Subject: Comments on: Meeting California's Carbon Neutrality Goals

Comment:

 CARB Q:What other programs administered by CARB could be leveraged or adjusted to support further emissions reductions in the industrial sector?
A:Dramatically increase funding for the FARMER Program.

 CARB Q:What hurdles does California face for decarbonizing the industrial sector?

A: An "all-electric" approach is not practical for much of the rural counties in CA. It's just too far to a sufficient and efficient set of recharging stations.

CARB Q:How can CARB help overcome these hurdles?

A: Focus on what's practical and incentivize off-road and some rural on-road equipment (FARMER Program) to have latest emission technology.

Subject: Feedback on webinar

Comment:

Overall, the webinar was helpful and informative. However, too little attention was paid to technical issues. The emphasis was on policy approaches to encourage decarbonization in the industrial sector. There was little discussion of the challenges to this decarbonization and only one slide mentioned (without any detail or discussion) what decarbonization actually looks like. I believe that understanding the technologies available or in the pipeline, the challenges to their implementation, and their co-benefits, is a prerequisite for good policymaking. I would suggest devoting more time to the technical aspects. The policy approaches implemented in other jurisdictions could be cut to make time; it was interesting but not critical.

There is one technical aspect in particular that should have been explored. It is highly controversial yet seems embedded in many of the technical approaches: the carbon neutrality of biomass. This is worth a full discussion on its own.

Subject: Carbon Neutrality

Comment:

We recommend California ARB adopt IPCC AR5 20 year GWP for greenhouse gases and include emissions of Black Carbon from open field burning (forest and brush fires). If CARB broke from the UNFCCC Politically motivated and negotiated standards and follow the scientific consensus of IPCC it would have a profound impact on the Community and drive adoption of more recent Scientific findings.

Subject: CLFP comments on Carbon Neutrality Goals

Comment:

Q: What other programs administered by CARB could be leveraged or adjusted to support further emissions reductions in the industrial sector?

One of the most innovative programs has been the Food Production Investment Program (FPIP). Focused solely on CO2 reductions, this program should become the model for all industrial incentive programs going forward if the state expects to meet its emission reduction goals. CARB should advocate for continuous funding for FPIP.

Q: What hurdles does California face for decarbonizing the industrial sector? How can CARB help to overcome these hurdles? Lack of new or emerging technologies prevent additional significant gains in emissions reductions for food processors. Additional research into the current status of available technologies and emerging technologies for industrial food processors needs to be funded. For instance, understanding the availability of technologies will allow for a fine tuning of the emission reductions on a sector by sector basis under the cap-and-trade regulation.

Bottom line, more incentives/grants for industrial food processors will be needed if additional significant reductions are expected.
