Subject: The Hoax Lives On in California

Comment:

As we have all learned recently, due to "Climategate", 'global warming' is a manipulated concept driven by those who are determined to enrich themselves by it. And it is in complete control in good, old California - here, we have a radical left-wing legislature, and Governor who has chosen to drink the Kool-Aid and far too many state bureaucrats who couldn't care less if the state goes bankrupt as long as they have their way. And here we are with Cap & TAX. The stupidity of this nonsense knows no bounds, and you at the ARB will have to answer to the people for forcing this horrible, useless overreach by the government down our throats.

The ARB should be ashamed but I'm sure you are not. While the rest of the civilized world has seen through the 'global warming' idiocy, California leaders are acting like robotic lemmings who refuse to see the truth.

Subject: I can not afford cap-and-trade regulation

Comment:

I do not support eco-policies (cap-and-trade regulation). They lead to oppressive regulation, higher taxes and higher utility bills. The tide is turning against Global Warming theory. The sceptical view is now the majority view.

Comment:

In light of the fraudulent data the University of East Anglia's Climate Research Unit has provided as evidence of a global climate change, I would think it is obvious that all of your regulations are based on lies, deceit, and manipulation. We should all feel outraged and embarrassed for being taken for such fools. You should cease and desist all talk of Cap and Trade as the entire premise has been shown to be the greatest scandal in modern science.

Comment:

I would like to see the bill include a provision for emitters to offset pollution created by travel ground and air by using video conferencing. In other words, include a provision that buying video conferencing systems or services, would be the same as buying credits under the program.

Comment:

I don't like the idea of Cap and Trade. It is silly and backward to let big polluters buy the ability to pollute more from others who don't pollute so much. It also allows for shenanigans.

Comment:

California can't afford cap and trade. We are taxed to death as it is, and yes it is another tax. The middle class will be the ones to lose as usually. The poor don't have to pay their ways and the rich can afford to pay to go over the cap.

Subject: The only future for AB32: simplicity, transparency, equity

Comment:

Dear ARB,

Thank you for your hard work in implementing AB32. A carbon price has the potential to transform California's economy and help stop global warming. However, if done incorrectly, cap and trade could increase inequities, give windfall profits to corporate polluters, and delay meaningful GHG reductions.

I have attached a set of fliers regarding Carbon Share, which is a framework for equitably reducing emissions by providing every Californian income from the sale of emission rights under a cap. Such a Cap and Share system is democratic: One person - One Share, and is similar to a Cap & Dividend program, such as the CLEAR Act, proposed by U.S. Senators Maria Cantwell and Collins and currently being considered by the U.S. Senate. Providing rebates or shares back to households is not just a nice idea, or helpful in reducing the regressivity of price increases on low-income households. It is a political necessity. Otherwise, AB32 as a whole will face a political backlash. If you read the news, you know that it is already facing that, and it is at your peril to ignore it.

Simplicity, transparency, and equity provide the only future for AB32 implementation.

Specific recommendations: 1. Include transportation at the outset in 2012, 2. Auction 100%, 3. Return a majority of revenues back to households (According to the EAAC Report, 60% dividends would provide a net benefit to 54% of households, enough to ensure continued political support for AB32) (dividends are preferable to rebates on energy bills which are less transparent and provide not price signal), 4. Include an escalating price floor, 5. Limit offsets (rather than base your program on offsets or "credits," focus on mandatory permits), 6. Incorporate per capita design elements such as dividends when considering linkages to other ETS systems (this will allow states to build a common-based framework towards international Contraction & Convergence).

Sincerely,

Mike Sandler

Subject: Cap and Trade

Comment:

I prefer a "command & control" approach to regulation and I am skeptical that "cap & trade" will work. Two suggestions to improve the "cap and trade" proposal:

1. Instead of starting the proposed program at 100% of GHG emissions, phase the program in at 5% increments each year. In this way, some facilities could simply reduce production/usage by 5% and have time to evaluate future options.
2. Be consistent. If reducing GHG emissions is important enough to disrupt the economy, then every penny of revenue should be spent on reducing GHG. If the State simply flows the "auction money" into the State's general fund, then the whole process will be perceived as just a "back-door" tax to balance the State budget.

