Subject: Comments on Cap-and-Trade Auction Proceeds Third Investment Plan

Comment:

Gentlepersons:

Thank you very much for holding the Los Angeles workshop on Sept 5, 2018, which I attended. This will recapitulate my verbal comments.

1) The progress on Natural and Working Lands is much appreciated, and we look forward to carbon sequestration data. In the meantime, far greater investment is both proper and needed for climate adaption for natural lands and for avoided conversion of natural lands (analogous to the SALC program). If large scale habitat reserves and elevational and geographic connectivity are to be achieved, investments in the many hundreds of millions will be required. We urge leadership from CARB and the Resources Agency.

2) While some vegetation treatments are recognized as beneficial for fire safety and ecosystem health in conifer forests, landscape level treatments in scrub communities (chaparral and coastal sage scrub) are neither beneficial nor effective, and indeed may be counterproductive. GHG revenues should not be wasted on such activities by CALFIRE.

Documentation on both items is available upon request.

Thank you for your consideration

Sincerely,
Dan Silver

Subject: Cap & Dividend, not Cap & Spend

Comment:

I encourage the California Air Resources Board (ARB) to return most or all of the auction proceeds to the public following the Cap & Dividend model. The current Cap & Spend approach chooses projects to fund with the proceeds, but will never reach every Californian. California should reconsider its choice of model, and reorient toward Dividends for All. Please see the attached comments.

Sincerely,

Mike Sandler

Subject: Investment Plans Comments

Comment:

Central Sierra Connect Regional Broadband Consortium supports the Comments filed by the California Emerging Technology Fund and urges the California Air Resources Board to optimize Digital Inclusion in funding from the Greenhouse Gas Reduction Fund. Broadband is a green strategy to reduce greenhouse gas emissions and shrink the carbon footprint of major infrastructure systems.

Central Sierra Connect knows first-hand the importance of closing the Digital Divide. We work to get disadvantaged communities connected and low-income households online. Over the course of our work in the Central Sierra region, we see how the lack of broadband availability in this rural area holds residents back from success. They are unable to access educational and economic opportunities other California residents have access to, merely because of where they live. They face dangers due to the lack of access to broadband internet - putting them at greater risk in medical emergencies and disasters with fewer ways of being able to reach help. Thus, we commend and endorse your focus on disadvantaged communities and low-income households.

We also know that collaboration among stakeholders can produce powerful partnerships. We stand ready to assist you in implementing the Third Investment Plan and helping meet the greenhouse gas emission reduction goals for the State of California.

Sincerely,
Patrick Kane
Program Manager

Subject: Digital Inclusion Projects By GGRF

Comment:

These comments are in support of funding greater digital infrastructure and Digital Inclusion by the California Air Resources Board (CARB) in the Draft Third Investment Plan for the Cap-and-Trade Auction Proceeds and Greenhouse Gas Reduction Fund (GGRF).

In 2014 California Broadband Cooperative completed development of the Digital 395 project in the Eastern Sierra region of California.

This broadband network has significantly changed education, healthcare, tourism, and entertainment efficiencies in the region, reduced travel by government entities and the traveling public, and has seen substantial adoption of energy-saving technologies in residential and commercial buildings with (Smart Home technologies), in agriculture and forest management.

As networks are deployed elsewhere to bring the benefits of the digital economy, we continue to witness rapid adoption of highly efficient digital applications in agriculture, manufacturing, transportation, education and healthcare that reduce carbon emissions. The associated efficiencies from broadband have substantial long-term promise to improve factors contributing to pollution and global warming.

Subject: Mendocino County Broadband Alliance Comments, Cap & Trade Auction Proceeds
3rd Invest Plan

Comment:

To whom it may concern, (please forward as appropriate)

Here is another example where a useful addition to these measures would include broadband inclusion. The lack of access to Broadband in my rural Northern California community - and across rural Mendocino County - has severely hampered local economic growth and opportunity.

The Mendocino County Broadband Alliance supports the comments filed by the California Emerging Technology fund and urges the California Air Resources Board to optimize digital inclusion in funding from the greenhouse gas read action fund. Broadband is a green strategy to reduce greenhouse gas omissions and shrink the carbon footprint of major infrastructure systems.

