Ms. Mary D. Nichols
Chairperson, California Air Resources Board
1001 "I" Street
Sacramento, CA 95814

RE: VW Settlement and Disadvantaged Communities

Dear Ms. Nichols and Board Members:

It is our understanding that the Air Resources Board (CARB) is soon to consider the investment plan of Electrify America to satisfy the consent decree for air quality standards violations related to VW vehicles and that the Zero Net Energy Community project for the City of Carson is a possible target location. As such, we wish to provide our support for both Electrify America to meet its obligations and wish to further support the role of the City of Carson. The tea

First, we note the significance that Electrify America has previously recognized the specific value of an electric vehicle charging infrastructure project in the City of Carson, California in its most recent submission to CARB. Moreover, according to US Census data, Carson is one of the most ethnically diverse cities in the United States (Latino: 37%, Asian: 26%, African American: 24%, White: 24%) with a high percentage of low-income, disadvantaged families. In addition, according to the CalEnviroScreen 3.0, the City has some of the poorest air-quality scores in the State of California (98-100, <https://oehha.ca.gov/calenviroscreen/sb535>) and adjoins refineries, chemical manufacturing facilities, and other major sources of air pollution. Finally, the City of Carson lies in a critical transportation axis where charging options are essential to foster greater adoption of EV such as the I405, I110, I710, and 91 freeways as well as major East-West surface streets.

Of note, the EV charging infrastructure proposal for Electrify America in the Carson community/Charge Bliss project satisfies the following explicit requirements of the consent decree:

1. Create another "Green" City.
2. Provide services to "citizens who live primarily in disadvantaged communities."
3. Foster adoption of zero emission vehicles in a disadvantaged community.
4. Address comprehensive State air quality goals.

Furthermore, we support the overall goals of the Charge Bliss/CEC project to offset all energy usage with co-located renewable generation, mitigate peak load through battery storage, create efficiencies with LED lighting and new mechanical systems, and to actively manage the EV charging infrastructure through cutting-edge control systems designed by the UCLA group. The alliance of the City of Carson, South Bay Cities Council of Governments, Charge Bliss, and many other key stakeholders makes the prospect of overall project success very high. This will be bolstered substantially by Electrify America's prompt commitment to project participation and, specifically, funding of EV infrastructure design, engineering, construction, and operation.

We strongly support CARB in approving the Electrify America plan with specific inclusion of its role in the Carson project. This will bring significant improvement to air quality, health, and welfare of the citizens of this disadvantaged community, increase the adoption of zero emission vehicles, engage students in Science, Technology, Engineering, and Medical (STEM) fields, and significantly improve EV charging infrastructure at key locations including major transportation routes and multi-unit dwellings.

We therefore urge the Air Resources Board to expedite the process for Electrify America to formalize and begin their contribution to this critical project and we further urge the Board to explicitly require Electrify America to specifically participate in the Carson EV charging infrastructure design, engineering, construction, operation, and maintenance. We ask that CARB support and instruct Electrify America to allocate a minimum of \$4.0M for project purposes as soon as possible in the interest of expediting comprehensive designs and engineering to best ensure project success. We believe this demonstration of a Zero Net Energy Community juxtaposed with comprehensive zero emission vehicle infrastructure will both meet the consent decree requirements and lead to recognition of the value of comprehensive "green" energy projects for disadvantaged communities.

Thank you for your time and consideration.

Subject: Carson City: Zero Net Energy

Comment:

Please support and direct VW, through its subsidiary Electrify America, to move forward with the Charge Bliss Zero net Energy Community project for the City of Carson <http://www.energy.ca.gov/contracts/GFO-15-312/> as part of the city's plant to satisfy the Consent Decrees with the California Air Resources Board (CARB). This city is precisely the type of community to which this decree is prioritized with its low air quality and economically disadvantaged.