Subject: Funding from Carbon Markets for Land Use/Transportation

Comment:

Dear ARB Staff and Interested Stakeholders:

ARB recently issued cap-and-trade draft regulations that could potentially offer a funding source for land use/transportation through two different mechanisms, as follows:

1) Auctioning carbon permits. If ARB auctions carbon permits to regulated emitters, the revenues from the auction will be available for climate-related programs. Since transportation-related emissions constitute nearly 40% of California's emissions, why not request that 40% of the auction funds be allocated toward land use and transportation?

2) Carbon offsets. ARB will allow regulated emitters to meet a portion of their regulatory requirements through investment into carbon offsets. Why not allow a land use/transportation fund to qualify as a carbon offset investment? By the time ARB puts cap-and-trade into effect in 2012, California will have a regulatory scheme/protocol under SB375 to sufficiently prioritize land use/transportation projects based on their climate change benefits.

Please consider these ideas for incorporation into ARB's final regulations.

Thanks, Joanna Malaczynski

Subject: No on Cap and Trade Program

Comment:

I sat in on a workshop on 1/6/10. The people who have been drafting the cap and trade rule have no clue on how businesses are run in this state. I listened to CARB members present a program concept which they didn't even understand.

I have been able to deduce that any business in Calif. that emits more than 25,000 MT of CO2 must apply for cap and trade. The company must pay an undetermined amount for CO2 emissions annually. This could be anywhere from \$20/MT/yr to \$200/MT/yr. This fee must be paid annually. This is an annual cost of \$500,000 to \$5 million. In these hard economic times no company can have their overhead costs increased by this amount. Most companies operate on very thin profit margins. This is a hardship that immediately makes businesses leave California or consider bankruptcy.

The Cap and Trade Program defeats the purpose of AB32. AB32 proposes to reduce greenhouse gas emissions. If you take away funds from businesses with Cap and Trade, there is much less funding for improvements that can be implemented by businesses to reduce greenhouse gases. Business knows better how to make our respective operations more efficient and non polluting than the CARB.

Businesses of California are the backbone to the economy of this state if you continue to make the economic climate unhealthy for business you will have no economy.

As a business man operating in this state. I can tell you that our company charter states that we will do business in a way that will protect the environment and conserve our natural resources.

I ask you to not adopt this Cap and Trade program. It will will severely damage our state and economy and not reduce greenhouse gas emissions.

Thank you for you time. I would like to discuss this issue further with you before you make a decision.

Comment:

Efforts and technologies for a more Greener tomorrow are worthy goal. However, There MUST be a more gradual time period for the implementation of these technologies. The A.R.B. and the U.S. Government CANNOT and SHOULD NOT implement policies that put Business, People and Whole communities on a path of economic and eventually social ruin to obtain these goals. You people are so far removed from the real world you may as well be on another planet!! Do you not realize that without people working there is no taxes? No industry and and no sustainable way of life, and that you MORONS will be out of a job!! If you had any honor or decency at all you would step down from your positions or stand up to save tha AMERICAN right for business and to raising a family! A cleaner tomorrow can be acheved but it takes time to do it in a sensible, reasonable fashon. Not by cramming it down the publics throats.PLEASE HELP KEEP WORKING FAMILIES WORKING! the policies you make effect the entire nation!

Subject: Comments: Do Not Include HFCs in Cap-and-Trade Program

Comment:

Comments by The Alliance for Responsible Atmospheric Policy  
on California Air Resources Board's  
Preliminary Draft Regulation for a Cap-and-Trade Program

January 11, 2010

On behalf of the Alliance for Responsible Atmospheric Policy (Alliance), an industry coalition representing producers and users of HFC compounds, we submit the following comments on the Preliminary Draft Regulation for a California Cap-and-Trade Program in accordance with the California Global Warming Solutions Act of 2006 (AB 32).

The Alliance was organized in 1980 and has been the leading industry organization on the Montreal Protocol. In addition to addressing effective international and domestic policies for fluorocarbons and for protection of the earth's ozone layer, the Alliance is also working to assess the appropriate manner to address HFCs and their impact on global climate change. A membership list follows at the end of the comments.

