Subject: Point of Regulation question

Comment:

Could you please explain how this discussion is separate from the LCFS? If the fuels are regulated in the LCFS, why are they again being regulated in the larger cap-and-trade program?

Thanks ,
Dan

Subject: re: Linking California's Cap & Trade to other GHG trading Program
Comment:

If the July 27th cap-and-trade public meeting is about "Linking California's Cap-and-Trade Program to Other Greenhouse Gas Trading Programs" I have the following comments:

1. If the Waxman-Markey Bill passes the Senate and is stronger than California's AB32, [i.e. the Waxman-Markey bill that passed the House call for what works out to be a 4% decrease over 1990 levels by 2020 while California's AB 32 calls for meeting 1990 levels by 2020] California will not be able to get approval to operate a more stringent program;
2. If the Waxman-Markey Bill passes the Senate and is NOT stronger than California's AB32, California may get approval to operate a more stringent program;
3. If California links to other Greenhouse Gas Trading programs this could be with RGGI states or provinces or internationally;
4. If with RGGI states or provinces RGGI developed provisions would guide linking;
5. If international links, it would seem there would need to be some "harmonization", i.e. method for determining the specifics of the linkage, what sectors, one-for-one trading of allowances permitted etc.;
6. If the public meeting is about "Linking California's Cap-and-Trade Program to Other Greenhouse Gas Trading Programs" I may have additional comments to submit via email during the meeting.

Subject: Comments on Waxman-Markey and other aspects of Linking to Other GHG Trading Programs

Comment:

The comments supersede the previous comments (which were made prior to viewing the presentation).

1. If the Waxman-Markey Bill passes the Senate and is stronger than California's AB32, California [i.e. the Waxman-Markey Bill that passed the US House of Representatives essentially targets reductions to 4% below 1990 levels by 2020, while AB 32 proposes to meet 1990 levels by 2020] will not be able to get approval to operate a more stringent program;

2. If the Waxman-Markey Bill passes the Senate and is NOT stronger than the California's AB32, California may get approval to operate a more stringent program;

3. If California links to other Greenhouse Gas Trading programs this could be with RGGI states or as part of WCI states and provinces or internationally;

4. If with RGGI states or WCI provinces WCI developed provisions would guide linking;

5. If international links, it would seem there would need to be some "harmonization", i.e. method for determining the specifics of the linkage, what sectors, one-for-one trading of allowances permitted, impacts on prices etc.;

6. If the public meeting is about "Linking California's Cap-and-Trade Program to Other Greenhouse Gas Trading Programs" I may have additional comments to submit via email during the meeting.
