recommended target for reductions from regional transportation even higher still, above the 5 million metric tons.

I strongly urge the Board not to increase the reduction target for regional transportation any further. First, we are unaware of any evidence that would indicate that even larger reductions are reasonably achievable and would not cause harsh dislocations and extreme economic hardship. Moreover, local governments, county transportation commissions and transportation planning agencies, and countless stakeholders are already faced with implementing the recently-enacted Senate Bill 375, which sets forth a difficult process to spur changes to transportation and land use planning in order to achieve A.B. 32 compliance. Bigger reduction targets for regional transportation in a scoping plan – above the 5 million metric tons annually last proposed – would lead to economic ruin for many sub-regions if they were to be translated, in any way, into S.B. 375 regional reductions.

Accordingly, I respectfully urge the Board not to increase any more the recommended, targeted reduction of greenhouse gases from regional transportation.

Sincerely,

Lucy Kajrys-Dietz

Subject: VOTE NO on new emission burdens for housing.

Comment:

I am writing to express strong concern about the proposed recommendation within the AB 32 Scoping plan to target a reduction of 5 million metric tons (MMT) annually of greenhouse gases from Regional Transportation-Related Targets. Specifically, we understand that the Board is being asked by some to increase that target to something higher, potentially significantly higher, than 5 million metric tons.

We strongly urge the Board NOT to increase the Regional Transportation-Related Targets any further. While we question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, we know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

The recently-enacted Senate Bill 375 sets out the process to determine the actual regional transportation-related GHG targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board.

Homebuilders have a vested interest in the success of SB 375 and AB 32. Homebuilders also have a vested interest in assisting the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on California's homebuilders and consumers will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.

I not only question whether sufficient scientific information exists to support quantifying greenhouse gas (GHG) reductions from passenger vehicles at the proposed 5 MMT level, but I also know of no credible scientific evidence that would indicate that larger reductions are reasonably achievable or sustainable without causing dislocations and extreme economic hardships.

Governor Schwarzenegger recently signed Senate Bill 375, which sets out the process to determine the actual Regional Transportation-Related GHG Targets. That process needs to be given deference and allowed to work. It should not be preempted at this early stage by unilateral action by the Board!

As someone who lives in California and is concerned about GHG emissions, I have a vested interest in the success of SB 375 and AB 32. I also have a vested interest in helping the state out of its current and profound economic malaise. Imposing out-of-proportion burdens on new housing will neither help our struggling economy nor realistically achieve our AB 32 goals.

I strongly urge you not to increase the Regional Transportation-Related Targets any further.
