

ACF Rule

Good morning CARB members. My name is Emily Navarro. I'm from the community of Compton in the LA area. Growing up I saw factories and fleets constantly around my neighborhood and never thought much of it. It was a common occurrence to see trucks pass by our small street, smell the permissions, and pot holes left behind due to these trucks. I grew up thinking closing our classroom doors to try and block the smells coming from the factories right across the street was normal. It wasn't until I joined East Yard that I fully realized how much these trucks and businesses impacted our well being. I urge board members to revisit and improve this rule. This issue continues to impact our community's health and it's not getting any better. In fact, it's getting increasingly worse. In my neighborhood I've noticed the increase of health issues. My own nephews have respiratory issues. ~~More~~ More and more often I get news that another child ~~has~~ from the neighborhood has cancer. ~~My sister's son~~ I live a block away from Jefferson Elementary where one of my sister's students, a 1st grader recently got diagnosed with cancer. A neighbor that lives close to the school also recently had one of her grandsons diagnosed with cancer. This is a serious issue that is impacting the lives of innocent civilians. So, I urge for this rule to be stricter with its regulations. ~~Even~~ Lowering qualifying fleet size overtime even if it's overtime will be of help. There needs to be a change and fast. That is all, Thank You.