Closing the digital divide is of vital economic impact and importance in our own rural Mendocino County communities. Many county residents including my small town of Albion must still access any sort of internet connection possible (dial-up, satellite, a neighbors benevolence), because broadband is STILL only available in limited corridors of this county.

The Mendocino County Broadband Alliance works to get the disadvantaged communities connected online. We command and endorse your focus on disadvantaged communities and especially low income household needs.

In the wake of recent tragic fires in the region, the need has become more apparent than ever. It is attention to details like this proposed broadband inclusionary statement, in this and future legislation, which will make the difference in our rural economies and opportunities.

Ultimately this type of responsible legislation strengthens California's present and future economic vitality on the global stage. We support meeting the goals of greenhouse emission goals for California.

Sincerely,

Kathy Wylie
Chair
Mendocino County Broadband Alliance

Subject: Healthy Living Soils

Comment:

As a native Californian, I appreciate all that my beloved state is doing to alleviate the climate crisis, and I thank you for your wide-ranging inquiry as you consider options for investing in carbon-reducing strategies and actions. Agriculture is not often looked at in these terms, but organic farming, composting and healthy soils can add significantly to a program's overall carbon reduction goals.

By embracing sustainable farm practices such as planting cover crops, increasing the creation and use of compost and mulch, reducing the use of pesticides and herbicides, farmers can create remarkably effective carbon sinks in their living soils. Besides sequestering carbon dioxide and other greenhouse gasses, healthy soils can also reduce farm run-off and improve air and water quality.

It is important to note also that continuing to engage in existing industrial-style agricultural practices will only hasten global warming. By working with natural systems, we solve the problem from both ends, reducing the emissions traditionally caused by one practice, while increasing sequestration with another.

We hope that you will support the Healthy Soils program as a vital part of your carbon reduction efforts.

Thank you for your time and consideration.

Comment:

September 14, 2018

Re: Support for California Air Resources Board (CARB) on the Draft Third Investment Plan

El Concilio of San Mateo County (ECSMC) supports the Comments filed by the California Emerging Technology Fund and urges the California Air Resources Board to optimize Digital Inclusion in funding from the Greenhouse Gas Reduction Fund. Broadband is a green strategy to reduce greenhouse gas emissions and shrink the carbon footprint of major infrastructure systems.

El Concilio of San Mateo County knows first-hand the importance of closing the Digital Divide. We work to get disadvantaged communities connected and low-income households online. El Concilio of San Mateo County, Inc. (ECSMC) is a 501(c)(3) community based organization committed to increasing education, employment and access to quality of life services for underserved communities of San Mateo County. As part of our services, beginning in 2008 our Wi-Fi 101 program focused on closing the gap in access to technology among low income/underserved residents. Most recently, in January 2018 we advocated and got San Mateo County Board of Supervisors to adopt a resolution to address the digital divide.

Over a 3 year period, this program: 1) registered 4, 375 home for internet service, 2)connected 3,000 home with broadband internet service, and 3) trained 112 individuals to become East Palo Alto Technicians. The program also provided 550 laptops to 6th and 7th grades students. Our long range goal was to create a sustainable social enterprise by training East Palo Alto Techs to refurbish computers and provide technical support to local non-profits on a sliding fee scale.

Thus, we commend and endorse your focus on disadvantaged communities and low-income households.

We also know that collaboration among stakeholders can produce powerful partnerships. We stand ready to assist you in implementing the Third Investment Plan and helping meet the greenhouse gas emission reduction goals for the State of California.

Sincerely,

Ortensia Lopez
Executive Director

Comment:

The California State Coastal Conservancy appreciates the opportunity to comment on the Draft Third Investment Plan for California Climate Investments. Our Climate Ready program supports multi-benefit projects that use natural systems to assist communities in adapting to the impacts of climate change. We suggest adding icons on page 30 to reflect this. Specifically, Climate Ready California Climate Investments will provide Additional Benefits in the "Natural Resources" and "Agriculture" funding priorities.

Thank you for your ongoing efforts to meet our climate goals. We look forward to continuing to work with the Air Resources Board to support projects that reduce greenhouse gas emissions and protect communities throughout our coast.

Thank you,
Carrie Boyle
California State Sea Grant Fellow
State Coastal Conservancy, Climate Ready Program