The Preliminary Draft Regulation appears to include HFCs in the basket of gases included in the cap-and-trade program. It is noted on page 108 that producers, importers, and exporters of fluorinated greenhouse gases could be covered. The definitions appear to include only HFCs as such a gas. The Alliance points out that none of the cap-and-trade programs that have been established so far, including those in Europe or the US Northeast Regional Greenhouse Gas Initiative (RGGI), include HFCs in their trading scheme.

Unlike most other greenhouse gases, HFCs are not waste gases that are routinely emitted to the atmosphere. HFCs are intentionally produced compounds that serve specific consumer and societal needs in a variety of applications, such as consumer appliances, air conditioning systems, supermarket refrigeration, foam insulation, fire suppression, and medical metered dose inhalers. HFCs are replacements to ozone-depleting CFCs and HCFCs that are being phased out under the Montreal Protocol, and have already reduced the impact on global warming compared to CFCs. Because HFCs have no ozone depletion potential, they are becoming increasingly important as the phaseout of CFCs and HCFCs progresses, and as market growth occurs, particularly in refrigeration and air-conditioning applications.

The US House of Representatives passed H.R. 2454 on June 25, 2009. The bill -provided a separate cap-and-trade reduction

schedule for HFCs. HFCs were not included in the basket of other greenhouses that were subject to a wider and broad cap-and-trade program. The House appeared to recognize that including HFCs in the broad cap-and-trade basket of gases would result in consumption reductions that are unachievable and unaffordable. Nevertheless, the HFC provisions are significant because they achieve greenhouse gas reductions with a market-based approach while minimizing market disruption.

Theoretically, HFC producers/importers could purchase allowances to meet demand for HFCs in excess of the cap; however, the higher cost of these allowances could make HFCs unaffordable for downstream HFC users (e.g., HFC product/equipment manufacturers, distributors, contractors, consumers). As a result, HFC-containing product/equipment manufacturers and importers might need to scale back, which could result in a shortfall of HFC-containing products/equipment for consumer needs.

The Alliance supported H.R. 2454, which included separate treatment of HFCs, including a substantial phasedown. The Alliance noted that the bill provided challenging framework for achieving a significant reduction of HFC greenhouse gas contributions, while recognizing the important societal role these compounds play by contributing to our health and well being. The bill reduces HFC emission contributions 85% below the 2005 base period by 2033, thereby eliminating between 16 and 25 billion carbon tons of carbon dioxide equivalent emissions between 2012 and 2050, depending on business as usual projections and the progress of substitute technology development. This is a much more accelerated pace of reduction compared with the reduction for the non-HFC greenhouse gases.

S.B. 1533, currently under consideration by the U.S. Senate, contains HFC provisions that are nearly identical to H.R. 2454. In addition, there is a movement underway, supported by the US, Canada, Mexico, and nearly 40 other countries to treat HFCs separately in the international climate treaty process by moving them from the climate treaties to the Montreal Protocol where their production and consumption would be addressed. The climate treaties would continue to address emissions. Many, including the US, believe that the Montreal Protocol is better able to address HFCs since the treaty has the expertise as well as the infrastructure in place to better implement environmental protection through its provisions.

Since 2006, the Alliance has also worked collaboratively with CARB in the implementation of AB 32 relating to HFCs. We note that CARB has developed a comprehensive plan for achieving HFC emissions reductions.

As a result of the work already done by CARB and the precedents for regional, federal and international separation of HFCs, the Alliance believes that HFCs should not be covered by the California Cap-and-Trade Program.

Regards,

Dave Stirpe  
Executive Director

Subject: National Wildlife Federation Comments on Cap & Trade Preliminary Draft Reg  
Comment:

January 11th, 2010

Mary Nichols  
Chairman  
California Air Resources Board  
1001 "I" Street  
P.O. Box 2815  
Sacramento, CA 95812

Dear Ms. Nichols,

The National Wildlife Federation appreciates the opportunity to comment on the Preliminary Draft Regulation for a California Cap-and-Trade Program published on November 24th, 2009. National Wildlife Federation has over 4 million members, partners and supporters nation-wide, and is among the primary environmental organizations in the United States addressing the critical need for instituting domestic and international forest protection policies for an effective climate change solution. The loss of our planet's tropical forests contributes approximately 15 percent of annual global greenhouse gas emissions. As an organization with 111,918 active members and supporters in California, we recognize that we cannot win the fight against climate change without addressing emissions from global deforestation.

