Subject: LCFS Phase-out of CCS/EOR

Comment:

Below is a suggestion regarding the CARB staff alluding to a future "phase-out" of CCS/EOR under LCFS.

Given that CCS with EOR in California (particularly CO2 EOR) will yield a lifecycle oil carbon intensity far below any native or imported crudes, the very last barrel of crude refined/utilized in California should come from in-state CCS with EOR.

Any phase-out of CCS with EOR from LCFS should be based on actual crude demand/usage in California rather than forecasts subject to political and/or other influences.

Comment 4 for Low Carbon Fuel Standard Public Workshop to Discuss Potential Regulation Revisions (lcfs-wkshp-oct20-ws) - 1st Workshop.

First Name: Justin
Last Name: Friesen
Email Address: justinf@bluesourcecan.com
Affiliation: Bluesource Canada

Subject: Approach to quantify carbon intensity of mixed feedstock digesters
Comment:

To whom it may concern,

Regarding your request for comment on how to appropriately quantify the carbon intensity of a mixed feedstock digester, Bluesource has a proposal on how to achieve this. We believe the following approach is conservative, reduce risk of overestimating credits, avoid crediting ineligible feedstock, do not overburdening digester owner/operators with testing or metering requirements, and lower risk of credit invalidation. The approach is as follows:

Approach:

Assuming there is one feedstock that makes up the majority of the feedstock, and any other feedstocks fall into an eligible category under the LCFS

1. Calculate the CI of the main feedstock (>75% of total feedstock by mass) using conventional methods (i.e. using simplified calculator)
2. Perform biomethane potential (BMP) test on one or both feedstocks to determine the quantity of gas produced by each feedstock. Tests can be performed once or twice annually.
3. Assume the temporary carbon intensity for the secondary carbon intensity (i.e. 45 g/MJ for WWTP sludge, -150 g/MJ for dairy manure
4. Apply for fuel pathway validation under a tier 2 pathway

Requiring a digester operator to meter volatile solids for each feedstock, fossil fuels for each feedstock's handing and processing is extraordinarily onerous. This would undoubtedly would deter facilities and individuals from developing digester projects, thus slowing California's progress towards reaching its 2030 GHG reductions targets.

Regards,
Justin Friesen

Subject: Default Grain Transportation Data

Comment:

I am inquiring as to whether ARB will consider changing the number of states which can use default distances for grain receipts in CA-GREET 3.0 pathway submissions.

The 9 states which currently receive this allowance were determined based on an ANL study from 2003. Over the past 17 years, states like Kansas and North Dakota have made great strides in improving their farming practices and grain production. Kansas, in particular, is now the 6th largest corn producing state and the largest producer of grain sorghum. North Dakota is now using corn to diversify their crop rotations for healthier soil and improved yields and is easily in the top 10 producing states.

Ethanol producers in Kansas and North Dakota receive thousands of grain trucks every month. Non-Midwestern States have to track mileage and origination data on all their grain receipts whereas Midwestern States may need to track some origination data to ensure compliance but can largely use default data.

As we get into a more intense reporting and compliance atmosphere, ethanol producers in non-Midwestern States seem to face a more rigid regulatory hurdle than those grandfathered into "Midwestern States" status. I would ask that ARB update the definition of a "Midwestern States" to reflect more recent corn/grain production data so that ethanol production facilities in major production regions can be treated equally.

Subject: Support for NTIC

Comment:

Since I am not sure my letter with logo uploaded, here is the text:

October 26, 2020

Rajinder Sahota
Division Chief, Industrial Strategies Division
California Air Resources Board
1001 I Street
Sacramento, CA 95814

Dear Ms. Sahota:

I am writing to you to express support for the Novel Technology Investment Credit (NTIC) program that was presented by Virent and Marathon in the Low Carbon Fuel Standard (LCFS) Public Workshop on Oct. 15, and Aequor Inc. encourages CARB to move the NTIC program into the next rule making process for incorporation into the LCFS.

Aequor Inc is a woman-owned small business located in JLabs-San Diego. Our novel "green," non-toxic chemical treatments were validated by DOE to boost algae and yeast biomass production by up to 40% in half the time, without the need for antibiotics or antimicrobials. This breakthrough saves energy, water and labor costs, and directly increases our customers' margins and profitability in the low carbon fuel sector in California.

Aequor Inc supports the NTIC program because we believe it is the correct approach to advance the growing need for low carbon fuels in California. It will help companies, like ours, bring new technologies to improving low carbon fuels to commercial scale. We believe the program is correctly structured to limit the LCFS programs risk in that investors will need to take the upfront risks to demonstrate the new technology is commercially and operationally viable. Additionally, administrative controls to limit the number of credits awarded to between five and seven and a half percent of deficits will help to ensure existing investments are not placed at a disadvantage and can be implemented under the existing CARB administrative infrastructure with no cash outlays by the State of California. We believe that the NTIC program will bring significant additional investments into new low carbon fuels technologies, resulting in significant increases in production of low carbon fuels.

My company aims to service the growing global market for our biomass boosters, improving the feasibility and profitability of algae and seaweed cultivation, biomass fermentation, and job creation in our home State of California.

For all these reasons, Aequor Inc encourages you to move the NTIC program forward in the CARB rule making process.

Best Regards,

Marilyn J. Bruno, Ph.D., J.D.

Subject: Comments on NTIC proposal

Comment:

I am writing to you to express support for the Novel Technology Investment Credit (NTIC) program that was presented by Virent and Marathon in the LCFS Public Workshop on Oct. 15, and offer my encouragement that CARB move the NTIC program into the next rule making process for incorporation into the LCFS.

