

## PARTNERSHIP FOR ECONOMIC DEVELOPMENT

October 25, 2018

Mr. Mark Williams,

The Go Lake Havasu tourism bureau and the Lake Havasu City Partnership for Economic Development support Electrify America's plans to invest new DC Fast Charging stations to connect environmentally progressive drivers to Lake Havasu City, Ariz.

Our community was recognized, out of 350 communities nationwide, for our future preparation and received a \$2 million prize in the America's Best Communities contest due to public engagement for its Vision 20/20 plan to culturally, economically, and environmentally plan for a sustainable future.

Electrify America's commitment to invest in an environmentally sound transportation network and to educate consumers of sustainable transportation is admirable.

Our community was honored to be chosen as a destination for Electrify America's Cycle 2 highway and regional route plan for new DCFC stations. The infrastructure will assist our country's consumer influencers in sustainable practices to be able to easily travel to scenic destinations without sacrificing their environmental ethics.

We look forward to working with them on their vision, which aligns with ours.

Sincerely,

Terence Concannon  
President/CEO Go Lake Havasu tourism bureau

James Gray  
Partnership for Economic Development
