Email Address: dsilverla@me.com

Affiliation: Endangered Habitats League

Subject: Climate Adaption and Resiliency

Comment:

Under Climate Adaption and Resiliency, the Wildlife Conservation Board is assigned a Climate Adaptation and Conservation Easements program. However, funds expended by the Wildlife Conservation Board for this purpose need to have eligibility beyond purchase of easements per se. Specifically, it is essential that funds are able to be expended for fee title acquisition. Landowners in Southern California are generally uninterested in selling easements (and the cost of an easement would be roughly equivalent to the fee title value). A sole focus on easements will deprive large portions of the state of the ability to participate in this program.

Subject: 3- Year Investment Plan Comments

Comment:

While we are grateful for the opportunity these projects create, there is widening GAP in the ability of small rural communities to avail themselves to both the Affordable Housing and Sustainable Communities as well as the Transformative Climate Communities programs. This is largely because those programs have very large match requirements that is not feasible for small disadvantaged rural communities. We would respectfully request the development of smaller grant programs that focus on strategies for rural DACs to implement these valuable programs on a smaller scale. Small DACs are subject to multiple socioeconomic and environmental challenges and cannot compete with larger communities when the match is set so high yet we are typically burdened by the heaviest of Ozone/PM pollution, contaminated water, pesticides, and oil well contamination. We are the target demographic for these programs, and I sincerely urge you to create off-shoot programs that are feasible for small, rural DACs.

In Gratitude,  
Christine

Subject: Mass timber to support sustainability & affordability goals

Comment:

Attached is a letter from Central City Association's President & CEO, Jessica Lall, requesting that CARB consider funding support for mass timber manufacturing and construction. CCA is an advocacy organization focused on enhancing the vibrancy of Downtown Los Angeles and increasing investment throughout the region, and we believe mass timber can play a meaningful role in improving the state's environmental sustainability and delivering much-needed housing faster and more affordably.

## **Comment 6 for The 3rd Investment Plan identifies priority investments to reduce GHG emissions (3investmentpland2-ws) - 1st Workshop.**

First Name: Matt

Last Name: DiCicco

Email Address: Matt.diCicco@hussmann.com

Affiliation:

Subject: Support for low-GWP incentive program

Comment:

CARB -

Funding the proposed low-GWP incentive program will be critical in establishing a base of reference sites and case studies, which ultimately encourage other grocery retailers to pursue new low-GWP refrigerants. The supermarket industry generally lags in acceptance of new refrigerants for a variety of reasons:

- The availability of service technicians with capabilities to service new system types
- Perceived barriers to available stocked supplies of new refrigerants
- Perceived increased maintenance costs
- Perceived long-term viability of new refrigerants with changing environmental regulations
- Perceived energy cost increases resulting from the use of new refrigerants.

As with many emerging technology trends that benefit climate goals, incentivizing early adopters generates industry buzz and attention that can jump start an industries' adoption of that new technology. As a Certified Energy Manager in retail energy efficiency and supermarket equipment sales I have personally seen these early adopters take advantage of similar programs for LED lighting, rooftop solar, on-site battery storage, electric charging stations, and glass door retrofits for open refrigerated display cases. Over and again I have seen these types of customers implement these changes, internally verify the financial and environmental benefit, and then roll out retrofits and installation programs to all of their facilities.

Conventional high GWP refrigerants may not have the cachet of other highly emitting single source polluters such as cars and trucks or power plants, but they are ubiquitous in our nation and the industry needs attention to begin to enact change. Let California lead the way in promoting this change through a temporary program that uses Cap and Trade funds to provide incentives to large scale low-GWP refrigeration projects.

Best,  
Matt diCicco, C.E.M.

Affiliation: Whole Foods Market

Subject: Support for funding the CARB low GWP refrigerants program

Comment:

Hi Folks,

Supermarkets are facing significant hurdles to the adoption of refrigeration systems that can utilize low GWP gases. These hurdles include low volume related higher upfront costs, low volume related scarcity of technicians, and general lack of knowledge. The potential incentive program being considered by CARB would substantially impact the industry for the good, creating opportunities for retailers to transition their systems to lower GWP gases, at the same time becoming more energy efficient & easier to integrate with clean energy solutions while stimulating economic activity within many communities that desperately need it. Thank you.

Subject: California Cooling Act - low-GWP incentive program

Comment:

Funding is needed for Incentives on low GWP systems to increase the adoption rate of these new technologies. Once the adoption rate increases then costs to implement the technologies will come down and replace the need for incentives.

As a provider of low GWP systems, Evapco has a major manufacturing plant in Madera, CA that would participate in providing these systems and provide jobs and tax revenue to the state.

Last Name: Menzer

Email Address: markmenzer@danfoss.com

Affiliation: Danfoss

Subject: California Low-GWP Incentive Program

Comment:

Danfoss applauds California's leadership to reduce global warming gas emissions by 40% by 2030. The refrigeration industry has technology that will help California meet that goal. However, the technology is still new to many of the users and technicians that will need to be convinced to use this equipment. If California's ambitious goals are to be met, the Low-GWP Incentive Program will need to be generously funded.

We urge you to do so.

Subject: Support of research funding in third investment plan  
Comment:

We write to support continued investment in climate research with proceeds from California's Cap-and-Trade program. As scientists and engineers working in climate and clean energy-related fields, we see daily the important work that is enabled by such investments. We have been drawn to California for PhD research and renewable energy entrepreneurship because of the state's leadership in studying and confronting climate change.

There is continued need to address gaps in research funding, such as for climate adaptation and resiliency. California is not only home to world-leading scientists, but to many groups who will experience a range of consequences of climate change including drought, coastal flooding, and wildfire. We appreciate CCI's statement that "California is committed to supporting research on climate change mitigation, adaptation, and resiliency" as well as the \$32M commitment to climate research conducted by the SGC and CDFA. We write in support of these portions of the CCI Investment Plan and would encourage CARB to consider additional funding allocations to CA-based research opportunities in the future.

On behalf of California ReLeaf, we write to offer our support for the Revised Draft Cap-and-Trade Auction Proceeds Third Investment Plan.

In particular, we applaud CARB for its recommendations to encourage long-term funding for existing programs that are meeting the goals and requirements of state statute created to reduce GHGs and address climate change.

Additionally, we offer sincere thanks to CARB for recognizing the strengths and value of small, community-based grants such as those offered through California ReLeaf. Such recognition is unexpected and greatly appreciated.

Thank you again for your leadership on this important issue.
