Subject: Comments Concerning Cap-and-Trade Program Rules

Comment:

October 5, 2015

Ms. Rajinder Sahota, Chief
Climate Change Program Evaluation Branch
Industrial Strategies Division
California Air Resources Board
1001 I Street
Sacramento, CA 95814

Re: Comments Concerning Cap-and-Trade Program Rules

I appreciate the opportunity to provide comments regarding AB 32 rule changes that are needed to improve the efficiency of the cap-and-trade program, streamline its complex rules and avoid adverse outcomes. The current Holding Limit and Limited Exemption rules may encourage allowance market manipulation, rather than preventing it, and will likely lead to increased market volatility.

As the California Carbon Allowance (CCA) supply/demand balance tightens after 2018, allowance prices could increase very rapidly, exceeding the third-tier allowance price containment reserve price.

These effects are described in the attached paper and analysis. Post-2020 reductions will also experience volatility under current rules.

Experience from emission trading programs around the world provides several basic lessons:

1. Over-allocation of emission allowances at the beginning of cap-and-trade programs has led to low initial allowance prices, while at the same time enabling participants and regulators to refine procedures and market rules, in order to achieve long-term market goals. As emission caps become more binding, allowance prices rise.

Like other programs, California's annual caps on greenhouse gases (GHG) and allowance allocations have kept CCA prices close to each year's specified price floor.

2. Emission markets (and other thinly traded markets) have exhibited significant volatility accompanied by rapidly increasing prices that can be several times higher than prior prices.

Both RECLAIM and the U.S.E.P.A. national SO2 allowance program have experienced significant price spikes. In today's cap-and-trade program California compliance entities have acquired allowance banks, subject to holding limit and limited exemption rules, in order to ensure compliance and accommodate year-to-year variability in emissions and related energy markets. Undoubtedly, between 2018 and 2030, the CCA supply/demand balance will tighten periodically and, under reasonably likely market conditions, allowance prices could rise rapidly, as has happened in other commodity markets, especially those with a limited number of participants.

3. Increasing the number of market participants and the size of the allowance markets enables more efficient allowance trading that reduces overall compliance costs and increases incentives for new and improved technologies. Of course, this is why California has

successfully expanded its program to include Quebec and, hopefully, other future partners. This is also why the EPA's Clean Power Plan encourages regional programs.

Several of ARB's existing market design elements and rules could reduce trading and cause higher, more volatile CCA prices. These are:

1. the "one-way" Compliance Account from which allowances may not be removed, reducing the supply available for trading,
2. the limited quantity of allowances in the Allowance Price Containment Reserve, potentially allowing uncapped prices, if the reserve is exhausted, and
3. rules that limit allowance ownership (Holding Limits [HL] + Limited Exemptions [LE]). Limited Exemptions are required by high-emitting firms that have annual emissions greater than the HL, but LE are created only when a firm irrevocably transfers CCAs into its Compliance Account.

Experimental research and auction simulations have found that tight holding limits can substantially lower the number of allowances available for trade, lowering liquidity, increasing volatility, and impairing the ability of traders to smooth prices over time. Hence, ARB's current rules may encourage market manipulation, rather than prevent it.

In order to make the AB 32 program more efficient and to provide a better model for regional applications under the Clean Power Plan, I recommend that the Air Resources Board:

1. Add a firm price ceiling, i.e., a hard price cap, above the tier 3 Allowance Price Containment Reserve price, thus, preventing unlimited price increases, if the limited number of APCR allowances is exhausted.
2. Remove the "one-way" restriction on the Compliance Account to allow trading of surplus allowances that are otherwise trapped in these accounts. This would enable more efficient trading, especially when the CCA supply/demand balance tightens.
3. Modify the Holding Limits and Limited Exemption rules by raising the fixed annual Holding Limit or adjusting it proportionally for the few well-known, closely monitored, high-emitting firms, in order to permit these firms to trade surplus allowances. The current holding limit formulas were developed and applied to markets for more widely-traded commodities, and the effects on market performance are evaluated periodically.
4. Evaluate the use of pivotal supplier tests and concentration ratios to examine current and alternative holding limits under projected emission caps and future market conditions. This will provide a greater understanding of the effects of these limits, which were derived for larger established commodity markets, and could suggest appropriate revisions to the holding limit rules. These proposed rule changes will help ensure that California's cap-and-trade program is successful and robust and will provide an improved market model that can be adopted regionally, rather than becoming a restrictive market that might fail due to particular overly prescriptive and complex rules.

Sincerely,

/S/

Andrew J. Van Horn, Ph.D.

Subject: Powerex Comments on Potential Changes to Cap-and-Trade Program

Comment:

To the various ARB staff-members identified as contacts on ARB's October 2, 2015 PowerPoint presentation re the Cap-and-Trade Program:

I write on behalf of Powerex Corp. (Powerex) in response to ARB's call for stakeholder comments in its October 2, 2015 workshop on potential changes to the Cap-and-Trade Program. Powerex offers the attached comments focused on potential changes to regulatory provisions bearing on the RPS Adjustment and the reporting of direct deliveries of electricity. Powerex sought to upload these comments to the web portal on ARB's website this afternoon shortly after 5 pm, but found that the web portal for comment submission had been taken down. We would very much appreciate if one of the staff-members in this group please confirm receipt and acceptance of the attached comments on behalf of ARB.

Very best regards,
Drew Mayer
