Subject: LCFS comments on non-biofuel

Comment:

Dear Mr. Simeroth and Mr. Courtis,

Attached please find comments submitted by Energy Independence Now on the LCFS. Our comments, in summary, cover the following points:

1. The LCFS appears well designed to incentivize low-level blending of biofuels into conventional fuels, and spurring innovation to source and create lower carbon varieties of these blends. (We offer some thoughts for its fine tuning in that regard).
2. However, although the scope of the LCFS extends beyond biofuels, we are deeply concerned that the LCFS mechanism will not provide a sufficient incentive for the development of these other ultra-low carbon technologies. This could impair our ability to meet long term GHG goals, and effectively leaves all our eggs in one basket - biofuels.
3. We therefore urge ARB to assign dedicated resources and a stakeholder process to address the particular needs of non-biofuel technologies, with special attention to electricity and hydrogen given their low carbon promise. Our letter provides suggestions on some of the key issues to address as part of this.

Thank you for continued work in developing this innovative standard.

Sincerely,

Daniel Emmett

Subject: Sempra Energy comments concerning LCFS concept outline

Comment:

LCFS Team,

Sempra Energy generally supports the comments provided by the California Natural Gas Vehicle Coalition (CNGVC) and the California Electric Transportation Coalition (CalETC) on the Low Carbon Fuel Standard (LCFS) proposed concept outline dated March 2008. In lieu of sending you a separate letter reiterating the points raised by each Coalition, we would simply like to let you know we fully support the comments enumerated by each group. Our position concerning carbon intensity calculation is set forth in my letter to John Courtis dated June 9, 2008.

We look forward to working with each of you on the continued development of this regulation, and if you have any questions, please do not hesitate contacting me or our Manager of Clean Transportation, Bill Zobel at 858-654-8374, or 858-752-1435 (c).

Subject: Policy

Comment:

If oil is responsible for 75% of the market mediated impacts of higher corn prices as Wally Tyner from Purdue suggests, then oil should bear 75% of any indirect land use impacts associated with higher corn prices and ethanol production. So if indirect land use impacts are 40 g/mj then 30g/mj should be allocated to the oil life cycle and 10g/mj should be allocated to the ethanol lifecycle.

Subject: Comments to the Draft Regulation and Supporting Document presented Oct 16 2008

Comment:

Comments are with reference to the Draft Regulation posted here:
http://www.arb.ca.gov/fuels/lcfs/101008lcfsreg_draft.pdf

And to the Supporting Document posted here:

http://www.arb.ca.gov/fuels/lcfs/101608lcfs_supdoc.pdf

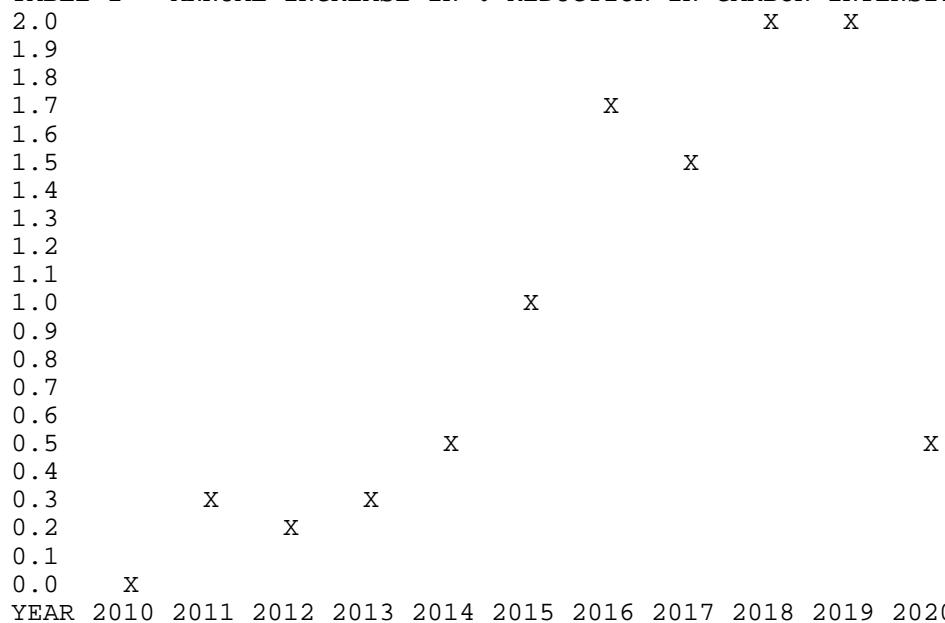

FIRST COMMENT

With reference to Draft Regulation Table 2, page 4

We recommend that Table 2 LCFS Compliance Schedule for Diesel Fuel, (and Table 1 on page 3 for Gasoline Fuel) be modified to require a smooth decrease in fuel Carbon Intensity.