This project is to include 60 charging devices for multi-unit dwellings, workplace, and destination charging, and up to three locations for multiple DC fast charging devices. Additionally, "Drive and Ride" events will be organized to provide incentives at schools and car hailing services throughout the city to encourage the adoption of electric vehicles.

The project will also incorporate solar systems, energy storage systems (batteries), and load management, all to mitigate any energy demands that the installation of a large, new EV charging system would incur.

This is a critical project for all parties concerned, because the installment of this infrastructure will serve a disadvantaged community, improve EV adoption, incorporate renewable energy and load management, and satisfies the Consent Decree of CARB. Please encourage Electrify America to participate.

Thank you,
Jon Whitworth

Comment:

California and the environment desperately need these charging stations to exist. Please approve the VW settlement as it's been amended and let's begin building the charging infrastructure CA needs. Though you could also add that VW should greatly reduce the cost of their e-golfs as well for low income folks too. And also add some money overall to CA ZEV rebate program.

Sincerely,

Ryan MacPhee

Comment:

To whom it may concern,
The attachment, is a pictorographic representation of the time which remains to have electric transportation and renewable energy in place. The collected data suggests that CO2 emmissions globally are reaching the avoidable limit of 500 ppm of CO2 in the atmosphere faster than was initially expected. In otherwords, it was anticipated that we had until 2050, as of 1.5 years ago. Due to increase in emissions world wide, we shall surpass the limit, 16 years ealier. Even today, the trajectory has likely been altered again, since CO2 is still accumulating in the atmosphere rapidly.

Sincerely,
Alexandra Anderson Beaulieu, BA Biology, Concordia University

Comment:

To Whom It May Concern:

The City of Carson is committed to being a Zero Energy Community and is working with the South Bay Council of Governments and Charge Bliss to implement a demonstration project for disadvantaged communities that would assist our City greatly in reaching this goal and setting an example for other disadvantaged communities that positive environmental changes are possible.

Our City Council recently adopted a resolution supporting the Paris Climate Accord, since we believe local governments need to set an example for our residents and businesses. We have been working with the Council of Governments to implement programs to meet our climate and GHG reduction goals.

As a disadvantaged community in the southwest portion of Los Angeles our residents suffer from some of the greatest health impacts from air pollution in Southern California. The City is one of only two in the state who operate stroke centers for our residents and the residents from surrounding communities who suffer from strokes related to air pollution.

The ZEV investment in the City of Carson would greatly assist the City in reaching our Zero Energy, sustainability and GHG reduction goals, setting a positive regional example that disadvantaged communities can improve the environment. Please don't hesitate to contact us if you have any questions or need additional information as you review our grant.

Thank you for your consideration.

Comment:

Dear CARB Leadership:

The city of Carson is a very diverse city located in Los Angeles County. It is surrounded by the 110 freeway, the 405 freeway, the 91 freeway and the 710 freeway. TESORO oil refinery, Shell oil and Kinder Morgan refinery join these freeways in contributing to the poor air quality experienced by Carson residents on a daily basis. Our city officials and staff are working tirelessly to correct this problem. Our world is moving rapidly towards clean renewable energy. Electric cars is a major element in reaching our goal. Critical to encouraging the purchase of EV's is an infrastructure that supports them. To build such an infrastructure, funds are a must. The Volkswagen settlement is essential to our quest to improve the lives of the residents in Carson. I am asking you to choose Carson as the city to become the recipient of the VW funding. Thank you

Comment:

Dear CARB Leadership:

I am urging you to expedite putting the consent decree with VW into action through its subsidiary Electrify America as soon as possible. This will be critically important to the expansion of electric vehicle charging infrastructure throughout the state. In particular, I am supporting the importance of Electrify America investing in Carson, California.

I purchased my home in Carson in 1972. As an active civic minded individual, I have joined with my neighbors to support other projects that enhance and improve our city and neighborhoods.