National Wildlife Federation commends the California Air Resources Board (ARB) for its continued leadership in advancing California's landmark climate legislation. Our organization applauds California's exceptional efforts to create the Governors' Climate and Forests Task Force and work with other states in the U.S., Brazil and Indonesia to tackle greenhouse gas emissions from tropical forest loss. Our organization supports California's efforts to include international forestry efforts, including Reducing Emissions from Deforestation and Degradation in Developing Countries (REDD), into the overall framework of the proposed Cap-and-Trade Program.

National Wildlife Federation urges the ARB to ensure that effective environmental and social safeguards are included in the REDD language of the California Cap-and-Trade Program, along the lines of the provisions included in the U.S. House of Representatives H.R. 2454 American Clean Energy and Security Act, and the Senate Clean Energy Jobs and American Power Act S. 1733. Our organization recommends consideration of the Climate, Community & Biodiversity Standards (CCBS) to validate and verify the social

and environmental benefits of forest carbon projects, and to guarantee that responsible safeguards are included in California's planning of carbon credits generated by REDD programs abroad.

Our organization would like to simultaneously urge the ARB to ensure that the quantity of offset allowances potentially included in the California Cap-and-Trade Program does not significantly reduce incentives for large-scale emissions reductions from regulated sectors in California. The international offset provisions in the preliminary Draft Regulation for a Cap-and-Trade Program could achieve dramatic gains in the reduction of global warming pollution, however this must be appropriately balanced to maintain a reasonable price for carbon that will ensure a transition to low-carbon energy development in future market incentives for California. Our organization also encourages the ARB, as it structures the proposed climate Program, to ensure that any provisions for offsets specifically include measures to benefit air quality in communities suffering from disproportionate levels of pollution within California.

National Wildlife Federation commends California for its pioneering efforts to initiate state action to stop global deforestation and address climate change by including tropical forests under the international offset provisions of its Cap-and-Trade Program. Such a program could help protect California jobs by reducing illegal logging and other forms of forest conversion overseas that result in producing goods that compete in the global market with Californian foresters, farmers, and ranchers. At the same time, it could set an essential example for the rest of the country in pursuing equitable and effective solutions to global climate change.

Respectfully,

Barbara Bramble  
Senior Advisor for International Affairs  
National Wildlife Federation

Subject: Cap and Dividend  
Comment:

Dear ARB,

Please see the attached comments, which recommend:

- 1) An upstream system
- 2) 100% auction of permits
- 3) Compensating consumers on a per capita basis - "Cap and Dividend"
- 4) A price floor on allowances (possibly accomplished through a carbon fee)
- 5) Include transportation fuels from the start of the program in 2012, and
- 6) Limit offsets

Thank you for your consideration.  
Sincerely,

Mike Sandler  
Climate Protection Campaign

Subject: Comments on PRD, offsets methodologies

Comment:

This comment letter focuses on our concerns related to integrating into the compliance system the quantification methodologies that were previously adopted exclusively for use in voluntary actions.

Subject: Regulation that Avoids Shutdowns or Reduced Output for GHG Reductions

Comment:

As the policy for the California Cap and Trade Program takes shape, we urge ARB to develop and implement policy that will guide industry to reduce GHG emissions through energy efficiency or replacement with renewable fuels. We are very concerned that the policies under consideration may instead lead to higher costs for businesses to a point where reductions are achieved through reduced output of plant shutdowns, which leads to higher unemployment and scarcity with higher costs for products targeted under the AB32 program (e.g. electricity). We urge ARB to develop and review key choices, such as free allocation or auction, in light of impacts of industry during these recessionary times.

Subject: Recommendation for Free Allocation of Allowances

Comment:

We ask the ARB strongly consider the allocation program that was set up for the US sulfur dioxide emission trading program, which employed free allocation with a modest level of auctions to address expansions and contractions normal in industry. If free allocation is not employed, California is in-effect taxing industry for the privilege to emit GHG, which today carries no cost burden. To do this immediately beginning 2012 provides industry no recourse other than to shutdown or reduce output to avoid unbudgeted tax burdens.

