Documentation of Tier 1 Application Input Data: Chemical, Enzyme and Yeast Use

For the DGS yield/gallon of ethanol production, what documentation will be required?

The calculation of DGS yield requires an accurate measure of the moisture in the DGS to calculate the bone dry yield, what documentation requirements will there be, if any, for the moisture?

DGS is often shipped by the ethanol producer by the truckload. Should documentation of each shipment be required, there will be an enormous amount of documentation and there will still be an issue of documenting the starting and ending inventory in a given period.

It is suggested that an attestation of the yield, in lieu of detailed documentation, be permitted as a means of documenting the DGS yield. Attestation could either be by the producer or an independent, third party.