We believe that the ANNUAL INCREASE in the amount of DECREASE in fuel Carbon Intensity on a fleet-wide basis is more likely to be a smooth curve rather than one that first jumps up and then back down three separate times (2011 to 2012, 2016 to 2017, and 2019 to 2020) as does the Compliance Schedule presented in Table 2. This point is especially clear when the proposed amount of ANNUAL INCREASE as shown in the Compliance Schedule is presented in chart form such as the one below.

TABLE 2 - ANNUAL INCREASE IN % REDUCTION IN CARBON INTENSITY

No doubt it is good policy to start with small annual reductions as low carbon fuels are introduced and then increase the size of the annual reductions as low carbon fuels gain wider use. However, unless there is a policy driven reason to require only a tiny annual reduction of 0.5% in the "final year" of 2020, it seems to be a better fit with the natural world to start with small reductions and steadily increase the size of the annual reduction. After all, each annual reduction is a "per cent of the baseline CO2 emission" so there is no "per cent of a per cent" issue here. And, steadily increasing the annual reduction makes sense. As low carbon fuels gain market share you would expect that a 2.0% reduction in 2020 would become as easy to make as a 0.2% reduction in 2011. With growing use of low carbon fuel, it seems unlikely that any later year would have a smaller reduction than an earlier year. It is also unlikely that the reduction curve would reach a "flat top" (see 2018 and 2019 in the chart) in any year prior to the "final year". In fact, given steadily increasing use of low carbon fuels, it seems most likely that the largest annual reduction would occur in the "final year". Especially since 2020 is not really "a final year" at all, just a milestone on the way to 2050.

SECOND COMMENT

With reference to Table 3, page 12 of the Supporting Document:

LINE 3 Average Corn Ethanol CI = 68.2 LUC = 35 Total CI = 103.2

Comment: The only apparent reference for Carbon Intensity of Corn Ethanol on the CARB website is the one released 04/23/08:
http://www.arb.ca.gov/fuels/lcfs/042308lcfs_etooh.pdf.

The bottom line of the table on page 6 of the 04/23/08 document specifies a TWW CI for denatured corn ethanol of 75.6 g/MJ (dry mill) and 89.0 g/MJ (wet mill). A non-weighted average of those two values is 82.3 g/MJ and the Total CI, using 35 g/MJ for LUC, would be 117.3 g/MJ.

What is the source for the new 68.2 g/MJ value for CI? Can you post the supporting calculation?

Thank you for your willingness to extend the deadline. I am formally submitting comments on behalf of all of us at NRDC. We thank you for all your efforts thus far in developing the LCFS and look forward to continuing the dialogue.

I have attached two documents: our comments in response to October's Draft LCFS Regulation and a second document on the lifecycle estimates for different tar sand pathways. We have made available earlier drafts to WSPA, Suncor, as well as other academic researchers in the field. We hope these will be useful to John Courtis and others as they evaluate the non-conventional crude oil pathways.

Attached please find the Renewable Fuels Association's comments in response to the information presented at CARB's workshop on Oct. 16 and the documentation released at the same time.

Additionally, we are requesting an opportunity to provide verbal comments at the Dec. 2 workshop. Tom Darlington, of Air Improvement Resource, would be providing verbal comments on our behalf. Please let us know if Tom can be added to the agenda and if he would be able to use PowerPoint slides.

As always, thank you for the opportunity to provide comment. We appreciate the openness of this process and thank CARB for its careful consideration of stakeholder input.

Subject: Comments for the October LCFS Draft Regulation

Comment:

Attached please find a letter addressed to Chairman Nichols and composed by Environmental Entrepreneurs framing proposals with regard to the LCFS / ILUC.