This type of tax burden may be borne by cash-rich firms, but would punish cash-poor firms; hence GHG reductions will come as a result of availability of cash as opposed to incentivizing industry to strive for GHG reductions through greater efficiency. Free allocation will also reduce the level of auction activity, which will then require less management effort from ARB, reducing costs.

While individual auctioned allowances for CO2 may rise some, the overall costs to industry are reduced through free allocation of allowances, regardless of whether distribution is done by output-based, fixed allocation, or benchmarking.

Subject: Auction Revenues to GHG R&D

Comment:

It is not clear that technology yet can provide inexpensive, off-the-shelf solutions for industry to implement in the reduction of GHG emissions needed to reach the AB32 goals. As such, industries such as the electric generation industry may be faced with making large capital investments or shutting down. In order to avoid GHG reductions through reduced output or plant shutdowns, we recommend that auction revenues be put toward research and development of technologies that industries impacted under AB32 can utilize to achieve the program goals. While funneling the monies toward reduction of taxes statewide is nice, it does little for reducing the cost of AB32 to industry or reducing the risk of causing higher unemployment from shutdowns or reduced output.

Subject: Increase Offset Limit

Comment:

The 4% limit of offsets on emissions is too low. After reviewing ARB's algorithm for coming up with the 4% limit, it is clear that calculation is dependent on the use of offsets, assuming that most if not all facilities will use offsets to the allowable limit. This is most likely not the case, and we encourage ARB to factor in the degree of non-participating facilities in the offset program when setting the offset limit. Otherwise, the offset limit will be overly restrictive as compared to the 49% goal set out in the scoping plan. Recommend increasing this limit to at least 8% of total emissions to account for this and allow for sizeable projects.

Subject: University of California Comments to ARB on Cap and Trade PDR

Comment:

These written comments expand upon the concerns expressed by the University of California (the University) at the CARB public workshop meeting held at Cal EPA Headquarters in Sacramento, December 14, 2009.

In its AB32 Scoping Plan, CARB recognizes the importance of CHP as an emission reduction strategy that will help California achieve the goals codified in AB 32, and calls for the creation of 4,000 MW of additional CHP generation. The University of California (the University) embraces this finding and goal, but is concerned that Cap and Trade may impact CHP operators in ways that create disincentives to retain and develop CHP plants.

The University believes that the simplest and fairest way to incorporate CHP into Cap and Trade would be to create a stand-alone CHP sector that is regulated separately from the conventional, single-output electrical generation sector. The University operates five CHP plants that would be subject to Cap and Trade regulation as currently proposed. These plants are significantly more efficient than conventional separate heat and power generation; for example, UC Irvine's CHP plant emits 22% less greenhouse gas than procured grid power and natural gas-fired boiler operation.\* To account for the efficiencies of CHP compared to separate heat and power generation, the University also urges CARB to allocate allowances to CHP operators based on separate heat and power double benchmarks. These recommendations are consistent with those of the Cogeneration Association of California (CAC) and the California Cogeneration Council (CCC). Additional details on each of these recommendations may be found in the CAC's and CCC's October 2009 written comments to CARB.\*\*

The University has reservations with the CPUC/CEC recommendation to bifurcate CHP's electric and thermal production and regulate the separate outputs in electrical generation and commercial/industrial sectors, respectively.\*\*\* Under the CPUC/CEC recommendation, the University is concerned that the net cost of operating CHP to meet onsite electric and thermal loads will exceed the combined cost of purchasing electricity from the grid and purchasing the natural gas required to operate boilers to meet the thermal needs of a campus. The University's misgivings in this regard are compounded by the lack of clear guidelines from CARB or from the CPUC/CEC on how the thermal output of topping/combined cycle CHP plants will be handled within Cap and Trade.

The University seeks assurance from CARB that Cap and Trade will not disincentivise the continuing operation of CHP plants, the

expansion of existing CHP plants, or the development of new plants. More specifically, the University requests that CARB clarify how the thermal output of topping/combined cycle CHP plants would be treated if the CPUC/CEC Cap and Trade recommendations are adopted. Additionally, if CARB decides to allocate allowances to retail providers to offset rate increases, the University strongly suggests that operators of CHP plants serving onsite electric and thermal loads also receive allowances. Failure to do so will increase the cost of operating a CHP plant, relative to purchasing grid electricity and operating boilers, creating a powerful disincentive to continue operating or expand existing CHP plants or develop new CHP plants.