As more and more homeowners install solar panels and explore the purchase of energy efficient vehicles, it is ever more important that the infrastructure be in place to encourage expansion of efforts to save our planet and environment for the future. As resources diminish we must conserve where and when we can.

This is a wonderful opportunity for Carson, California and our citizens. We are a progressive city and enjoin you to include us in this endeavor.

Sincerely,
Barbara S. Palmer

Subject: If this "is not a penalty", then what is it?

Comment:

Madame Chair Nichols and Esteemed Committee Members:

"The Cycle 1 CA ZEV Investment Plan lays out a business investment, not a penalty payment plan[.]" (Electrify America, on behalf of Volkswagen, Supplement to the California ZEV Investment Plan / Cycle 1, at 2 (Jun. 29, 2017)).

What is this ZEV Investment Plan if it is not a penalty and where does ARB's authority to enter into it stem from? Is this a mitigation action? Is it a supplemental environmental project? Is this even equitable and fair? I would argue, and I believe the Law Reviews of the World will agree in the near future, that this—in its current form—qualifies as none of the above.

I urge the Board and its Commissioners not to approve this self-dealing, anti-competitive settlement simply. Just because it allegedly resolves and addresses the liability and culpability of the greatest intentional fraud ever carried out on a global scale, does not make it true.

The audacity and brazenness that is evidenced in just the first two paragraphs of this Supplemental Filing is absurd and shows just how little respect Volkswagen has for the rule of law, the spirit of this Consent Decree as approved by the Ninth Circuit, and traditional notions of fair competition, equity, and justice. We should NEVER back down from seeking unfettered justice against those who wilfully harm our environment and intentionally defraud our fellow Californians simply because the violator is a massive corporation from a foreign nation able to hire the largest, most powerful law firms. We have alternative remedies available to us, and we should continue pursuing them until the final Settlement—in its entirety—is fair and equitable to both American citizens and corporations, which this ZEV Investment Plan is anything but. If we permit this ZEV Investment Plan, what is to prevent VW from then going forward and creating subsidiaries to similarly funnel all of the Appendix D funds back to itself?

While portions of the Volkswagen 2.0-Liter Consent Decree, including the vehicle buyback provisions, are clearly permissible mitigation actions, it appears those activities funded under Appendixes C and D to the Consent Decree could—or should—be, for all intents and purposes, Supplemental Environmental Projects (SEP). Yet, Volkswagen's self-dealing via the funneling of all funds through its wholly-owned subsidiary, Electrify America, are in contravention of all available guidance issued by US EPA and

CARB regarding SEPs. (Cal. Air Res. Bd., Final Draft, Supplemental Environmental Projects Policy (Oct. 17, 2016)). No other violator in the State of California has been permitted to benefit from its own SEP since the inception of these programs after the Dynegy (EVgo) Settlement. Additionally, based upon the final civil penalties levied by CARB, the ZEV Investment Plan exceeds the permitted 50% maximum allocation of a civil penalty toward an SEP that California law would otherwise permit after Jan. 1, 2017. Thus, this cannot and does not qualify as an SEP—which is even riskier for California, its environment, citizens, and industry.

If this ZEV Investment cannot qualify as an SEP, then I believe the remaining source of authority for this type of action is a very slippery slope in that it will preclude all of these activities targeted under Appendixes C and D from being used as SEPs in the future by any other violators in the State of California. If Appendixes C and D are to be considered mitigation actions instead of Supplemental Environmental Projects, then the Board risks precluding—rather, it is affirmatively precluding—nearly all sustainable transportation projects from being performed as SEPs in the future. A mitigation action is one “the government believes a court could order as injunctive relief”, whereas an SEP is a voluntary project which otherwise “cannot be secured outside the settlement context.” (U.S. Env’tl. Prot. Agency, Memorandum, Securing Mitigation as Injunctive Relief in Certain Civil Enforcement Settlements (2nd edition) (Nov. 14, 2012). Available at <https://www.epa.gov/sites/production/files/2016-08/documents/2ndeditionsecuringmitigationemo.pdf>). Therefore, any activity authorized under this Consent Decree, which is in and of itself a form of injunctive relief, cannot be used in the future as an SEP because it has now been proven to be obtainable through injunctive relief as ordered by the Courts in the 9th Circuit. Beware the precedent you are amending and setting by permitting this ZEV Investment Plan to be approved in its current form.

