

Comment 1 for Transport Refrigeration Unit Regulation Concept (truregulation-ws) - 1st Workshop.

First Name: Steve

Last Name: Ritchie

Email Address: steve.ritchie@irco.com

Affiliation:

Subject: Enforcement

Comment:

What is being done to improve enforcement? Many fleets avoid the increased equipment costs because they don't think they will be caught.

Comment 2 for Transport Refrigeration Unit Regulation Concept (truregulation-ws) - 1st Workshop.

First Name: Michael

Last Name: Cornett

Email Address: mcornett@tcstk.com

Affiliation: Thermo king

Subject: Electric Charge Guidance

Comment:

Is CARB going to limit facilities on what they can charge for TRUs plugged into their facilities. Generally, length of stay of the TRU is up to the facility not the Trucking company.

Comment 3 for Transport Refrigeration Unit Regulation Concept (truregulation-ws) - 1st Workshop.

First Name: Alfonso

Last Name: Arambula

Email Address: alfonso.arambula@arb.ca.gov

Affiliation: CARB Enforcement

Subject: 2478.3 Stationary Operating Time Limit (SOTL)

Comment:

I suggest specifying that a Trailer TRU or TRU Gen Set must change location by 10 feet with respect to the applicable facility geofence for the SOTL to restart at zero.

Not specifying the distance that must be traveled to restart the SOTL to 0 may lead to challenges enforcing SOTL violations. Primarily, SOTL violations may be contested because the rule does not specify a necessary travel distance to restart the clock to zero. A violator may point to the rule as written and state the violation was issued incorrectly because their Trailer TRU changed location with respect to the applicable facility geofence restarting their clock to zero because their Trailer TRU changed location by 8 feet.

Comment 5 for Transport Refrigeration Unit Regulation Concept (truregulation-ws) - 1st Workshop.

First Name: Timothy

Last Name: Anderson

Email Address: tanderson@plmfleet.com

Affiliation: PLM FLEET

Subject: Transport Refrigeration Unit Regulation Concept

Comment:

1- TRU IN-USE ULETRU DEADLINE OF 12/31/2023-

This deadline for ALL in-use TRU's to be ULETRU compliant by 12/31/2023 will force an acceleration of all <25HP TRU's starting with MY2017 thru current production to be filtered well ahead of already planned schedules.

This is not as per the planned 7yr schedule already enacted.

This will put quite a financial and logistical burden on many companies that purchased 7yr compliant units during those Model years. Financially to purchase the filters and then logistically to find service shops with personnel to install within that time frame, meanwhile everyone else is trying to do the same thing.

In my opinion, You should continue the existing schedule to filter after 7 yrs and make it such that all NEW TRU's after 12/31/2021 be ULETRU.

This will bring lower emission units into the state sooner and the companies can keep the current schedules to filter thru 2027 and still meet your 2030 deadline for all units to be compliant with ULETRU.

We already have units on order that have 7yr engines and cannot cancel or change the order at this late date.

2- TRU REGISTRATION-

The proposed TRU registration renewal of 1-2 years is too short. It is my understanding that this new process will require a serial numbered decal to be placed on each asset. This process of a 1 or 2 year renewal plan puts a level of difficulty to locate and install the CARB decal being provided onto the specific vehicle within the time frame required. Only to have to repeat the process again within 12 to 24 months for each and every asset. For small captured fleets this may not be such an issue but larger fleets and leasing companies that do not have daily responsibility to manage asset location, routes or drop yards will find it most difficult to comply and will most likely receive fines more often despite having paid the registration fee.

Suggestion#1- A 1 time registration for life of the asset or up to 7 years. Replacement decal to be installed on TRU within 90 days of registration. Registration Decal to show TRU ARB registration number and date of registration expiration.

Suggestion#2- A 1 time decal with electronic annual renewal that would not require a new decal when renewed. Officer can check registration status electronically from CARB data base using TRU s/n, ARB#, VIN# or TAG#. Companies could then update registration and not have to revisit the asset to replace the decal.

NOTE- if registration decal becomes damaged or missing there must

be an easy to use electronic process to order replacement.

3-TRU OWNER RESPONSIBILITIES for SOTL violations-
For leasing and rental companies that do not provide management of the driver, routes, loads, schedule appointments for pick and deliveries or other daily asset activities. How can the owner be held responsible for the SOTL fines?

4-GPS REQUIREMENTS-
Geo-fencing any facility can easily be accomplished within almost any GPS product on the market today. However not all GPS products can change the ping rate from 15 minutes to 1 minute based on an asset being inside a Geo-fenced area when stationary for more than 15 minutes. I have talked to 2 different GPS companies, neither will honor our current price structure for this level of reporting. Both companies commented that to do this will take considerable programming hours to modify their existing system to be able to perform this level of reporting and this could easily double or triple our monthly fee for data due to the increase in data reporting being required. This will put yet another burden on companies that will just pass the cost on to the consumer.