In addition, the University strongly discourages CARB from allocating allowances to generators based on historical emissions levels. This allocation method effectively rewards inefficient, heavily polluting plants while penalizing emitters that have previously invested in technologies, such as CHP and thermal energy storage, that minimize pollution and maximize plant efficiency.

Were allowances to be allocated based on historical emissions levels, the University is also concerned that it will be penalized for being an aggressive early actor on energy efficiency. Under Cap and Trade, one of the primary emission abatement strategies for operators of onsite CHP plants would be to implement demand-side energy efficiency measures. Between 2009 and 2012, the University will invest approximately \$250M in energy efficiency projects, substantially reducing its emissions before the onset of Cap and Trade. If CARB elects to allocate allowances based on historical emission levels, the University seeks clarification on how CARB will account for voluntary early actions that reduce emissions.

The University also seeks clarification on how CARB plans to accommodate new CHP plants within Cap and Trade. Absent other subsidies or incentives, any new plants, including CHP, would be at an obvious disadvantage if allowances were allocated to generators based on historical emissions levels. Consistent with the goals of the AB 32 Scoping Plan, the University urges the adoption of final regulations that encourage development of new CHP.

The University strongly favors a three-year compliance period to reduce costs and further recommends that CARB streamline its proposed procedures for allowance surrender. In its draft Cap and Trade guidelines, CARB proposed a multi-step allowance surrender process consisting of an initial allowance surrender, data review, reconciliation, and final surrender. Under this proposed system, by December 31 of the third compliance year, a covered entity would be required to make an initial allowance surrender based on:

- 1) That entity's verified emissions for the first two years of the compliance period, and
- 2) A percentage of the entity's annual average emissions calculated over the first two years of the compliance period.

Once the entity receives a positive verification for its third compliance year, its initial allowance surrender would be compared to its actual surrender obligation. If this comparison determines that an entity has failed to surrender a sufficient number of valid compliance instruments, then the entity must surrender the outstanding balance within 30 days or face a penalty.

The University believes that this system is unnecessarily

cumbersome and that CARB would greatly reduce compliance difficulty and costs if it simply required a covered entity to surrender allowances after receiving positive verification for its third year of emissions data.

As a CHP plant operator and a large onsite emitter, the University anticipates that it will face significant compliance costs under the narrow scope of Cap and Trade. While it applauds the goals of AB 32, the University depends on the State of California for its operating budget and is concerned that without increased funding from the state, there is a strong potential that the University's only recourse will be to pass along the costs AB 32 compliance to its students. The University urges CARB to consider the impact of AB 32 compliance on state agencies, particularly institutions of higher education, when determining how allowances and revenue from allowance auctions are allocated.

RE: Comments Regarding the Preliminary Draft Regulation for a  
California Greenhouse Gas Emissions Cap-and-Trade Program

The California Farm Bureau Federation (CFBF) and the California Cattlemen's Association (CCA) appreciate the opportunity to submit the following comments regarding the Preliminary Draft Regulation (PDR) for a California Cap-and Trade Program.

CFBF is a non-governmental, non-profit, voluntary association that represents agricultural interests throughout the state of California and works to find solutions to the challenges faced on farms and in the rural community. Farm Bureau is California's largest farm organization, comprised of 53 county Farm Bureaus currently representing approximately 85,000 members in 56 counties. We strive to protect and improve the ability of farmers and ranchers engaged in production agriculture to provide a reliable supply of food and fiber through responsible stewardship of California's resources.

CCA is a statewide trade organization representing California's \$1.85 billion beef industry and all industry sectors from pasture to harvest. Ranchers and beef producers are stewards of our nation's natural resources and own and manage nearly 32 million acres of California range and forestland providing numerous environmental benefits to include carbon sequestration.