Also of importance, Volkswagen should not be able to utilize this settlement for the tax-deductible establishment of a wholly-owned national electric vehicle charging network. Especially not when they have the audacity to claim this “is not a penalty [. . .]” in the introduction of this supplemental filing. What will ARB do when it becomes clear through tax records that this document is chock full of perjury and deceit—that VW is indeed claiming this as a penalty for beneficial tax purposes? Do not permit this blatant perjury to go unmet, and please disclose who permitted this outlandish statement of impunity to be included in this Supplemental Filing so that we, the interested public, may submit proper complaints to the relevant State Bar Association(s), if appropriate.

I’m not even going to dive deeply into how unfair and prejudicial this ZEV Investment Plan is to Hydrogen Fuel Cell technologies as well as the heavy-duty sector in its entirety by VW forcing them all to squabble over the limited Appendix D funds—I believe and hope other commentators will cover that in depth. VW’s anti-competitive business judgment/decision to avoid committing funding for installing even a single hydrogen fueling station under the CA ZEV Investment Plan, to wit during any of the 3 phases, is contrary to the goals of this Consent Decree and California’s own policy directives and environmental goals. Additionally, forcing all light-duty hydrogen refueling stations, each costing \$1-million or more, to share funding with the heavy-duty sector severely

limits the maximum reductions in NOx and other criteria pollutants which are the true aim of Appendix D and most achievable in the heavy-duty sector.

You are the California Air Resources Board. You, as employees and Commissioners, represent one of the most powerful governmental agencies in the world. Do not back down, do not give in, and do not give up. This ZEV Investment Plan is inequitable, unfair, unjust, and straight up lies and deceit coming from a company that has repeatedly shown its proclivity and preference for fraud and anti-competitive behavior. Do not forget what they did and the lies they continued to spew long after their fraud was revealed. If you permit this ZEV Investment Plan to proceed in its current form then the precedent this sets will de-fang the Board for future enforcement efforts. Any self-reporting violator in California from here on out will be able to laugh in your face as they point to this ZEV Investment Plan and say, "Thanks for the tax-deductible investment in my own company's future business model"—and that's assuming the Courts let you enforce SEPs after this chicanery. Alternatively, any efforts to promote sustainable transportation through an SEP in California could henceforth be challenged on the basis they are precluded as potential forms of injunctive relief, which is a strong tactic that entrenched oil majors and OEMs will happily use against you and their zero-emission competition. I know there is a reason CARB, US EPA, and VW avoided calling any portions of the Consent Decree an "SEP" or a "mitigation action", but now that VW has admitted on the record that this is "not a penalty", you must ask yourselves: What is this? That answer is far from justice and it may indeed be the unwitting and unforeseen death knell for CARB's environmental protection and enforcement efforts.

Signed,

A Concerned Californian

First Name: Morry

Last Name: Markowitz

Email Address: mmarkowitz@fchea.org

Affiliation: Fuel Cell & Hydrogen Energy Assn.

Subject: ZIP Supplement

Comment:

As currently drafted, the Supplement omits investment in hydrogen refueling stations (HFS), a stance that is inconsistent with State efforts, the 2016 ZEV Action Plan, ongoing hydrogen infrastructure investments, the eight-state ZEV MOU, and industry efforts to bring many ZEV models to the market. Therefore, FCHEA asks the ARB to maintain its position of supporting all ZEV technologies by postponing the approval of the Supplement, and working with Volkswagen to amend the Supplement to include HFS investment.