As a former member of the corporate strategy group with Tesoro, I have been following the LCFS program since its inception, and have developed compliance strategies (including capital investment) from the standpoint of an obligated party. I continue to follow the LCFS program closely, in my role as a member of the Board of Directors of Ensyn Corporation, and as an advisor to California Ethanol and Power.

I support the NTIC program because I believe it would be a good structure to grow the supply of low carbon fuels for use in California. It will help companies bring new technologies for low carbon fuels to commercial scale by providing additional incentives to encourage companies to take the economic risks to make large investments to increase the production of these fuels. In addition to promoting the development of new technologies, this structure could be equally valuable in providing incentives for more proven technologies which have not yet been deployed commercially in California due to other technical or financial challenges. I believe that the NTIC program would bring significant additional investments into new low carbon fuels technologies and result in significant increases in production of low carbon fuels.

For all these reasons, I encourage you to move the NTIC program forward in the CARB rule making process.

Subject: LCFS Recommendation from Sustainable Aviation Fuel Producer Group

Comment:

This comment is submitted on behalf of the Sustainable Aviation Fuel Producer (SAF) Group which includes many of the leading developers and producers of SAF including Fulcrum BioEnergy, Gevo, LanzaJet, Red Rock Biofuels, Velocys, and World Energy. This comment recommends that CARB revise the benchmarking table in the regulation (Table 3) for Alternative Jet Fuel (AJF) in order to comparably incentivize AJF and renewable diesel from a California policy perspective. The attached letter describes the requested change in detail. This policy modification is necessary to expand supply of AJF to meet California's policy goals.

Thank you for the opportunity to submit this comment. Please contact me with any questions, or to schedule a meeting to discuss this recommendation.

Best Regards,

Graham Noyes
Noyes Law Corporation

Subject: Comment by Fulcrum BioEnergy RE: Low-CI Power Sourcing for Facilities

Comment:

Attached please find the comment letter of my client, Fulcrum BioEnergy, regarding low carbon intensity process energy (Low-CI Power). This comment recommends that CARB authorize low carbon fuel production facilities to acquire Low-CI Power via firm power purchase agreement (PPA). The current requirement of a direct behind the meter connection is simply not feasible for many facilities. Allowing the sourcing of Low-CI Power via firm PPA would increase the utilization of renewable energy and decrease demand for fossil fuels, thereby facilitating California's policy objectives.

The attached comment describes this recommendation in additional detail. Please contact me for any questions or to schedule a meeting regarding this recommendation. Thank you for the opportunity to submit comments to this rulemaking.

Best Regards,

Graham Noyes

Subject: BioChemical Methane Potential Values for Dairy and Swine manure

Comment:

Please see the attached document that addresses our concerns regarding the accuracy of using a specific number for the biochemical methane potential of Livestock manures.

We feel this number is based on older science and needs to be adjusted to represent a more scientifically accurate process current with the advancements in science and technology in both the livestock sector as well as the biogas sectors.

First Name: Antonio

Last Name: ValleNeto

Email Address: antonio.valleneto@bunge.com

Affiliation: BUNGE

Subject: soybean farming energy factor in GREET

Comment:

The soybean farming energy in GREET comes from a USDA survey and is the national average. The original USDA data source reports the values at the state level.

Would CARB consider the use of the state level data to better reflect the actual carbon intensity of specific soybean oil producers if the soybean oil producer was able to document where the soybeans were grown?

In concept this is the same as the use of regional electricity grids.

Thanks.

Subject: Carbon Dioxide Utilization from Ethanol Plants

Comment:

Please See Attachment:

Pinal Energy is requesting CARB to consider how carbon dioxide (CO₂) from ethanol fermentation can displace fossil CO₂ in commercial applications and lower the carbon intensity (CI) score for an ethanol fuel pathway. CO₂ captured from industrial processes is used in many industries and should be considered as a co-product for fuel pathways where it can be showed to displace the use of fossil carbon dioxide. Adding CO₂ as a co-product will allow the merchant CO₂ market to effectively compete with that of the captive CO₂ market.

Subject: Request to Address Alternative Jet Fuel Crediting in LCFS Rulemaking

Comment:

The attached letter is submitted on behalf of the San Diego County Regional Airport Authority (Airport Authority). One of the key factors limiting Alternative Jet Fuel (AJF) use is the total LCFS value that AJF producers receive, when compared to producers of on-road alternative fuels. Therefore, the Airport Authority respectfully requests that the California Air Resources Board address this disparity of LCFS credit policies, as part of its upcoming rulemaking process.

Thank you for your time and consideration.

Comment:

Dear CARB Staff,
Thank you for this opportunity to contribute comments to this next Rulemaking. We are proposing a credit mechanism that takes into account the substantial potential for carbon sequestration in land.

We appreciate your consideration of this proposal.
Best Regards,
Chris Roach
President, Roeslein AE

Subject: Comments for LCFS workshop-Oct20

Comment:

1) Clarity on the 3rd Party and Engineering Review. There needs to be more discussion on the qualifications required for this step as there is a very small pool of resources that meet the professional certification and the conflict of interest restrictions.

2) Clarity on the overall project development plan. There needs to be provided a clear workflow or documentation as to when CARB needs or does not need certain site specific data requirements. For example, when in the process does the characterization well need to be drilled or when does CARB expect to have Seismic acquisition completed.