The structure of the cap-and-trade program will have significant impact on the future of California's family farms and ranches because they utilize the products and services of many of the entities subject to the mandatory greenhouse gas emission reductions. The fuel and electricity providers that provide our energy inputs and the food processors that add value to the numerous agricultural commodities grown in California will have to pass along even more exorbitant price increases than previously anticipated unless there a number of significant changes in the PDR as noted below:

Offsets:

We believe that the most cost-effective approach to achieving the emission reduction goal of AB 32 is via a well designed market program that includes a robust offsets program, one with no geographic or quantitative limits. We are very disappointed that the PDR proposes very limited use of offsets and counter to the adopted Scoping Plan is even contemplating limiting those offsets geographically. Such offset restrictions will likely prevent interest and investment in innovative emissions reductions projects in uncapped sectors, which is a significant missed opportunity for climate change mitigation.

This extreme limitation will result in the loss of cost-containment from the use of offsets especially in the early stages of a cap-and-trade program, when new technologies and best practices are still being developed and implemented by capped sectors. The result will be increased costs of the entire cap-and-trade system and a loss of flexibility during the transitional years post-enactment.

Further, the described approach for development and enforcement of offset protocols is so bureaucratically intensive that it is highly likely that very few authorized/approved offsets will be available for the first compliance period 2012 to 2015 and possibly even up to 2020. If the state's cap and trade program is to truly be cost-effective, CARB must find a way to authorize or approve worldwide offsets with minimal bureaucratic hurdles. Real, permanent, quantifiable, verifiable and additional offsets that are recognized by other emissions trading systems (like the EU ETS) should be automatically accepted for use in California.

#### Cost Containment Principles:

We do not agree that the cost containment mechanisms identified in the PDR will be effective. A robust offsets program along with viable linkage to other programs is the best way to achieve the AB 32 emission reduction goals in the most cost-effective manner. While some of the soft collar options propose additional availability and use of offsets beyond the contemplated 4% limit they will not result in cost-containment in a timely manner since the planning, implementation, and execution of most offset projects takes a long time to complete and achieve. The soft collar options would need to be signaled and directed years before the offset credits would be required to realistically ease costs.

#### Linkage:

One way to address the availability of plentiful offsets is via linkage to other programs. Unfortunately, the linkage criteria contemplated in the PDR is so stringent that linkage to other programs (even to the WCI) will be so difficult as to make linkage practically impossible. CARB must streamline the linkage criteria to allow California's program access to credits and offsets in other programs worldwide. One of the goals for AB 32 was as a model for the world - that can only happen if California is able to link with other programs

#### Accelerating Transportation Fuels into Cap and Trade by 2012:

We strongly oppose the acceleration of including fuels - transportation fuels and natural gas - under the Cap and Trade Program from 2015 to 2012. CARB is already imposing the LCFS as an early action on the transport sector which will incur its own significant costs and concerns regarding the potential impact on energy supply. These must first be carefully analyzed before further steps on put on the fuel supply of this state.

Auction - Transitional Issues:

We believe that CARB has limited authority to conduct anything but a minimal auction to cover administrative costs. Further, even if CARB had broader authority to conduct a more significant auction (via legislative authorization), they must transition from a minimal auction to a more significant auction over the life of the program. CARB must fully consider the potential impact on the economy considering that all capped facilities would have to generate \$14 to 30 billion in a 100% auction at a carbon price of \$20 to 40/ton.

Capped Sources:

During the second phase of cap and trade implementation, ARB has proposed to lower the emission threshold to capture additional businesses that emit greenhouse gases through fossil fuel combustion or the use of natural gas. We are concerned that lowering the threshold below 25,000 MT CO<sub>2</sub>e could then require a number of California farms and ranches to be capped sources. Throughout the AB 32 implementation process, ARB has looked to production agriculture to potentially provide offsets for capped sources to achieve the state's greenhouse gas reduction targets. Dramatically lowering the threshold will weaken the ability for production agriculture to provide real and accurate offsets to help capped sources more cost effectively comply with reduction targets. We oppose production agriculture being included as a capped sector in the second compliance period starting 2015.

We will continue to participate in this regulatory process and appreciate your attention to our concerns.

Subject: comments on preliminary draft regulations

Comment:

California has shown impressive leadership in the development of legislation to mitigate climate change and it is good to see the progress that is being made through the development of these Draft Regulations for a California Cap-and-Trade Program.