In summary, E2 believes that CARB can encourage clean energy solutions for the medium- and long-term within a transparent market framework through (i) a comprehensive evaluation system that encourages high-value energy crops and categorically discourages potential negative effects in the production of biofuels, (ii) the separation of the carbon value attributed to various fuels from each fuel's inherent fuel value, and (iii) the requirement that all biomass facilities be certified.

We are requesting clarification as to which portions of our proposals (please see attached letter) are already contained within the LCFS draft and which can be accommodated if not already contained therein.

Subject: LCFS Multimedia Evaluation Functional Equivalent (submitted via internal email)

Comment:

Low Carbon Fuel Standard

CAPCOA supports the goal of the Low Carbon Fuel Standard adopted by ARB to reduce the carbon intensity of transportation fuels. However, to ensure that local and regional air quality impacts are not exacerbated in the process and that energy reduction goals are actually realized, extensive analysis will be required prior to development of the implementing regulation, including the following:

1. Evaluation of the toxic and criteria pollutant impacts of biofuels to ensure that public health is not compromised in implementing this measure.
2. Analysis of the impact of biofuels on broader societal issues and how these might affect implementation effectiveness, such as the potential for the regulation to create "domino" effects on grains and crops that ultimately affect food availability and cost.
3. Development of better tools to assess and audit land use implications of the various strategies, such as potential conversion of pastures, rainforests and other existing carbon sinks to fuel production and how that will affect the global carbon balance.
4. Analysis of the potential to increase light-duty vehicle dieselization if a market-based, averaging mechanism for fuel carbon content is used to provide regulatory flexibility.

Subject: Comments on LCFS as it relates to H2

Comment:

Dear LCFS staff,

Thank you for the opportunity to provide comments regarding the draft LCFS as it relates to hydrogen fuel. Please consider these informal comments - because of the diverse nature of the CaFCP membership, I am unable to gain overall consensus on formal comments. You may also hear from individual members directly.

1. I understand that based on proposed Section 95421(b)(1), providers of hydrogen would be exempt from the LCFS until total aggregate volume of hydrogen sold for transportation in California exceeds 420 million MJ (3.6 million gge) but that hydrogen providers could generate LCFS credits if they choose.
2. Several members agreed that it is appropriate to make the regulated party the owner of the fuel when it is dispensed. I did not receive any negative comments on this point.
3. The lookup table for hydrogen should not default to liquid H2 from natural gas as this cannot be the dominant pathway in California given existing law (SB1505). Instead, use a default pathway that yields SB1505-compliant hydrogen (30% reduction in CO2, 33% renewables etc.) This approach is similar to that used for electricity, for which the look up table value is based on California marginal mix in 2010 (Table 3, page 12 of Supporting Documentation).
4. I understand that providers of hydrogen can justify a lower carbon intensity value than what is included in the lookup table if they can support it for their specific pathway.
5. Using the Honda Clarity's USEPA certified fuel economy data to calculate the FCV EER of 3.0 is appropriate.
6. CARB's LCFS hypothetical compliance scenarios include FCVs ranging from 70,000 to 220,000 vehicles in the total fleet by 2020. These numbers are lower than other scenarios evaluated by the National Research Council[1] and the Oakridge National Laboratory[2]. Although the CaFCP members do not have a consensus recommendation for which numbers to use in a scenario that shows the possibility of ZEVs being more heavily weighted to FCVs, CARB could look to these studies for guidance. Keep in mind these studies clearly state that significant policy and financial incentives would be required to achieve a sustained, high-volume FCV market (also true for other alternative fuels.)

Please let me know if you have further questions or need more input.

Catherine

Subject: LCFS Comment

Comment:

Dear Ms. Singh:

I am an executive of Sirona Fuels, a biodiesel producer in the San Francisco Bay Area. I write today to comment on the draft LCFS regulation as discussed at the January 30, 2009 workshop and to encourage an accelerated timeline for Biodiesel and other diesel alternatives.

