Subject: Ag Methane

Comment:

On the Non-Energy Emissions slide there are different assumptions on cattle ag methane reductions and the deployment of i) digesters ii) Alt manure management and iii) enteric methane reductions. You also mentioned herd reductions but I don't see that on your slide.

Alt 1 says No Digester capture but Alt 2 3 4 have variously declining uses in digesters, what does No Digester Capture mean in Alt 1,

Also what % of cattle are protected by digesters in each Alt.

Also what cattle herd reductions are assumed?

Subject: ZEV are not Zero Emissions but are plus 62.52 to 90.64

Comment:

ZEVs are not Zero Emissions but have a Carbon Intensity of 62 to 90 (gCO2e/MJ)

ZEVs are not zero greenhouse gas emission vehicles but have a carbon intensity of 62 to 90 (gCO2e/MJ) when combining the energy required to produce electricity to charge the battery and the manufacturing process of the battery. CARB's existing emissions factor, which accounts for the energy required to produce the electricity the charge the battery is 23.39 (gCO2e/MJ). The range of emissions from the battery manufacturing alone, assuming a 100,000-mile lifespan, have a carbon intensity of 38.13 - 66.26 (gCO2e/MJ) depending on the type of ZEV battery.

AB 32 Climate Change Scoping Plan Statutory Requirements is to Minimize Leakage

ZEV batteries that are manufactured out of state are increasing non-Californian emissions in other states and countries in the amount of 38.13 - 66.26 (gCO2e/MJ) depending on the type of ZEV battery. CARB is picking ZEV as the technology winner while leaking emission out of state.

Environmental Justice for All?

CARB Should Not Exacerbate Harm to Disproportionately Impacted Communities

Cobalt is mined by forced child labor in the Democratic Republic of the Congo. Think about the extraordinary volume of water and resources used to mine rare minerals for the car's Battery Electric Vehicle (BEV). Amnesty International has documented serious human rights violations linked to the extraction of the minerals used in lithium-ion batteries. Think about the environmental degradation the BEV car imposes on Mother Earth, outside of California on the people of Africa, China, South America, and first nations people of Canada. The Environmental Justice Advisory Committee should be briefed and provide input on this topic.

Subject: CGNP's Comments - 2022 Scoping Plan Update – Initial Modeling Results Workshop

Comment:

Hello, CARB:

Here are CGNP's comments. The package contains 4 pages with CGNP's comments followed by 30 pages of relevant supporting materials.

CGNP looks forward to having careful CARB consideration of this packet. CGNP is particularly concerned about the unprecedented emissions leakage that would occur if the State of California plan to close Diablo Canyon Power Plant in 2025 occurs. Emission-free Diablo Canyon would be replaced in large part by emission-laden Wyoming coal-fired generation. CGNP was alerted to some elements of the State of California plan when CGNP had a tour at CAISO's headquarters on May 20, 2016, more than a month before the secret plan to close Diablo Canyon was unveiled on June 21, 2016.

Sincerely,

Gene Nelson, Ph.D. CGNP Legal Assistant

Comment:

Thank you for the opportunity to submit comments about the 2022 Scoping Plan Update Initial Modeling Results Workshop. I represent the Mammoth Lakes Trails and Public Access Foundation (MLTPA), a recreation advocacy organization based in the Eastern Sierra.

In CARB's study of the regional social costs of carbon, I would encourage you to look at our region's climate change and vulnerability assessment

(<https://resilientca.org/projects/c1df157c-0117-49b3-8056-296ff7bb786c/>). The report analyzes the relationships among the economics, public health, and natural resources of our 17,148 square mile region.

MLTPA looks forward to commenting on the draft 2022 Scoping Plan later this spring.

Thank you,
Rita Keil

Subject: ELECTRICITY TO MAKE HYDROGEN IS HIDDEN

Comment:

<p class="MsoNormal" style="line-height: normal;">ELECTRICITY TO MAKE HYDROGEN IS HIDDEN</p>

<p class="MsoNormal" style="line-height: normal;">by Phil Birkhahn, Co-Chair Transportation Committee, San Diego 350</p>

<p class="MsoNormal" style="line-height: normal;">E3 Slides 25 and 26</p>

<p class="MsoNormal" style="line-height: normal;">The two slides, E3 25 and 26, hide the massive environmental impact of hydrogen fuel cells. In addition to the fuel cell capacity, renewable electricity capacity of 55 GW is required for other electricity hogging steps before hydrogen is pumped into a fuel cell. It is shown in my edit of your graphic.</p>

<p class="MsoNormal" style="line-height: normal;">Only one-third of the electricity used to make and deliver hydrogen is regenerated by the fuel cells. That low efficiency of just 33% must be carefully considered and all other options exhausted before the desperate move to hydrogen is made.</p>

<p class="MsoNormal" style="line-height: normal;">Just saying the “loads . . . will be provided by off-grid renewables” on E3 Slide 24 is a cop out. Vast amounts of land will be required for the solar panels and maybe some wind turbines.</p>

<p class="MsoNormal" style="line-height: normal;">The huge demand for land for solar farms, is on the same order as the entire generating capacity of California today. Think three times more solar panels in the desert.</p>

<p class="MsoNormal" style="line-height: normal;">Competition for the land will surely drive up the cost of all electricity used in California. </p>

<p class="MsoNormal" style="line-height: normal;">Question: Why do columns for Alternatives in E3 Slides 25 and 26 show no fuel cell capacity. Other slides in the E3 presentation indicate substantial demand and use of hydrogen. Will of that hydrogen be burned?</p>

Comment:

The Center for Biological Diversity appreciates this opportunity to provide input regarding the initial modeling results for the 2022 Scoping Plan Update presented at the March 15 workshop. Here we focus on instances where the modeling assumptions appear to be faulty or unsubstantiated, and we recommend ways to make the modeling analyses as robust, science-based, and transparent as possible.

Subject: CASA Comments on 2022 Scoping Plan Update - March 15th Initial Modeling Results Workshop

Comment:

Hello -
The California Association of Sanitation Agencies (CASA) appreciates the opportunity to provide the attached comments on the Scoping Plan Update's Initial Modeling Results presented during the March 15th Public Workshop. CASA is an association of local agencies performing essential public services - cleaning wastewater to protect public health and the environment while advancing community resilience through the recovery of renewable resources (water, energy, fuel, biosolids, nutrients, etc.). Through these efforts we help create a clean and sustainable environment for Californians. Please contact me with any questions at sdeslauriers@carollo.com or at 925-705-6404. We look forward to collaboratively working with you on this critical effort.
Sincerely,

Sarah A. Deslauriers
CASA Climate Change Program Manager
