Subject: WRI comments on the SB 596 workshop - Low Carbon Cement Standard  
Comment:

I am pleased to submit the attached comments on behalf of World Resources Institute recommending inclusion of a low-carbon cement standard as an important element in California's comprehensive SB 596 strategy. We welcome the opportunity to discuss this approach in more detail with CARB staff and with any interested stakeholders who are following the SB 596 implementation process.  
Thank you,  
Kevin Kennedy  
Senior Fellow  
World Resources Institute

Subject: Public comment SB596-wkshp-Oct20-w  
Comment:

The Center for Biological Diversity appreciates CARB's consideration of various pathways as it develops a plan to decarbonize the cement industry per the mandate in Senate Bill 596 ("SB 596"). We are concerned, however, that CARB may unnecessarily rely on carbon capture and storage ("CCS") as part of its plan, when in fact, CCS is a false solution that overpromises and underdelivers on its greenhouse gas ("GHG") capture potential, all while putting communities and the environment at risk. Instead, CARB should focus on the suite of viable strategies--such as alternative inputs, electrification, fuel-switching, and nature-based carbon dioxide removal--that, when deployed together, could achieve SB 596's both short- and long-term goals for the industry.

Our full comment letter is attached. Please note that we also will upload references cited in this letter in a .zip file titled, "Ctr. Biol Div Refs Cement 11.22.22," for CARB's consideration and for inclusion in the public record.

Comment:

The articles I've been reading about greener. Cement focus on the traditional materials but fail to mention post-processing add-ins that reduce the AMOUNT of cement needed. Prominent here is graphene, an all-carbon two-dimensional molecule that forms super-strong sheets. I know Cemex has been using it with apparent success. Mixed into the final product, grapheme can make the product stronger and lighter at little or no added cost.

Encouraging innovations such as grapheme can do more to reduce carbon dioxide than just tinkering with what now exists. Please give such groundbreaking approaches more attention in your future investigations.

Dear CARB staff,

On behalf of NRDC and RMI, please see attached for our public comments on SB596 - Cement Sector Net-zero Emissions Strategy.

Thank you for your continued work on this and we look forward to working with you and all other stakeholders to reduce emissions from California's cement industry.

Sincerely,

Christina Theodoridi (NRDC) and Ben Skinner (RMI)