It is now understood that the forest sector contributes more than 17% of global greenhouse gas emissions and that activities to reduce emissions from deforestation and forest degradation (REDD) and to contribute to conservation, sustainable management of forests and enhancement of carbon stocks (REDD+) are an essential component of effective climate change mitigation. The greatest potential for REDD+ emissions reductions and removals is in tropical regions of the world, mostly in developing countries where these activities also have tremendous potential to generate significant benefits for some of the poorest communities in the world who rely on forests and healthy ecosystems for their livelihoods and also to conserve biodiversity. The Climate, Community & Biodiversity Alliance provides a mechanism through the Climate, Community & Biodiversity (CCB) Standards to identify projects that deliver robust emissions reductions and removals as well as significant community and biodiversity benefits through a set of objective and comprehensive criteria and an independent auditing system. There are now 17 projects that have completed the audit process and over 85 projects that are under development, each of which represents a real multiple-benefit initiative, verified by a third party. Our experience of REDD+ projects in developing countries shows that REDD+ can be, and is being, implemented in a way that respects the rights and interests of vulnerable people such as Indigenous Peoples and the world's poor, enabling their participation as partners rather than targets of the project to conserve and restore forests and enabling them to achieve their own development goals. REDD+ projects are diversifying and improving long-term livelihood security for rural communities for example by increasing agricultural yields, protecting soil and water resources and generating employment and also conserving biodiversity by restoring and protecting natural ecosystems. These positive social and environmental outcomes are a tremendous additional potential benefit from REDD+ that cannot be delivered at the same scale from any other climate change project type.

There is strong support for the inclusion of REDD+ in UNFCCC and US Federal climate change frameworks currently under discussions and, for the reasons outlined above, REDD+ should be included as an approved offset type in the California and Western Climate Initiative cap-and-trade program. It is good to see that international forestry offsets are included in the concept

description for offsets and I look forward to seeing further development of the regulations for this offset type. California is well positioned to lead the way on defining how REDD+ can be integrated into a cap-and-trade program by providing effective and robust offsets, building on California's pioneering work with other states and provinces in the US, Brazil and Indonesia as part of the Governors' Climate and Forests Task Force. While there is an opportunity for leadership, it will also be important to ensure consistency with emerging consensus and the developing architecture for REDD+ at the national (US Federal) and international (UNFCCC) levels.

While REDD+ has potential to deliver robust emission reductions and to deliver significant social and environmental benefits, there are also risks particularly for Indigenous Peoples and other vulnerable groups, so ARB should ensure effective social and environmental standards and safeguards. I note that the PDR mentions (p.63) that ARB would only approve offset quantification methodologies for project types that address any public health, welfare, social, economic and energy effects and urge clearer guidance on this issue with adoption of effective social and environmental standards for REDD+ activities.

Subject: Comments on Cap & Trade Plan

Comment:

Thank you to the State of California and the Air Resources Board for leading the way to reduce greenhouse gas emissions, help stabilize carbon dioxide concentrations in our atmosphere, and, hopefully, avert some of the worst impacts of global warming. I am submitting comments simply as a concerned citizen.

First, the board should research, and the state should consider, "cap and dividend" as an alternative to "cap and trade" market mechanisms to reduce emissions over time. An increasing body of evidence points to this as a better, more fair and stable alternative.

Second, rights to pollute or "allowances" should be auctioned, and not given away for free. No polluter should be grandfathered in. Just because a particular industry or utility has been polluting the atmosphere in the past, they should not be given the right to consider doing so for free. I believe that setting up a blind "all-in" auction is also economically most efficient.

Third, offsets should not be considered as part of the plan. I understand the lure of the idea (why not pay for a re-forestation project in Borneo instead of making actual emissions reductions at power plants in California, especially when they are cheaper?), but offsets will delay the reductions at home (where Californians will enjoy substantial co-benefits such as reduced sulfur dioxide and nitrogen oxide pollution), and delay the technical innovation that California industries and scientists are uniquely capable of creating.

Fourth, the market in emissions allowances should be limited to polluters themselves. We cannot seriously consider allowing big banks and hedge funds to turn carbon into the next toxic asset. I have serious concerns when I read about the amount of lobbying being done by financial institutions. The state must guard against collusion, speculation, and the pursuit of short-term financial gain that will undermine the environmental goals of the program.

Thank you.
