

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Janet Maker,

90024, CA

They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Jim Szewczak,

94062, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Arnaud Dunoyer,

90291, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Rosa Gamazo,

90292, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

John Rafter,

90660, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Joel Stoup,

91104, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Denise Baca,

91724, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Britt Colton,

92116, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

L.D. Scott,

90039, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Pat McFarland,

95468, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Karen Greenberg,

95811, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Aaron Severson,

90064, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Donna Forst,

95409, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Stephen Andersen,

94404, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Rachel Carey,

92054, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Y. Armando NIETO,

94611, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Kevin Branstetter,

95703, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Matt Sorgenfrei,

94121, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Aileen Sander,

90403, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Michele Pedrini,

91007, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Dan Esposito,

90266, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Brian Dawson,

92603, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Eric Zeiler,

95501, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Lawrence Fait,

92504, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Roy Rosenblatt,

91403, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Wayne Matteson,

92203, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

patric kearns,

95476, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Marilyn Traugott,

96001, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Javier Flores,

92121, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

William Ctist,

94044, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Jill Marrington,

73132, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Richard Rawson,

95818, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Mary Ann Di Flaviano,

93720, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

scott maretti,

94611, CA

They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Michele Halligan,

95482, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Matthew Coleman,

94611, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Kaylah Sterling,

94608, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Patty Garcia,

94610, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Margaret Hodges,

94606, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Andre Pessis,

94925, CA

They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

roger lema,

94541, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Ingrid Newstadt,

90065, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Danette Johnson,

92264, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Holly Hovore,

91354, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Anh Clemens,

95120, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

George Ball,

90301, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Catherine Newell-Hanson,

90016, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Tami Perkins,

91364, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Laurel Cameron,

90277, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Bob Schildgen,

94703, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Timothy Moder,

94703, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Shelley Carlisle,

94947, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

S Burcin,

92029, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Shirley Azevedo,

93654, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Karen Miner,

95762, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Nicholas Hermosillo,

92346, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Michael Hazelton,

95112, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Patricia Ritter,

91423, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Valerie Veneziano,

90640, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Sheryl Rose,

94702, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

George Gorohoff,

95123, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Gary Maloney,

92024, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Scott Barlow,

94087, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Julie Bohnet,

95490, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Fr. Stewart Wilber,

94114, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

George Nickle,

90064, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Elizabeth Orser-Cataldi,

95065, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Terri Trammell,

92675, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Dionne Neish,

90046, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Vanessa Cast,

90262, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Donna Lewis,

91401, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Ross Heckmann,

91006, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Jo Cole,

90049, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Patricia Shortt,

92118, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

tim barkwill,

90621, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Laurel Rutz,

92081, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Linda Rasmussen,

90064, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Tim Miller,

95476, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Joseph Blum,

94110, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Laurie Rittenberg,

91604, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Susan Moynahan,

95119, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Gail McCleary,

95519,

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Nancy Nanna,

95470,

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Dolores McCue,

92037, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

jeanne sumner,

95454, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Maureen Griffin,

94022, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Brian Jeffery,

92536, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Sarah Mcneal,

94061, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Shea New,

92260, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Karen Kennedy,

90291, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

christa marshall,

94901, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

LeRoy Lafferty,

92115, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Danny Castori,

94517, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Jacqueline Silk,

91352, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Lu Carpenter,

94131, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Bethany Sanders,

92056, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Jody Loeffler,

94703, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Mark Giordani,

91303, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Maggie Hughes,

94704, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Greg Winton,

92557, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Jack Parker,

93405, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Kathy Stewart,

91001, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Lisa Ann Kelly & Family,

93101, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Mike Kelly,

92648, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Genevieve Yuen,

94131, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Carolyn Pettis,

91350, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Deanna Knickerbocker,

95050, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Susie Duff,

90264, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Steven Hobbs,

94070, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Michele Coakley,

95670, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Dan Larson,

90290, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Deborah Lee Chill,

92399, CA

They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Steven Berge,

95843, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Harold Broadstock,

95301, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Feliz Samson,

91342, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Mary Burch,

95422, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Judy Collins,

94402, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Leslie McDowell,

90035, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Don Wheaton,

94591, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Adriana Guastavino,

95327, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

terance tashiro,

90045, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Jesse Croxton,

90291, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Susan Boyack,

95476, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Pegalee Benda,

95476, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Dawson Pan,

91800, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Ellen Caprio,

92131, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Karen O'Rourke,

91304, CA

If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

John Alexander,

92057, CA

Protect our air: Say NO to tropical forest offsets

To the Air Resources Board:

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these tropical forest offsets never are accepted into California's carbon trading system, or adopted by out-of-state entities like the International Commercial Aviation Organization (ICAO).

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change. If the ICAO were to adopt tropical forest offsets, it would allow airline emissions to continue growing while putting tropical forests into the market over the protests of local communities. Its totally unacceptable.

Tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating indigenous and human rights, and are impossible to police across national borders. California should not be encouraging them through the endorsement of the TFS.

Sincerely,

Cathy Carr,