Comment:

Our company made submission for a hydrogen fueling infrastructure grant in August 2016 We did not find out till Feb 2017 that we did not win the grant here in Fresno. Our CHIT score was very low in Fresno We even had a business case model for a dual station that would accelerate hydrogen fuel usage in Fresno with commercial fueling such as hydrogen forklifts and hydrogen emergency power service units We have now had to go to an option B scenario to dispense hydrogen We were counting on VW settlement to help us for hydrogen station infrastructure I am encouraging decision makers to take another look at where to dispense the funds Hydrogen should receive monies from this settlement I could list 100 reasons why but this is not the platform to do so
Thank you

Subject: Support Letter for Sacramento Award as Green City
Comment:

To: California Air Resources Board
RE: VW Electrify America, Cycle 1 Investment Plan
The Sacramento Electric Vehicle Association (SacEV), is a 600+ member organization, and as stated by Ron Freund, Chairman of the Electric Auto Association, "... one of the largest and most active EAA chapters in the country."
We strongly support the choice of Sacramento as the first awardee for the Green Cities program for many reasons.....
For years SacEV has partnered with SMUD, car dealers and many community groups to initiate the wider understanding and adoption of these 21st Century mass produced alternatives to traditional polluting choices.
The Sacramento area enjoys unique support from SMUD with strong coordination of educational outreach programs hosted, planned, and staged by SacEV. No other area of the state has this track record of cooperation and effective impact in bringing the understanding of how EVs can improve our quality of life.
The non-profit SacEV has the outstanding history of educational outreach to schools, colleges, businesses, publications and public events to enlighten the public about this new technology.
Even with extremely limited funds, SacEV, members invested over 4000 hours of volunteer time with its partners, put on 55 EV educational events in 2015 and 2016 plus wide ranging activities which included:
3,570 Test drives for people interested in experiencing driving electric.
15,265 One-on-one conversations on whether an EV can work for you.
162 Member owned EVs provided for event support (show and tell) at over 55 events.
Providing educational scholarships for Automotive Technology programs.
Bimonthly public informational events on EV offerings, programs, infrastructure with an opportunity to meet EV industry experts for direct Q & A on "how an EV works for you."
Engaged State Government offices and utilities in

consultation on policy and planning for the adoption and infrastructure needed for EVs.
Working closely with the national Electric Auto Association to share ideas, success strategies and programs that work.
Published several articles not just across the country, but also into Germany, about EV events and activities, along with tips and techniques for holding successful EV events.
Provided SacEV generated public material to train Auto Sales reps with regard to success in the EV sales process.

Co-developed Public Service Announcements highlighting the excitement and pleasure of driving electric.
This past history demonstrates that the Sacramento community has the foundation already in place to develop a further expansive and effective educational outreach program when adequate funding is actually available.

Community Experience in Partnerships for Collective Action:
The following have consistently demonstrated successful collaboration in promoting the adoption of EVs in this area already:

SacEV
SMUD,
Sacramento, Placer, El Dorado and Yolo counties,
Sacramento and neighboring cities,
Sacramento Clean Cities,
Council of Governments,
California Auto Museum,
UC Davis Institute of Transportation,
Air Quality Districts,
Sierra Club,
Auto dealerships,
Sacramento Area Regional Technology Alliance,
ChargePoint, ClipperCreek, and other EVSE manufacturers
Kaiser-Permanente and other businesses,
other local cities/governments in the region

The Sacramento area has a unique, substantial and active history of cooperative efforts between governmental, public, and community groups in promoting community interests in health. The Green City award would allow that history to become a future with a major impact on improving community health and wellness, and extend to broader regions.

Respectfully Submitted,
George L. Parrott, Ph.D., President, Sacramento Electric Vehicle Association
Guy Hall, Chief Strategic Officer, Sacramento Electric Vehicle Association