I appreciate the change made in the implementation timeline from the December workshop to begin implementation in 2011 but request more be done. According to the California Energy Commission, California is using 43+million gallons of Biodiesel per year. California has nine Biodiesel plants operating, with an estimated total production capacity of 63 million gallons per year; another 4 plants are idle and at least one is under construction. The existing infrastructure is more than capable of meeting the demands of a one percent reduction in carbon intensity beginning January 2010. Furthermore, according to the California Energy Commission, the current AB 118 investment plan will allocate funding towards the development of biodiesel blending and distribution infrastructure. I strongly recommend ARB to revise the implementation timeline for the diesel fuel pool to include more aggressive decreases in carbon beginning in 2010.

Thank you for your consideration of these comments. Should you have any questions or need additional information please call me at 415-244-4046.

Sincerely,

Robert Kirsten

Comment:

Ms. Singh,

Re: Recommend ARB to revise implementation timeline for diesel fuel pool to include more aggressive decreases in carbon beginning in 2010.

I am a former City Councilman as well as former Chairman of the Planning Commission here in Santa Monica California. I created the first Santa Monica Alternative Fuel Policy for our city in 1992.

I currently serve as an Environmental Programs and Policies Director for a company in the Los Angeles area that has a fleet of trucks running on B99.9 Biodiesel legally made from recycled cooking oil. By using a locally secured and manufactured waste product, this company is substantially reducing green house gasses. Further, the company is reducing California's dependency on foreign fossil fuel.

Our company has become a model for other fleets who also want to make a significant reduction in air pollutants while at the same time supporting the California economy. Biodiesel produced in California from various feedstocks is a great opportunity to make a significant ecological contribution while at the same time providing jobs and a much needed stimulation to our California financial situation.

The Biodiesel industry in California is on the rise and capacity to produce the product grows every month. Plants on coming online at a rapid pace and more are planned. But the State needs to move much more aggressive in facilitating this expansion. I strongly recommend ARB to revise the implementation timeline for the diesel fuel pool to include more aggressive decreases in carbon beginning in 2010.

Thank you for your time.

Subject: Comment re: Draft LCFS Regulation

Comment:

Ms. Singh-

Attached please find a comment regarding the draft LCFS regulation. As I state in the letter, we have the capacity to reduce carbon emissions in the diesel fuel pool at a significantly more accelerated rate than the current ARB proposal. Biodiesel producers in California will have no problem producing enough fuel to reduce carbon emissions by one percent in 2010. Accelerating the implementation schedule will lead to more investment in the California biodiesel industry, creation of in-state jobs, tax revenue for the state, and a cleaner environment. I strongly urge the ARB to enact a more aggressive implementation schedule than the current proposal.

Thank you for your time,

Dan Tenenblatt

Subject: Comment regarding the draft LCFS regulation

Comment:

Dear Ms. Singh,

Please consider the attached comment regarding the draft LCFS regulation. As I state in the letter, the existing infrastructure can do even more than just meet the demands of a 1% reduction in carbon intensity beginning January 2010. And if we accelerate the timeline for biodiesel will can encourage one of the greenest industries in California. Thank you for taking the time to consider this important request.

Sincerely,
Trevitt

Vice President

Comment:

Manisha,

Thank you for the opportunity to comment on the recent draft of the California Low Carbon Fuel Standard regulations and the materials provided at the January 30th workshop. Attached are our written comments.

Please contact me if you have any questions regarding the attached document.

Also, at the 1/30 meeting, there was mention of a February workshop regarding CARB's LCFS Economic Analysis. Is there any word on the date, time, location for this meeting?

Regards,

Comment:

Anil and John,

As we have monitored the LCFS work done to date, and as a follow up to the January 29th workshop we are formally submitting a questions for your February 13 comment review deadline. We are producing a fuel which could be sold in to California later this year and we want to understand how we will need to account for selling fuel as part of the LCFS being proposed.

Please find the documents attached for our questions.

If you should have any additional questions, please be in contact with us directly.

Best regards,

Cory Wendt

Comment:

Good morning Chairwoman Nichols-

Hope you are doing well. For your reference, I have attached a letter that we, 110 scientists representing a wide spectrum of biofuel activities worldwide, will submit to Governor Schwarzenegger in the near future that addresses concerns we have around the imminent policy rulings by the ARB on the selective inclusion of indirect land use impacts for biofuels.

Best regards,

Blake
